What It is and How It operates.
WASHINGTON, August 2.—The indication balance used by Prof. Bell and Taintor, in experiments made this morning for the purpose of ascertaining the location of the ball in the President's body, differs very materially from the apparatus with which they began experiments several weeks ago. Important modifications and changes have been made in the shape, size and

arrangement of induction coils. A small clock, which was a part of the original apparatus, has been dispensed with and a condenser has been introduced into the primary circuit. The result of these modifications and improvements is great, and which, although not essentially new in principle is more sensitive to small masses of metal at a distance and better adapted to the requirements of military surgery than anything of the kind hitherto devised. The apparatus in its present improved form consist of two flat coils, about 4 inches in diameter and 1½ inch in thickness, of insulated copper wire, a battery, a condenser, an interruptor or current breaker, and a telephone. The ends of the primary or inducing coil are connected with the poles of the battery, and in the same circuit are the condenser and small interruptor, whose vibrating tongue opens and closes the circuit with great rapidity. The ends of the secondary coil, in which the current is to be induced, are carried to the binding posts of the Bell telephone. When connections have all thus been made, the secondary coil is laid on the primary or inducing coil, so that their respective circumferences exactly coincide; the circuit breaker is then set in motion and the rapidly interrupted current through the primary coil in-duces another current of higher inten-sity in the secondary coil, and as it does so a loud musical tone is heard in the telephone with which the secondary coil is connected. As long as the current is maintained and the circumferences of the two coils are kept in exact coincidence, the musical note in the telephone does not change its pitch or ferences no longer correspondend, the intensity of musical tone is diminished. and just in proportion as centres of the flat coils are separated by greater or less distance, the intensity of the musi-

cal tone is lessened or increased. When the upper coil has been slid over the lower so that they simply overlap the centre of the one corresponding nearly with the point or circumference of the other, the musical tone in the telephone ceases. If the upper coil be pushed a laps, still less tone is again heard. By delicate manipulation it is possible to adjust the centres of the overlapping coils at such distance from each other that a perfect balance is brought about and when this is the case the telephone makes no sound whatever. The centres of the overlapping coils cannot then be moved either toward or away from one another without causing the telephone to break its silence. When the coils are thus balanced and the telephone, it is found that what may be called the area of coincidence, or in other words, the area of overlapping parts of two flat coils has become highly sensative to the approach of metal and manifests its sensitiveness by a low note in the telephone. low note in the telephone. As long as metal is kept away from this area the telephone will remain silent, but if lead for example is brought within the distance of 4 or 5 inches from the over-lapping parts of the coils, there may be heard in the telephone a faint but

clearly perceptible note, which grows louder and louder as metal approaches the sensitive surface, and throws the coils more and more out of balance, it will readily be seen that under the guidance of the telephone a small area bounded by the intersecting circumferences of overlapping coils can be placed exactly above the bullet or other piece of metal imbedded in a body, provided the metal does not lie at too great a depth. As soon as the balanced coils begin to feel the disturbance caused by their approach to the embedded bullet the telephone announces the fact by a faint continuous musical note and this note grows louder and louder until the over lapping parts of coils are directly above the disturbing metal when the sound reaches its maximum. For the convenience of the application to the body the coils used by Professor Bell this morning were mounted in a sectangular piece of walnut, about seven inches in length the corners for wires and a handle at the back by which it could be held. The following is Prof. Bell's report

to the surgeons upon to-day's experi-VOLTA LABRATORY, 1,221 CONNECTICUT AVENUE,

Washington, D. C., August 1st, 1881.) To the Surgeons in Attendance Upon President Garfield:
GENTLEMEN:—I beg to submit for your information a brief statement of the results obtained with the new form of the induction balance in the experiments this morning for the purpose of locating the bullet in the person of the President. The instrument was tested for sensitiveness several times during the course of the experiments and it was found to respond well to the pre-sentation of a flattened bullet at a distance of about four inches from the coils. When the exploring coils were passed over that part of the abdomen where a sonorous spot was observed in the experiments made on July 26th, a feeble tone was perceived, but the effect was audible a considerable distance around the spot. The sound was too feeble to be entirely satisfactory as I had reason to expect from the extreme sensitiveness of the instrument a much more marked effect. In order to ascertain whether similar sounds might not be obtained in other localities I explored the whole right side and back below the entrance of the bullet, but no part gave indications of the presence of metal except an area about two inches in diameter, containing within it the spot previously found to be sonorous. The experiments were repeated by Mr. Tainter, who obtained exactly corresponding results. We are therefore justified in concluding that the ball is located in the above named area. In our preliminary experiments we found that the bullet in question, when in its normal shape, showed no audible effect beyond the distance of two and a half inches, while the same bullet attended and presented with its face parallel to a plane of coils gave indications up to the distance of nearly five inches. The gave indications of the presence of RO. D. GRAHAM,

IN the State and United States Courts, Collections, Home and Foreign, solicited. Abstracts of Titles, Surveys, &c., furnished for compensation.

OFFICE:—N. E. Corner Trade & Tryon streets Charlotte, N. C.

WALLEY AT LAW.

I a plane of coils gave indications up to the distance of nearly five inches. The same flattened bullet had with its face placed to the plane of coils gave indications up to the distance of nearly five inches. The same flattened bullet had with its face placed to the plane of coils gave indications up to the distance of nearly five inches. The same flattened bullet had with its face placed to the plane of coils gave indications up to the distance of nearly five inches. The same flattened bullet had with its face placed to the plane of coils gave indications up to the distance of nearly five inches. The same flattened bullet had with its face placed to the plane of coils produced no sound beyond a distance of one inch. These facts show that in ignorance of the actual shape and mode of presentation of the bullet to the exploring instrument the depth at which the bullet lies beneath the surface cannot be determined from our experiments.

I am, gentlement.

I am, gentlemen, Yours truly. A. G. Bell. MRS. TAYLOR'S BOARDING HOUSE, corner Main and Depot streets, Hendersonville, N.C., is effered for sale to a bona fide purchaser on very invorable terms.

STATE NEWS.

Goldsboro Messenger: Capt. John Barry, the efficient road master of the W. & W. Railroad, was awarded the contract of grading the Scotland Neck Railway.

Gen. Ransom's river improvement force is now nearing the Johnston county line, and are making toward Smithfield. The work is slow but

For want of brick there is another week's delay in the work on the opera house, which but for this greatly annoying delay would be fully under roof in the course of another week. Some miserable wretch entered the

buggy despository of Mr. W. H. Borden one day or night of last week, and to satisfy a grudge or out of low cussedness, applied the knife to several new vehicles, damaging one seriously.

A huge petrified Hickory log, measuring some 24 inches in diameter, was recently taken from the bottom of the Neuse near this city, by Gen. Ransom's river force, and may now be seen on

the banks of the Neuse. Prof. Kerr, State Geologist, is anxious to secure it for the State Museum at Raleigh, but the difficulty is how to get it there. Wilmington Star: Dr. J. C. Walker. who has returned from Richmond, reports the condition of Maj. J. H. Hill, who was injured by a fall from a win-

dow, as much improved.

The Bank of New Hanover has de-clared a semi-annual dividend of four per cent., payable on and after August 5th next. There was an immense quantity of

vegetables and fruit in market yesterday afternoon. Master Nathan Rosenthal presented for our examination yesterday a pair of twin eggs, found in his father's chicken coop yesterday morning. The eggs were connected on the Siamese principle, all the yolk being in one shell and the white in the other; both the shells being quite soft, not having fully ma-

Alamance Gleaner: We are informed that a church in the southeastern part of this county and one in Orange have been closed and the doors nailed intensity. If, however, the experiment slides the upper coil along an inch or so upon the lower, so that their circumtent of deviltry whiskey will drive some men.

A Woman's Herolam.

Z. L. White relates in the Providence Press the following incident of the war, described to him, in company with Gen. Garfield, on a Southern railway train by the lady who was the heroine of the story:

"The lady was a resident of Memphis, returning from a visit to Connecticut, and her nieces were to spend the the war she had lived in the part of Kentucky through which we were rid-ing, and Gen. Garfield had seen important military service in the same section. She was young in 1861, and her lover had gone into the Confederate army. In one of the Kentucky battles he was desperately wounded, and as the Confederates were defeated, he had to be left upon the field. His sweet-heart, with a devotion which is the glory of her sex, accompanied only by a child, went to the field almost before the battle was over to find him and to save his life. She said that she had save his life. She said that she had never attempted to describe the horrible scenes she witnessed upon that battlefield, although they were stamped indelibly upon her memory. Her heart was strong and her purpose so determined that she walked among the dead and dying in search of her loved one, almost unmoved, and was finally rewarded by finding him. He was nursed back to life, and subsequently became back to life, and subsequently became the husband of the heroic woman whom even the terrors of the battlefield could not keep from his side in his hour of great peril. The most touching part of the lady's narrative, which was modestly related, with nothing in her tone or manner to show a consciousness of having done anything but a commonplace act, was the tribute she paid to the Union officers and soldiers with whom she came in contact. She had no words too eloquent to describe their chivalry and gentleness toward her, or their readiness even at such a time, when everything was confusion, to give

he had been before." Wendell Phillips on Nihilism.

From His Address at Harvard.

her all the assistance in their power.

The Yankee was ever after a different

character in her estimation from what

Nihilism is the righteous and honorof walnut, about seven inches in length able resistance of a people crushed unby four in breadth, with screw posts at der an iron rule. Nihilism is evidence of life. When "order reigns in Warsaw" it is spiritual death. Nihilism is the last weapon of victims choked and manacled beyond all other resistance. It is crushed humanity's only means of making the oppressor tremble. God means that unjust power shall be insecure, and every move of the giant, prostrate in chains, whether it be to lift a single dagger, or stir a city's revolt, is a lesson in justice. One might well tremble for the future of the race if such a despotism could exist without provoking the bloodiest resistance. I honor Nihilism, since it redeems human nature from the suspicion of being utterly vile, made up only of heart-less oppressors and contented slaves. Every line in our history, every interest of civilization, bids us rejoice when the tyrant grows pale and the slave re-bellions. We cannot but pity the suffering of any human being, however richly deserved; but such pity must not confuse our moral sense. Humanity gains. Chatham rejoiced when our fa-thers rebelled. For every single reason they alleged Russia counts a hundred, each one ten times bitterer than any Hancock or Adams could give. Sam Johnson's standing toast in Ox-ford port was, Success to the first insurrection of slaves in Jamaica," a senti-ment Southey echoed. "Eschew cant," said that old moralist. But of all the cants that are canted in this canting world, though the cant of piety may be the worst, the cant of Americans be-wailing Russian Nihilism is the most

Mrs. Ann Dougherty, residing at 384 E street, South Boston, says she suffered for sixteen years with sait rheum, without any benefit from the usual means, and was quickly cured by the appli-cation of St. Jacobs Oil—the people's great reme-dy for rheumatism and similar aliments.

BEGULABITY, INTEGRITY AND PUNCTUAL The regularity with which the drawings of the Louisiana State Lottery Company take place invariably on the second Tuesday of every month at New Orleans, La., and the price of ticket is only two dollars, has become so generally known and confidence so well established in its integrity of management, that it is hard to find a man or woman who has not written to M. A. Dauphin, New Orleans, La., in the liope of receiving \$30,000.

A Down Town Merchant,

A Down Town Merchant,

Having passed several sleepless nights, disturb ed by the agonies and cries of a suffering child, and becoming convinced that Mrs. Winslow's Soothing Syrap was just the article needed, procured a supply for the child. On reaching home and acquainting his wife with what he had done, she refused to have it administered to the child, as she was strongly in favor of Homocopathy. That night the child passed in suffering, and the parents without sleep. Returning home the day ollowing, the father found the baby still worse; and while contemplating another sleepless night, the mother stepped from the room to attend to some Comestic duties, and left the father with the child. During her absence he administered a portion of the Scothing Syrup to the baby, and said nothing. That night all hands sleet well, affil the little fellow awoke in the morning bright and happy. The mother was delighted with the sudden and wonderful change, and although at first offended at the deception practiced upon her, has continued to use the Syrup and suffering crying bables and restless nights have disappeared. A single trial of the Syrup never yet fafled to relieve the baby, and overcome the prejudices of the mother. Sold by all Druggists. 25 cents a bottle.

Southern Farms, and we The process of sub-dividing the large The process of sub-dividing the large plantations into smaller farms is going on steadily in the South, even in the States where the old system had taken the deepest hold. The hard-working farmer, who follows the plow himself, is gradually crowding out the luxurious planter, who in the ante-bellum days scarcely took the trouble to direct the operations of his laborers. In Mississippi, for instance, there were 42.840 sippi, for instance, there were 42,840 plantations in 1860, and the average number of acres in each was 370. Ten years later there were 68,023 farms, the average area of each being 193 acres. In 1880 the number of farms was 75,205 -averaging 185 acres each. While the area of cultivated land is less than it was in 1860, yet the production of cotton is nearly twice as great. The census of 1890 will doubtless show a still greater change in the domestic economy of the South, as indicated by a larg-er number of land owners, and a vast increase in agricultural products.

KIDNEY DISEASES. Kidney diseases afflict the greater part of the human race, and they are constantly on the increase, but where the virtues of Kidney Wort have become known, they are held in check and speedily cured. Let those whe have had to constantly dose spirits of nitre and such stuff, give this great remedy a trial and be cured. In the dry form it is most economical, in the liquid the most convenient.—Philadelphia Press.

DR. TULIO S. VERDI, of Washington, D. C., the celebrated author, commissioner of the National Board of Health, etc., says the L.ebig Co's Arnicated Extract of Witch Hazel "is invaluable." Cures piles, sait rheum, catarrh, painful periods, rheumatism, colds, and neuralgia. Beware of cheap counterfeits. The Liebig Company offers no cheap goods. It offers only honest preparations at honest prices.
