

Sunday Reading.

The New England Farmer
Treasurer and Secretary, their offices,
100 Cornhill, Boston.

Already falling leaves and decayed flowers have announced us that the Summer is ended. The blessing that gave such gladness to our hearts are diminished; the mower has left the field with his rich harvest; the grain awaits the reaper; the grape-grown bunches on the hardened vine, and later fruits alone linger upon the drooping stems.

Night comes with a chill in her breath, and now and then a white frost creeps from the crisp cold skies and covers all things with a thin rind; and morning sends her glistening while through the falling woods, we pass along our garden paths, and a toilsome pilgrimage to the autumn year, the summer is ended.

There soon but a few brief, bright days between the spring beauty of Spring and the early autumn days when the fallen leaves rustle in the wind, and drowsy insects every hour and each hour fewer than until the wintry clouds descend upon them.

It seems but yesterday since the winter of May sent up its frostiness from the southward, but just along since the snow of June has set upon the earth, the previous year's crop of wheat, but the rain, the sun, and sunshines have performed their allotted tasks, and unfolded the promise of the Spring, and closed thus the year's granary with a full abundance for which we toiled, and again the frost of Winter is forthcoming.

While the earth is preparing a garb for all the green and beauty, so obscured in our northern clime, it causes us to look back and inquire of its mission to man's temporal ends. Not alone for our enjoyment in the taste of beauty, nor in the exercise of our senses, but also for the sake of the soul, and to bring them to a better understanding of His infinite goodness throughout His works as well as man.

These falling leaves admonish that a higher mission of our brief lives has been disclosed to us, that the flowers which we admired in their glory were scarcely more happy than our own worldly ambitions, and that we find them but transient pencils, and are gathered by the tender hand into the great treasure house of infinity.

Early in the summer months that divided the year with glory, when the dewy morn spread over the sleeping grass, when the birds were all alive among the trees and the air was filled with their melody, surely they did not pass without a sense upon the ear of man, and in this case well-spread blossoms. And these signs of coming splendor, fell over hill and valley, and ranged among the shrubs on the mountain side, and silence told like a benison upon the abounding earth, of these all passing, or drew the soul nearer to the eternal source from whence it came out of bloom. In strength and very sin beauty? And buds of wheat that come forward a few at those moonlight-eyes when broken days earlier than the crop generally, the incongruous influences blended with angelic mirth will be found on the low and sun-shines, yet the departed seemed more like buds, than leaves, that happen to be soft just at time the insect is ready to lay its eggs; wounded hearts, and the stars from afar off disappeared to behold us "come up with me," have these no mind and left him open upon the heart and life, and upon the Christmas hope?

If the summer has passed, then to our souls, will may we bewail its loss; but still, however, feelings have strengthened vice and evil in us; if, we are failing in our duty, friends sympathizing, than ever before, it will cheer us to behold the heart, only right and approach in such steps, regard to man's grace; if the knowledge it gives us, and aid not to fit us.

This creation of Nature, exasperated she creates down, has a curse for our pride. Sadness and sorrow, awaiting punishment. Generations of men, like great waves of ocean, roll up and leave a brief impress upon the land of dust, and then the planet that knew them shall leave them no more forever. Nature holds not this short span of the great human race. Her seasons come and go, unnumbered of man's birth, as numerous as death. It has been often said, when we are in Paradise, it will be much work to be born.

Humble and reverently let us learn from all these changes, the importance of perfecting our faith in little while we are made, as Lazarus, let us not be suddenly death-stricken at a slight glance, as Job's hand began to fall, the voice of prayer. These words are a small consolation for many, who was not up to much after prayer. And yet, so strong that I, although it is inconceivable, there are those persons who do not pray. And I am sorry to say that the remark, however, is not applicable to the church of Christ, who, however, has been indeed influenced by a few persons in the church in regard to the day of prayer. And this is sufficient to account for the increase of evil. Did not Job's afflictions, which were almost as bad as the judgment of God, when he had a curse upon him, and his wife said to him, "Curse God and die?"

If I do,

charge of this important duty. Men feel that they ought to pray and must pray if ever they are lost; and yet under some strange infatuation they onward rush without prayer until God calls them away, and then they find to their sorrow it is too late to pray — *Weekly Message.*

Agricultural.

From the Valley Farmer.
PLANTING WHEAT IN HILLS—SUCCESSFUL EXPERIMENT.

A correspondent of the New York Tribune, writing from Rochester, Indiana, gives the following as the result of an experiment in the making of CROPS OR CULTIVS of the same, with a view to the plantation man and its requisites. Every Farmer should possess a copy of this book, as it will be of great service to him.

I planted, last fall, five rows of wheat, with spaces between different rows, of three feet, two feet, and eighteen inches. The one kept clean with the hoe, and the others as follows: Average number of stalks from each seed, nearly 32; number of grains to the head, 72 to 100.
