## GEN. COX'S BILL

ON CIVIL SERVICE REFORM.

**Some of the Details of the Proposed Measure---Modifications Suggested in the Revenue Laws ---Personal, &c.**

Correspondence of THE OBSERVER.

WASHINGTON, March 15.—On tomorrow Gen. Cox will introduce the following bill: To secure an equitable classification and compensation of certain officers of the United States, which it is proposed to have referred to the committee on reform in the civil service. It is in six sections. The first section reads: That the President is authorized to employ three persons not in the public service of the United States, and to designate two additional persons who are officers in such service at Washington, not more than three of whom shall be adherents of the same political party, which five persons shall constitute a commission for the purposes of this act, and the President may fill any vacancies therein.

Section 2. It shall be the duty of said commissioners to prepare and submit to the President a report or several reports, in case of a difference of opinion among the commissioners, for transmission to Congress by him, on or before the first day of the next regular session of Congress, upon the proper classification, compensation and numbers of officials to be employed, and showing the number employed at the date of their report, and their salaries and compensation respectively, in and under each of the several departments, separate offices and commissions in the executive civil service at Washington. Such report or reports shall contain one or more arrangements of such officials into appropriate classes, stating the salary or compensation proposed for those of each class, and give the reasons upon which the recommendation for such classifications, salaries and compensations respectively are based.

Sec. 3. Such classification shall not extend to officers confirmed by the Senate, nor to laborers or other persons who are neither appointed to nor perform clerical duties, but it shall include all persons who perform duties of the kind now performed by those embraced in any existing classification; and the classification shall be equally comprehensive, and the compensation of those embraced in them shall, so far as practicable, be uniform in the several departments and offices for day work of the same kind.

Sec. 4. The report or reports shall also set forth the practice as to substitutes, furloughs and leaves of absence in such service, and in what respect, if any, such practice may be improved; and whether, with advantage, and upon what conditions a clerical force may be provided, the members of which serve from time to time in different departments and offices, as the exigencies of the public business may require.

Sec. 5. That the members of such commission who are not in the public service, and a secretary they are hereby empowered to appoint, shall be paid for their services and expenses such sums respectively as the President may approve out of any money which may be appropriated for such purpose.

Sec. 6. The heads of the departments, offices and commissions herein referred to shall allow such commissioners all reasonable facilities, and give them the proper information needed in the discharge of their duties hereunder, and may detail from their several departments such persons to perform clerical work, in connection with the duties of such commissioners, as may be necessary.

An additional section in blank will probably be added concerning the salaries of the commissioners and secretary.

This is the bill recently referred to in this correspondence. It is a measure of the very highest importance. Gen. Cox showed it to a number of members or stated very fully its principles. Among those, he informs me, were the Speaker, Messrs. Morrison and Reagan. Those gentlemen all agreed that this bill was the very thing desired to perfect practical reforms in the civil service. Gen. Cox insists, it will be seen, on two leading points in this bill; a commission composed in part of officers in the service and on a more thorough classification. The first classification was in 1813. This lasted until 1856. A broader and more business like classification is now demanded. I regret that the great number of other things necessary for this letter prevents my enlarging on the views very clearly and elaborately presented by General Cox this noon. I may do so hereafter.

Three North Carolina members will introduce measures either tomorrow or next week to further execute their purpose to ameliorate the harshness of the internal revenue laws. But for the death of Representative Hahn today those bills would have been brought in this morning and a statement of their points would be permitted in this letter. I shall give this statement probably tomorrow. It suffices now to say that one of these bills will relate to the penalties under the law, and another to the law itself.

The Education Bill will come up in another form in the House. Mr. Willis, I hear on the best authority, will on tomorrow re-introduce his bill, modifying some of its features for the purpose. It will then be referred to another committee, the object being to secure a favorable report which is thought impossible from the Education Committee. The idea still is that the House is favorable to the measure.

Collector Yarborough was here on Saturday. I understand he succeeded in getting off several persons guilty of violation of that part of the Internal Revenue law which effects the small distilleries. Legislation on this matter is very much needed. But pending that, it is pleasant to see that the Democratic administration is not disposed to furnish men who are only technically offenders. The officers of the Bureau hear all such cases and determine them on their merits, without much hesitation.

Dr Robert S Hester, of Caswell county, has been appointed Government Physician at the Pawnee Agency, Indian Territory, through J W Reid. Salary $1,000 and house.

Also, Mr W F Gilmer, familiarly known as "Dixie Gilmer," of Mount Airy, Surry county, has been appointed postal clerk on the Cape Fear and Yadkin Valley Railroad, vice Mattie D Moore, resigned.

Judge Bennett obtained leave of absence Friday on account of illness. He has returned home.

Mr Skinner is also to be absent for a few days.

Col W F Beasley is here.

**Schaefer Again the Victor.**

Philadelphia Times.

Jacob Schaefer has again proved his right to the claim of being the champion billiard player of the world, having in a five night game defeated M. Vignaux by the remarkable score of 3,000 to 1,855. The game itself was the three ball, eighteen inch balk line, the most difficult one now known, and yet, in spite of this fact, Mr Schaefer scored 230 points in a single inning, thereby beating all previous records. M. Vignaux's highest run was only 108.

It is only a few years since to score 230 points at the old four ball game was considered very remarkable playing, but the art of nursing along the rail soon made it necessary to take off the fourth ball in order to keep down the scores, and this being found powerless to prevent long runs, the fourteen inch balk line came into use. Even this was ineffectual, and so the prescribed space was increased to eighteen inches, with what result the latest contest shows.

The only other player in the world whom Schaefer has to fear is George F. Slosson, of Chicago, and him "the Wizard" has already beaten on possibly a half dozen occasions. The victory over Vignaux will be most gladly hailed, because the element of nationality entered into the contest. M. Vignaux is a great player, but Schaefer is undoubtedly greater.

**Death of Commander Waddell.**

ANNAPOLIS, MD., March 16.—Capt. James I. Waddell, commander of Maryland fishery forces, died last night at his home in this city of congestion of the brain. He was a native of North Carolina, and was 62 years of age.

Capt. Waddell graduated at the Naval Academy in 1840, having previously served at Vera Cruse against the Mexicans. He served in the United States Navy until the rebellion broke out, when he resigned and entered the Confederate Navy, being placed in command of the famous Shenandoah, with which he waged war against vessels in open seas destroying much valuable commerce.

**A Costly Funeral Train.**

WASHINGTON, D. C., March 15.—It is estimated by Senate officials that the cost of the special train carrying the remains of the late Senator Miller to California will not be less than $20,000. There is a good deal of comment over the fact that while all the members of the House Committee felt able to leave with the remains, only one member of the Senate Committee—Jones, of Nevada—was willing at the last moment to leave.

**The Cluverius Case.**

Richmond State.

It will be one year tomorrow since Fannie Lilian Madison met her fate. Cluverius, who is under sentence of death for her murder, is still apparently in good spirits. He passes the time away reading newspapers and books, and walking about the jail yard. His aunt, Mrs Tunstall, has not been to see him for a month. His brother was in the city two weeks ago. His case will come up in the Supreme court on the 29th of this month on a motion for a new trial.

**Scott's Emulsion of Pure Cod Liver Oil, with Hypophosphites.**

Especially Desirable for Children.

A LADY physician at the Child's Hospital, at Albany, N. Y., says: "We have been using Scott's Emulsion with great success, nearly all of our patients are suffering from bone disease and our physicians find it very beneficial."

**Not Symptoms, but the Disease.**

It would seem to be a truth appreciable by all, and especially by professors of the healing art, that to remove the disease, not to alleviate its symptoms, should be the chief aim of medication. Yet in how many instances do we see this truth admitted in theory ignored in practice. The reason that Hostetter's Stomach Bitters is successful in so many cases, with which remedies heretofore tried were inadequate to cope, is attributable to the fact that it is a medicine which reaches and removes the causes of the various maladies to which they subject. Indigestion, loss of appetite, liver complaint, gout, rheumatism, disorder of the bowels, urinary affections and other maladies are not palliated merely, but root'd out by it. It goes to the fountain head. It is really, not combating a radical remedy, and it endows the system with an amount of vigor, which is its best protection against disease.

## TALKING BY WIRE.

**TALKING OVER A WIRE WITH PEOPLE MORE THAN TWO HUNDRED MILES AWAY.**

**A New Invention Which it is Claimed Solves the Problem of Oral Communication at Long Distances--The Principal Cities to be Connected with Each Other by These Telephones.**

New York World.

"Hullo! Hullo!"

"Who are you?"

"A reporter for the World. Who are you?"

"I'm the World correspondent at Washington."

The reporter was in the office of the United Lines Telegraph Company, in this city, and the correspondent was at Willard's hotel, in the capital of the United States. The conversation was the first public communication held orally between the two cities. The distance is 238 miles. The means by which it was carried on was a telephone equipped with the multiple transmitter, patented by William C. Turnbull, of Baltimore, Md., on February 23, 1886. There were, at the New York end of the wire, Mr. C. T. Barberie, chief electrician of the United Lines Company; Mr. W. L. Paine, who controls the Turnbull patent; Dr. H. E. Waite, an expert electrician, who had control of the test, and a large number of reporters. Mr. A. W. Rose, an associate of Dr. Waite, had charge of the test in Washington, and at his end of the wire were a number of friends: Gen. A. J. Warner, of Ohio; Sir Alexander Stuart, Prime Minister of Australia, his son and Mr. John Adams, of New York; Congressman James Floyd and Col. Thomas Cox of Chicago; Sec. Cowl, of the Signal Service Bureau; George B. Corkill and sixty correspondents, representing all the leading papers of the country.

The first message sent over the wire was the following, from the World correspondent:

"It is expected that the examination of Dr. Rogers and of Col. Casey Young will occupy the greater portion of this week in the Pan-Electric investigation. Attorney General Garland and Senator Harris, of the officials interested in the Pan-Electric organization, are not subject to the subpœna from the House Committee. They will simply be told that they have the privilege of appearing before the committee to make any explanation they may see fit. It is believed that they will promptly accept the committee's invitation. Gen. Joe Johnson and Commissioner Atkins are subject to subpœnas, and will doubtless be called as ordinary witnesses. CRAWFORD.

Expert Waite took the telephone and conversed with the junior Dr. Rogers, the inventor of the Pan-Electric system.

"How is the Pan-Electric?" he was asked.

"All right," was the response, "but beware of the Garland of victory."

"I see they are booming you in the comic papers."

"How can I help that?"

"You can't. But tell me, are you connected with the Bell Company, as they represent?"

"Don't ask me; ask the old gentleman."

Dr. Rogers, Sr., who works the oracle, took the place of his son, and said:

"I give you as if you were only two feet from me. I believe you're in the next room.

"I'm in New York," said Dr. Waite; "over two hundred miles away."

"This is a bully telephone," continued the doctor. "It's worth $20,000,000 a year."

"If you had it you'd make it worth $50,000,000. Good-by."

"Who is this? Dukes, of the Boston Post? Hello! I'm fond of Boston men. About six months from now we'll have a telephone from you to the home office. How do you like that?"

The Boston man objected. He said he feared he would be called up too often at midnight. Then Dr. Waite asked a Baltimore correspondent how the girls were in his town, and learned that they were as charming as ever.

Prof. W. J. Green, of the Smithsonian Institute, asked to communicate with the World reporter.

"What do you think of the test?" he was asked.

"It marks an era in the history of electrical science," he answered.

From a score of people it was learned that the weather in Washington was exceedingly mild and pleasant, and on inquiry they were informed that the same condition of things existed here. President Cleveland, it was stated, was well, and intended taking a ride later in the day. A correspondent of a Chicago paper inquired after the health of "Jake" Sharp, and wanted to know if "Billy" Maloney had returned to the city. He was informed that Jacob was doing as well as could be expected under existing circumstances and that Mr. Maloney was expected home some day.

Dr. Waite explained the principle of the multiple transmitter to a reporter of the World. "The object of the invention," said he, "is to provide a transmitter having a large capacity for transmitting electrical undulations corresponding with the waves produced by sound, and at the same time one that will not require special adjustment, but one that will always remain in good working condition. It differs from the Blake transmitter in that the carbon in the latter has but a single point of contact, while this which we have been using has twenty. The sound is increased in proportion to the number of points of contact. Our invention is simpler and cheaper than the Blake transmitter.

"An electrode is the surface by which electricity passes in and out of other media. We claim as our invention the combination of our diaphragm, the electrode carried thereby, the pivoted pendent carbon electrode which make contact with the electrode of the diaphragm and a carbon pivot on which the electrodes are mounted; also the combination, in a transmitter, of a swinging, hinged or pivoted carbon electrode and a carbon pin or bearing on which it is hinged. We further claim the combination of the diaphragm—a series of pivoted, pendent swinging electrodes, formed of cylindrical pieces of carbon, which are perforated at the ends to form their bearings, the carbon rod on which said electrodes are pivoted and an opposing electrode upon which they rest by gravity.

"It will be only a few weeks before we have the World conected by telephone with Washington, as well as other cities, if we realize our anticipations."

dec12dead&w6m.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my Infallible remedy. Give Express and Post Office. It costs you nothing for a trial, and I will cure you. Address Dr. H. G. ROOT, 183 Pearl St., New York.

CONSUMPTION.

I have a positive remedy for the above disease; by its use the most inveterate cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease to any sufferer. Give express and P. O. address.

DR. T. A. SLOCUM, 181 Pearl St., New York.

METAL POISON.

I am a coppersmith by trade, and the small particles of brass and copper from filing got into sores on my arms and poisoned my whole system. Mercury administered brought on rheumatism, and I became a helpless invalid. I took two dozen bottles of Swift's Specific. My legs, arms and hands are all right again. I use them without pain. My restoration is due to S. S. S.

Jan. 9, 1885. PETER E. LOYE, Augusta, Ga.

MALARIAL POISON.

We have used Swift's Specific in our family as an antidote for malarial poison for two or three years, and have never known it to fail in a single instance.

W. C. RUBLOW,
Sumter Co., Ga., Sept. 11, 1884.

ULCERS.

For six or eight years I suffered with ulcers on my right leg. I was treated with Iodide of Potassium and Mercury, and I became helpless. Six bottles of Swift's Specific made a permanent cure.

L. D. WILSON, Gainesville, Ga.

February 28, 1885

Swift's Specific is entirely vegetable. Treatise on Blood and Skin Diseases mailed free.
