LETTER FROM PROF. EMMONS ON FERTILIZERS. ROXBORO', Person Co., Oct. 20, 1854.

To His Excellency, DAVID S. REID: It may appear paradoxical to maintain that a planter may diminish his crops by the use of fertilizers, still I shall attempt to show that such a result is possible. Theoretically and practically the doctrine is both interesting and important. It is founded upon principles which I have had occasion to state while speaking of manures and fertilizers. The doctrine alluded to is based on two facts, viz: that each plant requires certain inorganic elements for its growth and perfection of seed, and that the most important of these elements exists in the soil only in smaller proportions. Now a plant, in certain respects, is like an animal. If a young but a sickly existence that is not endowed, or an old animal is supplied with a large quan-or the support of its teachers guaranteed by tity of food its growth is promoted, or its fat accumulates. This is the case if the food contains all the elements of nutrition. It is not the case, however, if one or more of them are wanting. In the case of a young animal, for example, the milk which is the natural food contains in its normal condition every element which the system requires; but if the milk should be deficient in phosphate of lime or phosphoric of acid, the animal could not grow, or if it did grow by means of a small amount of phosphoric acid or phosphate of lime, the bones would be soft and flexible. But this is not the point I am attempting to prove or clucidate, and the allusion is made merely for the purpose of stating the fact, that in the food of both animals and plants there is a speciality which should be remembered by all planters and stock-growers. But plants are unlike animals in certain respects; their mouths, for instance, are placed in a magazine of food, but this magazine may contain a rich supply of certain elements of nutrition and a very scanty supply of others; but enough of all for the present to ensure the growth of the plant and perfection of the seed. If now the planter resorts to the use of the mineral fertilizers, as plaster, the result will be for the first two or three years a greater growth of herbage as well as a greater increase of fruit or seed. If this magazine of food (the soil) contains a small quantity only of phosphate of lime, the employment of plaster or sulphate of lime puts the plant in a condition to use and take up a larger amount of phosphate of lime than it could, provided this mineral had not been employed. If this magazine contained than five with it. By the use of this fertilizer and cherished. the root is increased in extent, and to speak the perfection of seed, the time soon comes occupy four years, and the Faculty to grant when seed cannot be perfected for the want of Diplomas and confer Degrees, as at the Unione element. The general effects of such a sys- versity. tem of culture is seen at once, and yet the This is the kind of education wanted !--it Durham Cow, "Bettie Bliss," 7 years old, planter may persevere in it for he saw in the will furnish the State with a corps of efficient Mrs E L Taylor, Raleigh, 2d premium, beginning most gratifying results: his crops Engineers for works of Internal Improvement, may have been doubled, and in order to keep and able Geologists to aid in discovering the 1 Pair Lambs, 5 morths old, R A Jenkins, up, and perhaps attempt to increase the pro- hidden mineral wealth of the State, and be the duction still more, supplies his favorite fertilizer means of giving instruction to the great body after the second and third year, that its employ- fence of the State and its Institutions. ment did not turn out so favorably as at first. But briefly the "plan," as follows: This result may be attributed to the season, it was too were of too dry, too hot or foo cold, or tial elements of fertility. It is evident enough establish the School in the Arsenal buildings, he can no longer use plaster-he must find out at Fayetteville.) what has become deficient in the soil. WEST POINT. but it is not by a reapplication of the same fertilizer, even Guano. Now, the planter may why?-it is because these contain a greater Treasury all tuition fees. variety or number of the elements of food which the plant requires. The intelligent English farmer applies lime largely once; by this, he obtains a stock in trade to go on-he borrows largely for once, and by it is enabled, if he understands the principles of husbandry, to pay back what he has borrowed. But he would not think of paying back in lime-that would ruin him; but he is now prepared for the use of the combined, and by thin use he may go on without killing his soil. So Guano is to be used once to save time and prepare the way for the less active fertilizers. The vender of this article will tell a different story, for it is a perishable article and must be sold the first season; for the reason that they will regard themselves 1 set double Harness, Hardy Harriss, but the intelligent planter will find that he can as the representatives of the anti-slavery sentigo on successfully by one application and save ment.

Most respectfully, yours &c. E. EMMONS, State Geologist.

The President and Directors of the Literary Fund having made distribution of the nett income of said Fund for the year 1854 among the several Counties of the State for Common Schools, have directed the following 3 Tabular Statement to be published, showing the Spring and Fall distribution to each County, and the sum total distributed during the year. The amount of the Fall distribution will be paid to the persons entitled to receive the same on application

to the Treasury Department. The Counties of Jackson, Madison and Yadkin will receive their portion from the Counties from which they

were respectively formed.

. 5	The public Tr	easurer will pay	to the County of	Yadkin seventy-fi	ive dollars, which	was erroneous	ly deducted
p.	Blind; and will	also pay the sun	n of seventy-five d	I charge the same ollars to the Coun	ty of Burke, whi	ch was erroneou	sly deduct-
р.	ed from the share of that County in the year 1853.			DAVID S. REID. Pres. Ex. Of. Lit. Fund.
