Patent Medicines.

IRON BITTERS

A TRUE TONIC

SURE APPETISER

IRON BITTERS are highly recommended for all diseases requiring a certain and efficient tonic; especially Indigestion, Dyspepsia, Intermittent Fevers, Want of Appetite, Loss of Strength, Lack of Energy, etc. It enriches the blood, strengthens the muscles, and gives new life to the nerves. It acts like a charm on the digestive organs, removing all dyspeptic symptoms, such as *Tasting the Food, Belching, Heat in the Stomach, Heartburn, etc.* The only Iron Preparation that will not blacken the teeth or give headache. Sold by all druggists. Write for the A B C Book, 32 pp. of useful and amusing reading—*sent free.*

BROWN CHEMICAL CO., Baltimore, Md.

Dr. HARTER'S

Endorsed and recommended by the medical profession, for Dyspepsia, General Debility, Female Diseases, Want of Vitality, Nervous Prostration, and Convalescence from Fevers, &c.

GENTLEMEN: I was suffering from general debility to such an extent that my labor was exceedingly burdensome to me. A vacation of a month did not give me much relief, but on the contrary, was followed by increased prostration and sinking chills. At this time I began the use of your IRON TONIC, from which I realized almost immediate and wonderful results. The old energy returned and I found that my natural force was not permanently abated. I have used three bottles of the Tonic. Since using it I have done twice the labor that I ever did in the same time during my illness, and with double the ease. With the tranquil nerve and vigor of body, has come also a clearness of thought never before enjoyed. If the Tonic has not done the work, I know not what. I give it the credit. J. P. WATSON, Pastor Christian Church, Troy, O.

The Iron Tonic is a preparation of Protoxide of Iron, Peruvian Bark, and Phosphates, associated with the Vegetable Aromatics. It serves every purpose where a Tonic is necessary.

IRON TONIC.

THE GENUINE

SIMMONS LIVER REGULATOR

has acquired a reputation greater than any medicine extant as the

CHEAPEST, PUREST

and best family medicine in the world.

It acts with extraordinary power and efficacy on the Liver—the largest organ of the body, called, from its importance, the House-keeper of our Health. When the Liver is torpid, the bowels are sluggish and constipated; the food lies in the stomach indigested and poisoning the blood. Frequent headaches, a feeling of lassitude, despondency, and nervousness, indicate how the whole system is deranged. To prevent a more serious condition, at once

Take SIMMONS LIVER REGULATOR.

The test of time and the experience of thousands have proven it the best, safest and speediest remedy for all diseases of the Liver, Stomach and Spleen. As a remedy in

MALARIOUS FEVERS,

Dyspepsia, Mental Depression, Sick Headache Jaundice, Colic, Constipation and Biliousness,

IT HAS NO EQUAL.

We could fill a good-sized volume with such like distinguished testimonials as the following:

I have used Simmons Liver Regulator for constipation of my bowels, caused by a temporary derangement of the liver, for the last three or four years, and always when used according to the directions with decided benefit.

HIRAM WARNER,
Late Chief Justice of Georgia.

I occasionally use, when my condition requires it, Dr. Simmons Liver Regulator, with good effect.
ALEX. H. STEPHENS.

THE BALTIMORE EPISCOPAL METHODIST says: "Simmons Liver Regulator is acknowleged to have no equal as a liver medicine, containing those Southern roots and herbs which an all wise Providence has placed in countries where liver diseases prevail."

THURSDAY, NOV. 10, 1881.

A CHAPTER ON COTTON.

Some Interesting Facts on Its Treatment and Uses.

Mr. Edward Atkinson met several representatives of the press at the press pavilion, at the Atlanta Exposition, Monday afternoon, and gave an interesting talk on the culture of cotton and the different modes of preparing it for market. One of the most important features of the Cotton Exposition is that it brings together the cotton grower, who is unacquainted with the manufacture of the staple into merchantable goods, and the cotton manufacturer, who knows nothing practically of the cultivation of the crop, and enables them to learn invaluable lessons from the experiences and suggestions of each other, the general results contributing to the good of both. The preparation of sea island cotton for the use of fine spinners is a handicraft, and never has a machine been invented to properly clean and prepare it. The same care is required, in less degree however, in picking, moting and preparing the upland staple for market, and to ascertain the cheapest and best solution of the problem is fraught with wide-reaching consequences. Upland cotton is the greatest and most useful crop. It is ginned on the saw gin, but the saws nip the fibre, consequently decreasing its strength and depreciating its value, and for this reason it is claimed that, except in the quantity of work that the saw gin will do, the roller gin is better adapted to the working of the fibre and the preparation of the staple for market. The pending question at the Exposition is whether or not the inventors of roller gins have brought the capacity of their machines up so nearly to that of the saw gin that planters can use it without decreasing their profits; whether a single roller gin, operating against a saw gin, will do an equal amount of work with less motive power and less labor. The matter will be put to the test at the meeting of

THE COTTON GROWERS' ASSOCIATION,

which will be held on the Exposition grounds on December 6. A roller gin that, in Mr. Atkinson's judgment, will beat any gin in the world, is now being constructed and will engage in the competitive trial. The best roller gin in England is the Dobson & Barlow gin, and the next best gin is now in the Exposition, and was made by Platt Brothers, at their factory in Alabama. A preliminary trial of all the gins in the Exposition will be had on next Wednesday, and their product will be carried by Mr. Atkinson to Boston for exhibition before the New England Cotton Manufacturers' Association, which will be held in that city on November 30.

This ginning match will be the first that has ever been held, and although the preparations are imperfect they are wonderfully adequate. The beginning of the science in the treatment of cotton from

THE FIELD TO THE FACTORY

will be laid here. It will be necessarily but only a beginning.

Mr. Atkinson has proposed another trial of every kind of gin, cleaner, press and picker, to be made in the building of the New England Mechanics' Institute in Boston, in December, 1882. Every man in the South who is especially interested in cotton production and manufacture will be invited to plant a specific acre for use at this trial, which will be the second step in what has been so well begun in Atlanta. The picking and saving the cotton wasted on the ground, the cleaning, ginning and packing of the staple in good condition, offers to the Southern States a branch of cotton manufacturing the most important in the whole series of operations which neither the Northern States nor Europe can share, but in which there is greater opportunity for profit in ratio to the capital invested than in any other department of manufacture. "No staple in the world," said Mr. Atkinson, "except the sugar raised by the Malays, is treated so barbarously as the cotton produced in the Southern States of the American Union."

AN IMPORTANT QUESTION.

One of the great questions to be determined is whether the compression of the cotton after it has been ginned injures the fibre. It has been assumed, theoretically, that if cotton were spun without being baled it would give a better product. Northern manufacturers are divided in opinion as to whether the country bale is better than the bale subjected to the tremendous power of the steam compress. In England some cognizance was taken of the matter in the trial of East India cottons, at which it did not appear that compression did any harm. Mr. Dumont, an experienced manufacturer, who operates the Lowell and Woodlawn Mills at Lowell, Gaston County, North Carolina, recently made a test of the matter and with similar results. He took a lot of cotton that had never been baled, another lot that had been baled by a country press, and a third lot that had been subjected to the hardest pressure the Charlotte steam compress could give it. Each lot was separately spun into yarn, and to Mr. Dumont's astonishment he found less waste and a larger product from the compressed cotton than from either of the other lots. The product of the country bale was in turn better than that from the cotton taken from the field. The yarn made from the unpressed cotton was, perhaps, a fraction stronger than that spun from the pressed cotton, but what slight advantage it possessed in this respect was more than counterbalanced by the evenness of the thread from the pressed cotton, which after all is regarded as the surest indication of strength. The matter is not settled by Mr. Dumont's experiment of course, and in order to obtain an absolute result, better in fact than could be reached in a regular cotton mill, the Williamantic Company, who have their machinery in the main exposition building, will repeat the experiment over and over again. The final result will be anticipated with a great deal of anxious interest as it may largely affect the future course of the cotton market. But the capabilities of

THE COTTON PLANT

have not been sounded. In addition to the value of the fire as a substance for the manufacture of textile fabrics, oil may be extracted from the seed good for the tanyard and the table; the hulls are invaluable as animal food, the leaves possess medicinal virtues, the roots contain dyeing properties, and from the stalk the finest "jute" can be made. From the seed a valuable article of food, corresponding to the Chinese pea cheese, can be made, as nutritious, palatable and muscle-producing as beans can ever be. From the oil now made in Memphis and Cincinnati a

BUTTER IS MADE,

which is largely substituted for lard in frying meat, and especially by the Jews. Olive oil is made of cotton seed oil, and refined cotton seed oil is displacing olive oil on the tables of the poorer classes in Europe by reason of its cheapness. The pearl ash from the hulls of the seed, is largely used for manufacturing soap. The hulls with the lint attached is the best material known for packing the boxes of railroad car wheels. There are valuable tanning properties in hull and root. Sheep fed wholly on cotton seed will generally produce twin lambs, and one instance is cited of where three-fourths of the ewes in a farmer's large flock had twin lambs, supposed to have been partly caused by the cotton seed diet with which the animals had been wholly fed. Another important fact not generally known is that the wool-clip of sheep fed on cotton seed contains one and a half pounds extra of grease. In consequence the wool is somewhat depreciated in value, but there is nothing equal to this grease when treated by the naptha process for currying leather.

No one who does not visit the Fxposition can fully appreciate the great advances made in the machinery for the preparation and manufacture of cotton. There has never before been so complete a display of the appliances and facilities for working up this kingly crop, nor so large an opportunity for judging the superiority of American genius. Between the horse and the steam gins there is a vast difference, and between

THE PRIMITIVE OLD LOOM

from the mountains of East Tennessee and the swift flying shuttles of the modern weaver propelled by steam is measured the wonderful progress of the last half century. And yet we have not learned the alphabet of an industry that is rapidly advancing into a grand science.

Apples in New York.

The high prices at which apples have been selling in New York city have caused this fruit to be brought from a great distance. The Western New York crop, which for several years past has almost entirely supplied the New York market, will only give us one-fifth of the usual supply. Large quantities of apples in years past have been brought from Michigan by way of the lakes and Canada, but there is not a full crop in that State, and not many will come from there. Along the west or north shore of the Ohio river there has been grown a fair crop this season, while on the east or south shore there is a full crop. The southwestern apples are less hardy than the Northern apples and will not last as long, and cannot be safely stored for winter use. But so long as navigation continues open and the weather continues warm enough to keep the apples from freezing, the market will be kept fairly supplied from the Ohio river crops. There have been shipped to England this season less apples than for several years. During the early parts of the season apples sold quite low in all the English markets, and shippers of this fruit lost from $1 to $2 per barrel. But now that market is paying high prices for Newtown pippins, (which sell for more in that than any other apple,) for Spitzenbergs, Kings, and all the finest of these varieties are shipped across the ocean. To get these apples for this demand, New York fruit-dealers have gone through all parts of the country where there was any chance to get them, even into the mountains of North Carolina. One dealer has brought upward of 600 barrels from that State, most of which were carried down the mountains 20 miles to the railroads. These apples, when they arrive here, are carefully assorted. The best are put into half-barrels, the second grade into barrels, and sent to Liverpool, London and Glasgow, while the lower grade of sound ones are sold to the jelly-makers and the decaying ones to the vinegar-makers.

Why Ireland Wears the Green.

London Truth, October 27.

In your note on the Order of St. Patrick in yesterday's issue of your paper you suggest that the existing blue ribbon should be changed for a green one, on the ground that such an alteration would be well received by Irishman. Will you allow me to point out that this suggestion arises from a totally unfounded, though very common, belief that green is national color of Ireland? The truth, however, is that green was never heard of as a national or party color till 1798, when the United States Irishmen adopted it for the following reason: The ancient flag of Ireland was a golden harp on a dark blue ground, as now depicted or emblazoaed in the Irish quarter, the third, of the Royal Standard, and the revolutionary leaders being anxious to unite together all classes of Irishmen, being in that respect the exact converse of the present agitators, and to join the Orangemen to the rest of their fellow-countrymen adopted green as their distinguishing color, which is of course produced by mixing together gold and blue. At the time, therefore, of the institution of the Order of St. Patrick, in 1783, the only and undoubted national color was dark blue, and that would probably have been the color of the Ribbon but that it had already been appropriated by the Order of the Garter, which was originally blue, but had been altered by the Hanoverian monarchs to its present color to distinguish their knights from those whom the two Pretenders continued to invest with the old light blue ribbon. [Hence, by the way, the expression "True blue."] Under these circumstances it was originally proposed that St. Patrick ribbon should be orange, but as this would have savored too much of party, it was ultimately determined that it should be the old color of the Garter—light blue. Yours, M.

A Tenement House Tumbles and Buries the Inmates.

NEW YORK, Nov. 9.—At fifty-five minutes past six o'clock this morning a three story tenement house at the south-east corner of South 5th Avenue and Grand street fell in, burying the occupants in the ruins. The fire department were immediately summoned and up to this hour they, with the assistance of citizens, had extricated five of the victims from the debris. The life of two was extinct and the others were seriously injured. How many were in the building at the time of the accident is not yet known. The work of removing the debris is being pushed with all speed.

In the matter of disordered nerves, Boston girls suffer no more than those of other cities. There are painful sensibilities that nothing can cure so thoroughly as Dr. Benson's Celery and Chamomile Pills, and every nervous girl should use them.

New Bloomfield, Miss., Jan. 2, 1880.

I wish to say to you that I have been suffering for the last five years with a severe itching all over. I have heard of Hop Bitters and have tried it. I have used up four bottles, and it has done me more good than all the doctors and medicines that they could use on or with me. I am old and poor but feel to bless you for such a relief by your medicine and from torment of the doctors. I have had fifteen doctors at me. One gave me seven ounces of solution of arsenic; another took four quarts of blood from me. All they could tell was that it was skin sickness. Now, after these four bottles of your medicine, my skin is well, clean and smooth as ever. HENRY KNOCHE.

NOTICE.

—TO THE PEOPLE AROUND—

HUNTERSVILLE, COWAN'S FORD and RANDLESBURG,

we would respectfully call your attention to the fact that we have goods to SELL and all we want is for you to come with the money. If we have the kind of goods you want we will sell to you. All you have to do to get goods cheap is to Jew at us a little. We don't intend to let Charlotte, or any other place, undersell us just now for cash. We know that you will not find as many goods with us as in Charlotte, yet we may have as much as you will want and will sell to you at your prices, if we can't get ours.
