DAY, AUGU 1 3

motion by land and sea-which recent experiments and discoveries in generating fuel have initiated—has its present centre of interest at the Grant Locomotive Works, in Patterson, N. J Although the first locomotive specially adapted to the new fuel is so nearly completed that September will probably see it on the road between New Chicago, and the great revo-

tape, or the husbanding of an advertising sensation, than like wide-awake independent journalism. I have, therefore, waited only until the new machine could be photographed in its substantial entirety on the shop floor be-fore visiting the works at Patterson and introducing it to the public. The new locomotive, generating and burning hydrogen gas from water by the Holland process, is now on its rotary legs (i. e., wheels), visible and complete in its substantial parts. Its jacket is off, however, and the workmen are still busy at the long process of heading in the 2,174 copper flues that give its interior the semblance of a number of church organs packed into one. This great number of flues for the passage of flame, etc., their small calibre and close proximity, are to be understood as not

so much a peculiar necessity as a peculiar prerogative of the new fuel—the

most tenuous, mobile and intensely

calorific substance known. Copper has about twice the conductivity of iron, but is too soft or the flues of the authracite-burning be omotive. The violent dra't required to make locomotive steam with anthracite coal drives a continual hail-storm of sparks and burning coals through the flues, and would cut them up, if of copper, at an extravagant rate. Copper, again, repels the salts, suspended in most water, that firmly unite with and incrust the surface of iron flues. In this way the use of gaseous fuel permits a second saying often of about mits a second saving, often of about one-half, in the cost of steam. More important still, however, is liberty to diffusing the water in thin strata be-tween the hot surfaces. It is impossi-ble to use such flues with crude fuel.

Vaporous poison, spreading disease and death in many localities, for which quinine is no genuine antidote, but for the effects of which Hostetter's Stomach Bitters is not only a thorough remedy, but a reliable preventive. To this fact there is an overwhelming array of testimony, extending over a period of thirty years. All disorders of the liver, stomach and bowels are also conquered by the bitters. Its heavy smoke and sparks could scarcely be urged through them at all. Still another economy of great value dependent on the hydrogen process, is the second or inner combustion-chamber peculiar to this locomotive. This is a clear gain out of the space required in other locomotives for the coal and in other locomotives for the coal and wood-burning furnace. Gas requires not one-fourth as much furnace room. The upper three-fourths are therefore utilized as an interior fire-chamber with large heating surface surrounded by water. It is a sort of stomach or intermediate enlargement of the multitubular alimentary canal of the boiler. Short vertical fire-flues, 1,662 in number and of 5%-inch calibre, lead into it directly from an army of gas burners just beneath them. The water is everywhere beneath and around the flues and the fire-chambers. Then, from the and the fire-chambers. Then, from the forward end of the inner fire-chamber, 512 horizontal flues, eleven feet long and of 34-inch calibre, lead the hot gases of combustion (through surrounding water) to the final outlet. These are about three times as many as can be got into a coal-burner of the same size, besides the 1,662 short flues. Meanwhile the same while, the burning flame as it enters the inner fire-chamber meets injected air to perfect its combustion, so long as there remains any color in it of unconsumed carbon or carbonic oxide—that is, until the "black fire," or pure hydrogen flame, is fully developed.

Altogether, the heating surface in the new locomotive is two and a half times.

new locomotive is two-and-a-half times that available in a coal-burner of the

Back pressure on the pistons, from the retarded escape of used steam, is considerably aggravated in the coalburning locomotive in consequence of the necessity for contracting the ex-haust in the smoke stack to force a draft. No forced draft is required in burning hydrogen, and therefore the exhaust is made perfectly free, and will be as noiseless as in a stationary en-gine.

the necessity for contracting the exhaust in the smoke stack to force a draft. No forced draft is required in burning hydrogen, and therefore the exhaust is made perfectly free, and will be as noiseless as in a stationary engine.

Smoke and sparks—the latter an agent of destruction that costs many millions of dollars every year—are now virtually obsolete nuisances. The entire product of hydrogen combustion is aqueous vapor, and in the Holland locomotive this is barely qualified by a small ingredient of carbonic acid. The vapor has invariably been found too pure to soil a white handkerchief, and a dirty one could actually be washed white in the mouth of the smoke stack.

The weight of this locomotive on the

What Is It?

Willis Point (Fia.) Local. For some time past fishing parties and citizens in the neighborhood of Goose Lake have been alarmed by the appearance in the lake of a strange monster, unlike anything ever seen or heard of heretofore. It was first seen Speedy relief and complete restoration to health guaranteed. These are the only Electric Appliances that have ever been constructed upon scientific principles. Their thorough efficacy has been pracciples. Their thorough efficacy has been practically proven with the most wonderful success, and they have the highest endorsements from medical and scientific men, and from hundreds who have been quickly and radically cured by their use.

Send at once for Illustrated Pamphiet, giving all information free. Address, heard of heretofore. It was first seen about three years ago by Mr. J. Z. Scott, while fishing in the lake, and since that time it has been seen by numerous parties. It has a body between fifteen and twenty feet in length and as large around as a common horse. It has a bodd like a dog and tail like a leater. head like a dog and tail like a catfish. No fins or feet have ever been observed, though it seems to move with the mo-tion of a fish rather than that of a snake. All those portions of the body. though it seems to move with the motion of a fish rather than that of a snake. All those portions of the body which have been exposed are covered with long hair of a dark color. It swims with astonishing rapidity and will follow a lighted boat at night. On the night of July 27th, Messrs. Aaron Terry and N. G. Osborne were out in a boat gig.fishing, when the monster approached within striking distance and they drove the gig deeply into it. The animal freed itself with a violent effort, twisting the prongs of the gig like so many straws. The citizens in the neighborhood are talking of procuring harpoons and organizing a regular whating expedition.

SOME OF HIS EFFUSIONS. are directed to outside parties in reference to procuring bail, while others purport to give an account of the alleged version that inspired him to shoot the President, and his reasons for the shooting, such as have been published over and over again.

over and over again.
Since the episode with the guard McGill, a few days ago, he has been very bitter towards the guard. A few very bitter towards the guard. A few nights after the occurrence, seeing Mr. McGill in the rotunda, he demanded to know why he was not locked up, claim-that McGill was as guilty as he was only McGill failed to shoot. Subsequently he addressed a letter to an official outside whom he regards as a stalwart friend, requesting him to go to Judge Wylie and make charge of assault with intent to kill against McGill (on information and belief). It is needless to say that this letter has not been sent to the party to whom it was addressto the party to whom it was address-

THE MILITARY GUARD.

Thus far the military guard at the jail has not been increased, but it is understood that the marines at the barracks on Eighth street east are under orders, and in case of an uprising they could in a few moments re-inforce the artillery at the jall. It is thought that Guiteau fears an attack on the jail, and that rather than fall in the hands of a mob he would have no hesitancy in putting an end to his existence.

PUBLIC FEELING. The feeling in the community as the President's condition gets worse is becoming intensely bitter. The Govern-ment doubtless intends that the priso-ner shall be kept safe and that he shall be given a fair trial.

PRECAUTIONS TAKEN BY THE GOVERN-

General Sherman said last night that full preparations had been made to meet any possible emergency, but he declined to say what the arrangements were; that the Secretary of State, the Secretary of War and himself had con-sulted and perfected the plans; that contract the flues to small calibre, as in this locomotive, bringing the incandescent gases more entirely into contact with the heat-conducting metal, and utes; and that there was no need for unnecessary public excitement.

> A VISIT TO MRS. GARFIELD, SR. A Lawrence-County Lady's Chat with the President's Mother.

New Castle Courant, August 19. To-day, in the quiet little village of Hiram, Ohio, I had the pleasure of spending several hours with Mrs. Garfield, the aged mother of our President, a jovial, fresh-faced lady of over 80 years, who still walks as spry as a girl. Our gifted President must have inherited much of his marvelous energy from this little mother, whose kindly, reso-lute face is only a more delicate type of the rugged features of her statesman

With much vivacity she told us of earlier days, when left a widow with four little children, her pioneer neighfour little children, her pioneer neighbors offered to make a "bee" and split rails for fencing her land. But when these helpers found that this stanch, young temperance matron would not furnish them whiskey, according to the custom then, they all quit their work, leaving the logs only quartered. But, true to her principles and nothing daunted, the grand little woman herself took up the maul and alone split sixty rails. She says: "Every time I lifted the maul, it was so heavy and I so slender, its weight nearly pulled me backward." "Are you not proud to think of it now?" asked her aged sister, Mrs. Boynton. "Oh," answered Mrs. Garfield, "I am ashamed to think that men were ever such slaves to whiskey." She says in those days she always walked three miles to church, taking off her shoes and stockings to wade the Chagrin River, which ran between her house and the meeting-house. With tears in her eyes she told us of every evening reading the Bible with her youngest son and said he always was a good boy.

up, for his work is not yet done."
MRS. WM. M. TAYLOR.

Detectives at Weddings.

Detective in the St. Louis Post-Dispatch. We go about it in this way: We are notified a day or two beforehand of the wedding, giving us time to visit the house, see all the apartments and learn the arrangements for the disposition of the guests, their clothes, wraps, etc., and where the presents will be placed. We now have the "lay" of things, as you might term it. In the evening I repair to the residence a little later than the other guests, but effect a quiet entrance, so I am not present with a difficulty. So with some excuse to the servant I manage to be on the scene without any one being the wiser. My stand is near the wedding presents if they are near the guests. I soon have an opportunity to examine the faces of the guests, and can easily learn their relations and the resition of their right. relations and the position of their right

at the celebration. Bravo Kalakans.

THIS SPEAKS OF THE

And positively the only big show that will exhibit at

CHARLOIP

THIS YEAR.

Wednesday, Sept. 14th

Is the time fixed for the coming of the Great Show to Charlette, and it will only exhibit for the one day

NO SOONER, NO LATER, NO LONGER.

OLD JOHN ROBINSON'S

Great Electric Light Show

MUSEUM, MENAGERIE, AQUARIUM AND

Strictly Moral Circus

Travelling by its own special trains of steel parlor palace cars,

50 Years Without Change.

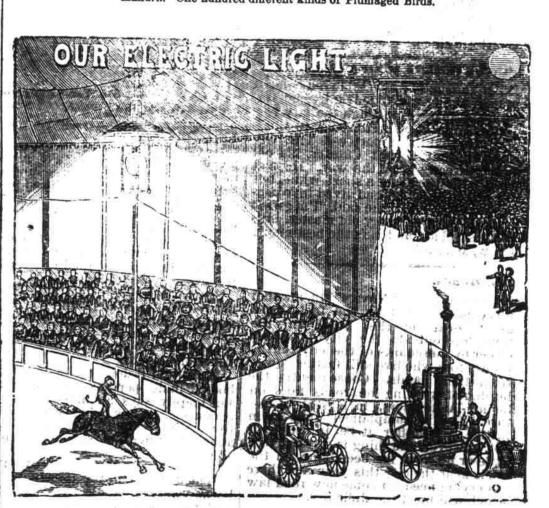

FIRST IN ALL THINGS!

FIRST IN MERIT!

FIRST IN MAGNITUDE! . FIRST IN MAGNIFICENCE!

THE SENSATIONAL FEATURES ARE:

The Great Electric Light. A Herd of the Largest Elephants. The largest Rhinoceros in America: weight 4;000 lbs. A Giant White Polar Bear. A Drove of Bactrian Camels. Musk Ox. A Colos sal Living Crocodile, 20 feet long. Egyptian Valpus. One hundred different kinds of Monkeys. Pair of Sacred White Peacocks, worshipped in India as gods. The Man-Eating Mandril. One hundred different kinds of Plumaged Birds.

The Startling Novelties are, 100 Performers, Male and Female. A Cortege of Golden Charlots, 50 Dens of Rare Wild Animais. A School of Sea Lions. 100 Diminutive Shetland Ponies, smaller than New Foundland Dogs. A Troupe of Hindoo Jugglers. The Circus embraces more Equestrians, more Vaulters, more Gymnasts, more Clowns, more Athletes, more Specialties, than any other show in America.

And now a few words to the people of Charlotte and vicinity: You all know the show. It has always been known as a Big Show. It is larger and grander than ever. The pictorial bills of the old John Robinson Show are correct representations of the wonderful features which can be witnessed in the Circus and Menagerie. Just added, a Giant Ox, 20 hands high; is larger than an Riephant. Also, a Tawney Midget Cow, from Caffra, South Africa; height 30 inches; the only one ever on Exhibition in America. The Menagerie embraces more Lions, more Camels, more Tigers, more Cages, more Elephants, more Monkeys, than any other Show-in America.

The Extraordinary Attractions are a Troupe of Hindeo Jugglers. The Anatomical Wonder. The Samson of the Nineteenth Century! The Human Meteor. A Weman shot from a Cannon loaded with powder, and whirled through the air with terrific force and speed. The Best Educated Troupe of Dogs and Monkeys in the World. These are features owned, controlled and exhibited only by this the Greatest of all Shows. No exceptions.

A few more Special Attractions, just received from my European agents: The great TAMINOR. first and only one ever seen in captivity, or ever on exhibition; and still another great feature, the most Wonderful of all Antelope species, the GNU, the Horned Horse, who has the resemblance of a Horse, but is still a Deer; another great feature, the SILYER ANTELOPE, the first and only one ever exhibited; and still another, the SOUTH AMERICAN SLOTH, that you all have read about but have never seen. One hundred yards of BOA CONSTICTORS and ANNACONDAS; and still another great feature, the most wonderful of all, a herd of real live GIRAFVES, the most beautiful and costly animals on exhibition and the only ones now on exhibition.

The Great Street Parade is bright, beautiful and brilliant. There will be no combination with any other shows—the time is fixed. The OLD JOHN ROBINSON SHOW never changes or postpones, and his show is too big to need a combination with any other. Two thousand reserved cushloned chairs at but a small advance.

Remember, One Ticket Admits to All

The admission to these vest shows is no more than is charged by miner shows, with only one of
