The Charlotte Observer. ATHURSDAY/SECT. 22, 1881.

THE PROPOSED FUND FOR MRS. GAR-FIELD. On the 7th of July the New York
Chamber of Commerce suggested the
propriety of raising the sum of \$250,000
as a gift to Mrs. Garfield in the event of
the President's death, and inaugurated
the subscription with a landsome sum.
A number of subscriptions followed in various cities, and the latest published announcement shows that the fund has reached so far \$155,000.

THE REFRIGERATING PROCESS. Several attempts were made to reduce Several attempts were made to reduce the temperature of the President's room, but satisfactory results were not secured until the 10th, when the refrigerating machine of Mr. Jennings, of Baltimore, was put into operation, and has been worked with almost uniform success ever since.

13th, the President awake with a level, which abated during the forencom, and at the close of the day the physicians reported him as "deiny all." Sunday, the 14th, failed to show change for the better, an official anetin issued at 6:30 p. m., was forced to admit a pulse of 108, temperature of 109.8, and respiration 10

PROGRESS OF THE CASE. The patient was reported to be progressing favorably until Monday, the 11th, on which day and the following there was a rise in the temperature, but on Wednesday he again began to improve, and on Thursday the physicians were so much encouraged that their previous tears, while the reports from Washington, based on the expressions of medical opinion, announced in sanguing terms that the nounced in sanguine terms that the "crisis was passed." At this time the patient's appetite commenced to improve, he was allowed more solid food, the doctors began to talk about a sea-voyage, and on the 16th Dr. Bliss is reported as saying that "in a couple more days he can do just about as he pleases. His improvement is not only continual, but wonderful." On the 18th, however, there was a return of the afternoon fever and a quickening of the pulse, which was accounted for by the physicians by the statement that the Presicians by the statement that the President had taken a largely increased

quantity of solid food during the three preceding days, and that his stomach had been overtaxed. This interruption to his satisfactory progress was but temporary, and on the 22d he appeared. to be doing so well that Dr. Bliss is quoted as saying "that if he had hold of the bullet with a pair of forceps he would not pull it out, for by doing so he would lacerate the tissues, which are so nicely healing up." THE FIRST ALARMING RELAPSE.

This confidence was rudely shaken on nearly an hour and which was followed by a fever. During Saturday night there was a slight recurrence of the chill. The pulse ran up to 130, the chill. The pulse ran up to 130, the chill. The pulse ran up to 130, the chill afternoon the swollen gland in the large of air was exceedingly desirable, a majority were of the compensature rose to 104 and the pulse. temperature rose to 104 and the respi- letin of 6:30 p. m. announced a pulse of opinion that it would be unwise to ration was 25. Drs. Hamilton and Ag-

On Thursday, the 27th, the doctors, in their morning dispatches, announced the improvement "distinctly perceptible," and the sufferer was deemed so much better that his bed was pushed into the adjoining room and his own apartment, thoroughly cleaned and apartment thoroughly cleansed and aired. Nevertheless on the same evening the persistent fever returned, which, however, the physicians said, "caused them no anxiety." Public attention was attracted at this stage of the case to the singular fact that Fridays were the President's favorable days, while each recurring Saturday had developed symptoms of a more or less alarming character. Saturday, the 30th of July, however, was an excep-tion, and on that day the wounded man was so much better that he ate a bit of broiled beefsteak, and by means of a frame under the mattress was chabled to sit up for a considerable length of time. The obstinate afternoon fever continued to return, but seemed not to

101.9, respiration 19. Another pus cavity was suspected, and on Monday, August 8, a second surgical operation was performed by Dr. Agnew, and a pus cavity discovered and relieved. The President was etherized, an incision made extending downward and forward into the track of the ball below the margin of the twelfth rib. This operation, it was predicted, would prevent the return of the afternoon faver, and would set the sufferer on the high road to recovery. He was, however, found to suffer much from the effects of etherization, and the afternoon fever returned with terrible regularity. The

official evening bulletin of August 9th reported the pulse as 106, temperature 101.9 and respiration 19. WRITING EXPERIMENTS. In spite of the tremendous and pro-In spite of the tremendous and pro-tracted strain to which he had been subjected and the weakening effects of the recent operation, Mr. Garfield, on the 9th, at the request of Dr. Bliss, was partly raised in bedand wrote his name on a tablet in a clear, steady hand, and on the 11th wrote a brief letter to his mother.

REVIVAL OF CONFIDENCE. On Wednesday, the 10th, the evening balletin of the physicians innounced that the President had passed fan ex-

pressed that he would soon begin to receive his lost ground. But his pulse on that day was 110, his temperature 101, and his respiration 19. Friday the 12th found the President in the same condition, although the physicians stated he had passed a "confiortable" day. The pur was still pronounced by the bulletins as of unimpeachable that used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday, seemed to be of a different used in performing the operation of Monday seemed to be of a different used in performing the operation of Monday seemed to be of a different used in performing the operation of Monday seemed to be of a different used in performing the operation of Monday seemed to be of a different used in performing the operation of Monday seemed to be of a different used in performing the operation of Monday seemed to be of a different used in performing the operation of Monday seemed to be of a different used in performing the operation of Monday seemed to be operation of Monday seemed to be of a different used in performing the operation of the patient had the bull the subject to be possed as the monday

The first gleam of hope came from the patient himself on Saturday night.

On Monday morning the 15th, the physicians announced hat the President had passed a restlem night, that he had womited several times, and that his pulse was 168. The patient's mind was perfectly clear, he as made in the swellen gland and a small quantity of pus liberated. The patient's mind was perfectly clear, he was entirely free from nausea, and the quantity of nourishment given him was considerably increased.

The sixtieth DAY.

On Tuesday morning, August 30, the President entered upon his sixtieth day of suffering. His pulse was higher, (108) but his other symptoms were regarded as favorable. The day went by without special incident, and at its close the patient had not materially improved, STILL ANOTHER RELAPSE. President rested badly, but after that hour the physicians reported the symptoms as on the whole somewhat less urgent than on the previous day.

ation 19.

Tuesday, however, brought no amel-ioration in the President's symptoms or condition. His stomach was still unable to retain nourishment, and at 7 p. m. his pulse was 120, temperature day, and the bulletins were all encour-98.9 and respiration 19. In the after aging, At noon the pulse went down noon a meeting of the members of the te 95, but it was 109 when the evening cabinet took place, and Dr. Bliss was bulletin was issued. The patient sea-summoned before them and made a pacity to take nourishment was greatly statement as to the condition of the President, in which he expressed the opinion that he had at least an even chance of recovery. There was but little change on Wednesday, the 17th, though those in attendance were slightly more hopeful. At 6:30 p. m. his pulse was 112 temperature 98.8 and pulse was 112, temperature 98.8 and when the President experienced a sudden, serious and alarming relapse.
About 8 o'clock in the morning, while the wound was being dressed, the patient was taken with a chill that lasted nearly an hour and which was follows:

Ing of the parotid gland caused some alarm, but the bulletin issued at 6:30 p.

m. reported the patient as "rather better than this time yesterday," his pulse at this hour being 108, temperature 100 and respiration 18. On Friday how ing of the parotid gland caused some toms.

temperature rose to 104 and the respiration was 23. Drs. Hamilton and Agnew were summoned by telegraph and arrived in Washington at 7:30 p. m., the time consumed by their train from Jersey City being only 4 hours and 36 minutes. The formation of a pus cavity was announced as the disturbing cause, and on Sunday morning, the 26th, an incision was made through the muscles of the back, the channel of the wound was tapped some three inches from its outer opening, and the flow of the pus, which was still pronounced "good and laudable," was again apparently unobstructed. The operation was performed by Dr. Agnew, and was bravely borne by the President with only the aid of local anæsthetics. The operation seemed to remove the trouble, and in a few days the patient was again reported improving. Several splinters of bone from the fractured rib were removed through the incision.

AGAIN IMPROVING.

On Thursday, the 27th, the doctors in their morning dispatches, announced a pulse of 10.6 tamperature 100, restrict a first made public the President's physician first made public the President's physician first made public the parties of two depth of twelve and a half inches. Up to this time lower portion of the wound had healed, leaving a suppuration channel three or four inches long communicating with the own of the wound had healed, leaving a suppuration thannel three or four inches long communicating with the constitution of the wound that the President, at the end of the wound that the President, at the end of the wound that the President is a suppuration channel three or four inches long communicating with the case of the back, the channel of the wound that he wound to a depth of twelve and a half inches. Up to this time lower portion of the wound had healed, leaving at an incision was made through the flow of the wound that healed, leaving a suppuration channel three or four inches long communicating with the case of the back, the channel of the wound that healed, leaving and after catching a wind after catching a wind af 106, temperature 100, respiration 16. sicians were most anxious to suppress—nausea of the stomach. He vomited at 2 p. m. and at 5 p. m. The taking of ac 2 p. in. and at 5 p. in. The taking of accurate most in the natural way was suspended, and the condition of the patient became most critical, and at the time of issuing the evening bulletin his pulse was 108. He slept, however, at intervals during Sunday night, and at 8:30 on Monday morning his pulse had fallen to 104. There being no return of the nausea, the administering of liquid nourishment was cautiously resumed and kept up during the day. No unfavorable symptoms were reported in the official bulletins except that the pulse rose to 110 in the evening. His condition on Monday was upon the whole regarded as more encouraging than on the previous pay.

During the next day there was no return of the nausea, but the physicians, fearing the irritable condition of the stomach, continued to supply neurishnourishment in the natural way was

binn. The destinate attentions fevere continued to return, but seemed not to disturb the hopes of the medical attendants.

THE INDUCTION BALANCE.

Previous to the President's relapse some experiments with Prof. Bell's induction balance, made for him by Mr. Watts, of Baltimore, were undertaken, and after he rallied they were resumed. The bullet was at first supposed to have penterated the liver, but subsequent examination showed this not to be the case. Prof. Bell's instrument was tried again on the ist of August, and though it failed to fix the axact location of the bullet, it pointed out satisfactorily the general locality. After the relapse of the 23d of July it was considered best for at least one of the consulting playsiclans to remain and the city, and this course has accordingly the entire of the consulting playsiclans to remain continuity in the city, and this course has accordingly the pen pursued. On Wednesday, the 3d of August, the official bulletins still spoke of steady progress to wate considered best of all spans of the consulting plays well up to him the patient's pulse, well up the 7th, the pulse was 108, temperature | President to some place where he would be surrounded by conditions more fa-yorable to recovery. Dr. Agnew has-tened to Washington and a consulta-tion was held at the White House late at night, the result of which was not made public.

ALARM THOUGHOUT THE COUNTRY.

The consultation was resumed on Thursday meming, and at its conclusion an official bulletin was issued announcing that in the opinion of a majority of the physicians it would not be prudent to remove the President. This was interpreted by the country as an unfavorable sign, and being followed soon afterwards by a bulletin announcing that the President's pulse had risen to 1,12, created profound anxiety. During the next two days the death of the President was regarded as imminent, and even Dr. Bliss, the most sanguine of his physicians, regarded the case as hopeless. The glandular swelling developed into a great abscess, with pus points showing themselves in many places. On Thursday night Mr. Blaine telegraphed to Minister Lowell that the President was lesing ground, and the other dispatches from the Exceptive Mansion were agastly discouraging. The Pusident's sleep was broken at short intervals and when he sweet he was troubled with mental influentations. There was little or so improvement on Friday. Pus cells

He remarked to one of his attendants that he felt better, and soon afterwards he ate a small piece of milk toast with apparent relish, the first solid food that he had tasted for many days. There was a decided change in the tone of the dispatches from the Executive Mansion on Sunday, and the sanguine again began to hope for recovery. There was some improvement in the pulse on

patient had not materially improved, but had suffered no relapse. The fact that he survived sixty days was interpreted by many as a sign of ultimate recovery. His pulse was 109 when the evening bulletin was issued, and its frequency increased till near midnight. The next was regarded as a favorable ninth week of his suffering with a high respiration 20. Thursday a slight swell- pulse but no other unfavorable symp-REMOVAL TO LONG BRANCH.

The project of removing the President to some locality where the conditions, would be more favorable to recovmove the patient until he had partially for his reception he showed signs of extreme exhaustion, and during the night of the 6th his condition was exceedingly critical. Although the next day was warm and oppressive, the patient made some improvement, and on Thursday and Friday the bulletins were quite encouraging in tone, and gave some hope of recovery. On Saturday, September 10, there was a change for the worse. The official bulleting showed that the pulse was becoming more frequent and the fever more exhausting. On Sunday a portion of the tume-fied gland sloughed off, and it was an-nounced (but not by the attending surgeons) that an abcess had formed in the right lung. The evening bulletin of Sunday, September 11, gave the pulse as 110, temperature 100.6, and respira-

NEARING THE END. The official bulletin of Friday evening gave the pulse as 110 and the respiraion as 22.

On Saturday there was a recurrence of the dreaded "rigor," which was interpreted as a sign of approaching death. It was followed by a fever and the temperature again rose to a danger-ous point. From this time forward the symptoms were those which precede the moribund condition—quickened respiration, a feeble, fluctuating pulse which semetimes rose to one hundred and forty beats a minute, a temperature that varied two and sometimes three degrees with the rise and fall of the fever, and frequent spells of delirium. The alimentary organs having ceased to perform their office, stimulants were freely administered, and in this way life was sustained for a few hours beyond the time death would have inevitably occurred from inanition. The end came at 10.35 p, m. Monday September 1941 illes ther i .... i will sell the ber
