

Liquidated NC Credit Union Issues Notice

The process of liquidating the N.C. Educators Credit Union, Inc. will end on May 31, 1974, by action of the board, 1-5-74. The remaining share holders, who have not at this time, sent in their share account books, or a statement about their share balance, with a self-addressed envelope stamped, will please do so on or by May 1, 1974. This will make it possible for us to complete settlement of all shares and other business, by or before May 31, 1974.

If the share holder is deceased, the administrator should immediately contact the state office at 131 1/2 E. Hargett Street, Raleigh. After May 31, 1974 unless this is extended by the Board the remaining delinquent loan papers, will be handled by the State Credit Union Division, including all unclaimed shares. Persons with delinquent loans after the closing date, must deal directly with the State Division. They should not take the risk of having their credit seriously damaged by not clearing up their loan balanced by or before May 31, 1974. The cost of collecting these notes after May 31, 1974, will be added to the total amount reported to the State Agency by the N. C. Educators Credit Union, Inc.

The Board expresses thanks, to the share holders with large share accounts, who did not force share settlement earlier, thus making a creditable closing possible at this time.

BIG INVESTMENTS

The investment in mechanical tobacco harvesters in the next five years is figured at about \$85 million with another \$75 million to be invested in bulk curing barns. Both the mechanical flue-cured harvester and the bulk barn are products of research at North Carolina State University and the N.C. Agricultural Experiment Station.

BUYING FOOD

Consumers spent about \$134 billion on foods produced by U.S. farmers last year. That's a yearly increase of \$18 billion. The farm value of that consumer expenditure was only \$51 billion.

Warm Weather May Reveal First Sign Of Termites; Treatment Recommended

The arrival of spring should be an alert for all homeowners to be on the lookout for the first signs of termites.

The warm weather will cause the flying or reproductive members of termite colonies to swarm and start families of their own in a new location.

If that location is your home, you had better call a reputable exterminator. Although termites work slowly, they are persistent and will not go away by themselves. The damage they do over a period of time can be serious and expensive.

Dr. Harry B. Moore, North Carolina State University entomologist, suggests having your home treated by a licensed pest control operator at the first sign of termites. But take time to shop for the best job for the price. Be sure the operator you use is licensed.

Treating the house yourself isn't recommended. "I don't think it is practical for homeowners to try to treat for termites themselves," Dr. Moore said. "A good job is required and that can only

be done if a person knows where and how to treat and has the tools needed for the job."

First, determine as best you can that the insects you see are actually termites and not ants. Termites and ants have these distinguishing differences: The ant's front wings are longer and larger than its hindwings, whereas the termite's wings are more uniform. Ant wings are transparent and aren't easily pulled off. Termite wings are grayish and easily detached. The ant has an hour-glass waist, while the termite's body is blocky with no apparent waist. Ants have elbowed or bent antennae. Termites have straight antennae, or feelers.

Termites require moisture to survive. They live in the soil and often build a network of tunnels to reach the wood under a home. One of the most frequent sources of entry is through the soil of a dirt-filled concrete porch. If your home has one of these, it is very susceptible to termite infestation.

Dr. Moore cautioned. Spring is about the only time you will be able to see the termites. They will stay hidden except when they are forming new colonies.

If you didn't see any swarming around your home this spring and want to check further for infestation, look for tell-tale signs such as the little soil tubes on foundation walls. Break the tubes and look for the worker termites. These are small white insects without wings. These are the members of the family that do all the damage to the wood in the home.

Suspect termites at any point around your home where wood touches the ground or where the foundation meets the wood parts of the house. Any place where you can break the wood surface easily with a sharp or pointed instrument may be harboring termites.

Don't take any chances. Dr. Moore suggests. Have your home treated by a licensed exterminator, after doing a little shopping for the best job for the money.

NO MORE SNAG IN SHAG RUGS WITH NEW CLEANING METHOD

Even white wall-to-wall carpeting in a sooty, city apartment is a cinch to keep clean and bright with new Spray 'n Vac, the no-scrub rug cleaner that sprays on in minutes and dries in about one hour, ready for vacuuming.

No wonder shag carpets and rugs are so popular. Their tousled, long yarns going every which way provide an exuberant and charming background for both modern and traditional room settings—and yet they seem to thrive on hard wear and demand minimal maintenance.

Shags surpass all other carpet textures in hiding wear, soil and even spills—and homemakers who demand easy upkeep are turning in ever increasing numbers to shags.

Eventually, though, even the best soil-hiding shag carpet needs more than ordinary vacuuming to remove the airborne greasy dirt and soil that dulls the color, and a cleaning is in order.

But, ironically enough, the shag carpet that thrives on hard wear

must be handled gently when being cleaned, to avoid matting down or tangling those long yarns. But how to clean a carpet with no spinging or scrubbing, either by hand or machine?

A new product, Spray 'n Vac, from Glaxorenc, does the job, gently and thoroughly with a new shampoo technique that is formulated to solve the shag cleaning problem. Spray 'n Vac sprays on in minutes and dries in about one hour, ready for vacuuming—with no scrubbing or spinging. It's that easy—and leaves carpets clean again, because it removes that dulling film of greasy dirt.

And, best of all, the shag carpet is not only lush and insouciant as before, with no matting or knotting of the yarns, but springier, brighter and fresher.

JODY CARR COMMENTS

from the Car Care Council
IN CAR PARTS, CLASS WILL SHOW

Buying replacement parts for a car can be a dilemma. Should you buy "good," "better" or "best?" Take tires, for example. With various grade levels within many brands advertised in most newspapers on any weekend you might find prices ranging from \$20 to \$40 each for tires to fit your particular car. It can be the same width of choice with shock absorbers, batteries, mufflers, brake jobs and so on down the line. Here are a few thoughts to help you sort out the confusion and come to a decision.

Judy Carr

- 1) COST PER MILE.** Will a twice as expensive part last twice as long? Not necessarily, but you can expect it to last a lot longer. Life expectancy is only part of the bargain, however. How about:
- 2) FUNCTIONALITY.** Will it be a safer tire? Will it be a stronger battery in zero weather or a firmer shock absorber when roadability becomes critical? Will the better muffler and its guarantee both sound better and perform better? There are a lot of product advantages to consider beyond dollars and cents. Not the least of these is safety, on which you cannot place a price tag.
- 3) YOUR TIME.** That has a value, too. If the more dependable part helps eliminate one service call or visit to the shop, it may have made up for its added cost and then some.
- 4) SATISFACTION.** Isn't it good to know your car has been tuned with the best of parts and equipment, even though you had to lay out a few extra dollars to get it done "right"? Wouldn't you prefer to ride in a car whose body and paint work were done with a touch of craftsmanship rather than with a hedge hammer and a wire brush?
- 5) RESALE VALUE.** Even if you plan to sell or trade your car within a matter of months, it is likely to pay off if you buy better service and parts. This is especially true when you're selling to a private party. If you can show receipts for recent purchases of top-of-the-line replacement parts it's easier to get those last few dollars for your car. In fact, the old car might take on such a superior personality that you'll just decide to keep it for a while longer.

There can be an impressive dollar value on that decision.

Things You Should Know

Rudolph Dunbar

1907

IN BRITISH GUIANA, HE ENTERED THE MILITARY BAND AT THE AGE OF NINE! HE STUDIED IN NEW YORK, PARIS AND VIENNA, CONDUCTED SOME OF THE WORLD'S LEADING ORCHESTRAS—IN 1948 HE BECAME CONDUCTOR-IN-CHIEF OF THE BERLIN PHILHARMONIC! HIS FAMOUS "TREATISE ON CLARINET PLAYING" IS A STANDARD WORK.

TELL ME

WHAT IS THE ORIGIN OF THE PHRASE "DEAD AS A HERRING?"

SINCE HERRINGS EXPIRE ALMOST INSTANTLY AFTER THEY ARE TAKEN OUT OF WATER IT IS RARE FOR A FISHERMAN TO SEE A LIVE ONE! HENCE "DEAD AS A HERRING" HAS COME TO DENOTE ANY LIFELESS OBJECT!

ARE LIGHTNING FLASHES EVER PETRIFIED?

YES..... FOR EXAMPLE, PETRIFIED LIGHTNING IS FORMED IN LOOSE SAND WHERE THE DISCHARGES PENETRATE... THUS FUSING THE SAND INTO GLASS TUBES!

IS THE KIMONO..... TRADITIONAL GARMENT OF JAPAN... WORN ONLY BY WOMEN... OR BOTH MEN AND WOMEN?

THE KIMONO.... IN JAPAN... IS WORN BY BOTH MEN AND WOMEN!

DOES A SHARK GROW A NEW TOOTH AS OFTEN AS IT LOST ONE?

YES! SHARKS GROW AN UNLIMITED SUPPLY OF TEETH!

YOUR MONEY'S WORTH

by Sidney Margolis

HIGHER-WATTAGE BULBS ACTUALLY GIVE MORE LIGHT FOR LESS ELECTRICITY. ONE 100-WATT BULB PRODUCES 1750 LUMENS. TWO 60-WATT BULBS PRODUCE A TOTAL OF ONLY 1720. LOOK AT LABELS ON BULBS FOR DATA ON LIGHT OUTPUT AND LIFE. ALSO KEEP IN MIND THAT FLUORESCENT LIGHTING IS 3 TO 5 TIMES MORE EFFICIENT THAN INCANDESCENT.

ORDINARY BULBS (750-1,000 HOURS) REALLY ARE MORE EFFICIENT THAN SO-CALLED LONG-LIFE BULBS (2,500 HOURS), SO USE LONG-LIFE BULBS ONLY FOR HARD-TO-REACH PLACES OR AREAS WHERE YOU DON'T NEED MUCH LIGHT.
