A Bird's Barbed Wire Fances.
There may be seen along the confides in Central America a brown wren about the size of a canary which builds nest out of all proportion to its apparent needs. It selects a small tree with horizontal branches growing close together. Across two of the branches it lays sticks fastened together with tough fiber until a platform about six feet long by two feet wide has been constructed. On the end of this plat-form nearest the tree trunk it then builds a huge, dome shaped nest a foot or so high with thick sides of interwoven thorns. A covered passageway is then made from the rest to the end of the platform in as crooked a man or the platform in as crocked a man-ner as possible. Across the outer end as well as at short intervals along the inside of this termed are placed cun-ning little fences of thorns with just space enough for the owners to pass through. On going out this opening is closed by the owner by placing thorns eross the gateway, and thus the safety of the eggs or young in assured. Harper's Weekly.

REAL BRAVERY IN WOMEN.

Remarkable Courage Shown by Fa mous Heroines of History.

No one can doubt that moral courage is superior to physical. Men exceed in the latter, women in the former, and it is not desira-ble that this should be altered, even were it possible. Yet it would add to the dignity of both if men were stronger morally and women physically.

A modern historian says: "Moral and rational faculties may alike be dormant, and they will certainly be so if men are wholly immersed in the gratification of their senses Man is like a plant, which requires a favorable soil for the full expansion of its natural or innate pow ers." If men had been shut out, as women have, from the exercise of their physical faculties, is it certain they would have developed excess of physical powers?

Notwithstanding her social disadvantages in this respect woman has made her mark in the annals of bravery. History affords numerous examples of great heroines, man of them, too, at a time when the general position of women was that of slaves, but we can only note a haena of Attica bore the severes

torture without a word; Telesilla the poetess, made the Argolic women use them a good deal. Quaintly men fearless of death and discom fited the Spartans; Theodora saved the eastern empire; Artemisia drank the ashes of her consert: Camilla. ian help on what they have to say queen of the Volscians, was slain fighting at the head of her troops; Boadicea encountered the veterans of Rome; the Maid of Orleans drove the English from France; Arris stabbed herself to encourage her husband to die. "See, it does not hurt, dear Paetus," she said.

The tales of martyrdom are fertile of heroic women. Young maidens met the most horrible deaths with placid contempt, if not with vehement joy. No fiendish tortures that devils could devise were able to shake the fortitude of numberless brave women. Whether under Nero or the bishops, under the in-quisition or the French revolutionaries, it was noted with surprise and admiration that the women died more bravely than the men.-Mexican Herald.

"What is a vigor?" his mother asked.

"You know, mamma, it was you that read it to me out of the book."
"But I don't remember reading "Yes," I said. "But I thought I saw him going in your back gate last one if I did. What did the book

say about it?" "Yes, you remember it. It said the boys returned from their bunting trip very hungry and were glad to find the meat done and the cook mashing the potatoes with vigor." And then the mother found out what the lad wanted. It was the wooden pestle with which she mashed potatoes-Milwaukee Free

The Foam on Soda Water. Foam is a natural product, being caused by the escape of air or gas from a viscid liquid. In the case of soda water it is the escape of the carbonic acid gas from the sweetened beverage that causes the attractive sparkling appearance, but the sweetened water alone would give rise to but a small quantity of oam, as the gas would too easily escape. In order to prevent this some mucilaginous substance is usually added to the sirup, which renders the mass more viscous, so prevent-ing the gas from escaping and pro-ducing the attractive head of foam so familiar to all.

The Ever Active Brain.
The question, "Boor the brain ever rest?" would been to be answerable only in the negative. Unconscious

cerebration appears to be a necessary concemitant of the powers of intellect and during sleep, whether we remember it or not, we are always dreaming. Of course, during waking time we are perpetually thaking, thinking—hot always logically and deliberately, but, all the sums, thinking. Dream is the thought of the sleep time, when reason is out of the game, and the fancy, or imagnation, has the reins, with nothing to hold her back. We take many a trip under her guidance that we are unable to recall when she has resigned the reins liste the hands of reason. Awake or natesp, we are always hear. Racing In Queen Anne's Time Racing is a very different affair from what it was when Queen Anne, most sporting of English queens, instituted Ascot races and ran her famous horses, Mustard, Pepper and Star. Horses intended for racing were always kept tight-ly girt, with the idea that it rendered them more swift, and, as for feeding, the old time trainer believed in giving them a liberal amount of soaked bread, supplemented a day or two before the race with fresh eggs. And the jockeys instead of sporting light silk jackets were incased in full suits of the stiffest taffeta, while, as if the applause of the crowd were not considered sufficient, drums and trumpets greeted

Lives of Animals.

Animals vary greatly in the length of their lives. Elephants, eagles and parrots may celebrate their hundredth birthday, but our domesticated beasts are thought to be aged when they have reached a quarter of a hundred. A horse is old at twenty, a donkey at twenty-five and a cat or dog at fifteen. The span of existence allotted to insects is shorter still, the fly and the butterfly commonly enjoying but one summer of vigorous life and then being taken off by the cold if they are not previously anapped up by a bird.
