ule will be run over the road after the 1st of May. Last week a child about seven months old was so badly burnt that it died in three hours after the burning. Its mother, Mrs. A. L. Stokes, so it is said, had left it on the floor, and had gone to get something for dinner, or to get wood to put on the fire, when she found

the weather boarding had been taken off, had his back broken the falling of the building upon him. Dr. O'Hagan made an examination as to his injuries, and he gave it as his opinion that the back was broken, and that if the doctor got well he would be a cripple for life. It is thought that the spinal cord is un-injured. Later—Tuesday the condition of the doctor was not so well.

Our Forests.

Louisville Courier-Journal. The Forestry Congress, which will meet at Cincinnati on Tuesday, the 25th inst., will discuss the very important subject of preserving and renewing American forests, a subject which we have discussed very often and one which can not be too often or too earnestly brought before the people. Just to give a general idea of how the for-ests in this country are disappearing, we quote the following from a recent

paper on the subject of our forests by Gen. Brisbin: "Last year there were 101,000 miles of railway in this country, and this year we are building 16,000 miles of new railway. All these roads have to be tied with comparatively young timber. I have not at hand an estimate of the number of ties used per mile, but the annual consumption is very large. Some years ago, to build 71,000 miles of railway required 184,600,000 ties. Ties have to be replaced every seven years, and it is fair to set down the number of ties required annually for future consumption at 160,000,000. As every one knows, railroad ties are cut from young timber, the trees being from eight to twenty inches in diameter, and this demand strikes at the very source of our timber supply. It is a fact that the fences of the United States have cost more than the land, and they are to-day the most valuable class of property in the United States, except buildings, railroads and real estate in cities. To keep up the fences requires annually an enormous consumption of timber. The

125,000 farms in Kentucky require 150,000,000 panels of fence to inclose them.

The number of rails required is set down at 2,000,000,000, costing \$75,000,000.

To repur and keep in good order the fences in this one State alone costs annually 10000,000. Illinois, a comparatively new State, has \$200,000,000 invested in fences, but it costs her only about \$200,000 annually for repairs, many of her fences being constructed of wire. The whole value of the fences in the United States may be set down at \$2,000,000,000, and it costs \$100,000,000 annually to keep them in repair. The city of Chicago alone last year employed 17,800 men in handling lumber. There were 500 clarks, 4,000 wood workers, 2,000 saliors, 1,000 men to load and unload the vessels, and 10,000 men to handle and prepare the lumber for marhandle and prepare the lumber for mar-

ply ever diminishing Between the Goldsboro Messenger: Mr. A. G. Bass, a carpenter employed by Mr. Harding, on the W. & W. railroad warehouse, fell off the roof Monday, breaking his elbow and being otherwise painfully injured.

Ply ever diminishing. Bet ween the two the end must come soon and the grand old forests disappear. After the Saginaw, Muskegon, Menomonee, Manistee and Ludington sources are exhausted, the Rocky mountain slopes and Washington Territory will be stripped of their forests, and then we will have all that is worth taking. Every year we demand 8,000,000 acres of trees and plant less than 1,000,000 to replace them. The end is so plain, even a fool may read it as he runs.

may read it as he runs." Not only is forest renewal necessary for building and industrial purposes, but this vast destruction affects all our fivers more or less and the regularity and duration of the rainfall. If nothlast night was critical in the extreme ing is done to remedy the evil, large and his friends have little hope of his portions of our country will inevitably portions of our country will inevitably become as sterile as Sahara.
