goose and fowl. Blackbirds were classed considered invalid. But the hardship of the cases, which frequently occurred, where by Cranmer among choice articles of food. and cranes, herons and curlews were eaten the widow marrying again, took the properin the middle ages. If we look at the habits ty to a new family of children, who had of various nations with regard to diet, we none of the blood of the original deviser, can hardly discover anything belonging to induced the courts to wink at a restriction. though, for the sake of consistency, they the animal or vegetable kingdoms that has not been, at one time or another, used as were forced to compel the use of a differfood. Experience also has taught us what ent phraseology, such as "durante viduikinds of food are most nutritious, and tate," that is, "during widowhood." A science has explained why they are so .--"condition precedent" is now known, by every sound lawyer, to be worthless in a will. If the widow is to be prevented from

The first great principle in regard to food seems to be that, as the constituents of the blood may be arranged in the four clases of water----salts---substances containing nitrogen, as the albumen and fibrin of the

muscles, and substances containing no nitrogen, as fat-so in food the same four constituents should be present, for the substances cannot be converted into each other. All four are contained in animal and vegetable food, and in milk. The similarity in composition, between fat and sugar and starch which form the chief part of vegetables, has long been known to be very close, but it is also discovered that vegetatermined the exact meaning of every word bles contain a substance identical with the to be employed, and of every collocation of albumen and fibrin of the blood. These elements. however, are in different proportions in different substances.

> From the fables, that Hercules lived on beef and figs, and that Chiron fed Achilles, in his infancy, upon the marrow of lions and bulls-we see that the ancients had a correct notion of the value of animal food. To do work, food rich in nitrogen is requisite. Highest in this scale stand the flesh of the mammalia; that of a darker meat; the flesh of birds and fish is less nutritious than that of animals. Neither capable of affording proper nourishment .--of live stock. Fowls are fattened for the York Paper.

London market by being confined in the dark, and crammed with a paste made of oat meal, mutton suet and molasses, or coarse sugar mixed with milk. On this diet they are ready in a fortnight, but cannot well be kept longer. The influence of external temperature, excess of food, and want of exercise upon the condition of the liver, is seen in that especial delicacy-foie gras. The goose destined to furnish the luxury is shut up in a basket where it cannot move, kept in a room highly heated and assiduously stuffed with food. There is a hole in its prison through which it

came to a dead halt; the driver dismounted opened the door and requested us to descend. We did so, supposing that some accident had occurred. When we were all out, standing on the ends of the logs of which the road was made, the driver took off his hat and said. "Gontlemen, we stop here out of respect for the Governor: this is the identical spot where Marcy tore his pantaloons !"

The story was heard with great gollification, in which no one joined more heartily than the Governor himself.

The vantation incident deserves to be ecorded in every history of this great man. He was sent out to hold special sessions of court to try the Anti-Masonic parties charged with murder. He was to receive a salary and his expenses. With that nice regard for details that belonged to his sterling character, he kept a minute account of all his expenditures, and handed in the list on his return, without thinking it necessary or proper to revise and strike out those items of a private nature which other men, less scrupulous in greater matters, might have carefully suppressed. There stood the tailor's charge for mending. The political foes of the judge, when he came to be a candidate for Governor, found it, and paraded it before the world in the

newspapers; and making an effigy of Mr Marcy, suspended it in the streets of Albany, with a great patch on the pantaloons and the tailor's charge on the top of that ! A story is told of him and his friend Gen. Wool, which possesses some interest at the present time. Forty years ago, Gen. Wool was a dry goods merchant in Troy. color is rather more nutritious than white Having failed in his business, he was in doubt whether to study law or pursue some other career; and having great faith in the albumen nor fatty substances are alone judgment of young Marcy, with whom he was intimate, he referred his difficulty to Animals fed on fresh butter, lard and fat, him. Marcy unhesitatingly dissuaded him have died starved, though in a remarkable from studying law, and advised him to apstate of embonpoint. It is probable that ply for a company in the new levies which fat and other non-nitrogenous substances were being made to prosecute the war. merely serve for the purpose of respiration | The advice was followed; and hence, thro' by means of their carbon. The effect of Mr Marcy's counsels, the city of Troy has an abundance of fatty and vegetable food lost a respectable lawyer, and the country in producing fat, is familiar to every owner has gained an admirable officer .- New

VALUE OF THE SOUTH .- The New Orleans Delta estimates the number of slaves at the South at over three and a half millions, and their aggregate value, at present prices at fully sixteen hundred millions of dollars, The cotton plantations in the South it estimates at about eighty thousand, and the aggregate value of their annual product, at the present prices of cotton, is fully one hundred and twenty-five millions of dollars. There are over fifteen thousand tobacco plantations, and their annual products may be valued at fourteen millions of dollars .--coal and water.
