During Christmas week Mr. J. N. Thompson had seven sheep killed by dogs whose owners are unknown; further Democratic additions are about two months ago Mr. Sharpe, made will be so narrow as to near Alamance Factory, had 27 turkeys killed at one time by dogs problems and on tariff legislation whose owners are unknown; and in Vice-President Marshall's vote the early part of last month Mr. E. to rely upon in case of a tie, the Democrats will have control P. Cook, near Mebane, had two sheep killed by dogs, and he killed of the Senate organization and of two dogs after they had caught general Senate affairs. it is recanother sheep.

It cannot fail to be very exasperating to the owner of domestic animals and fowls to have them thus destroyed. Under such circumstances a man is excusable for warming up-even up to losing his tem-

Under this topic the following from Southern Farming is apropos:

"No one questions the value of sheep. In fact, these animals require so little to eat that very often a few can pick enough around the lot, with what they can get in the pastures, to make a good living. There are very few farms in the South on which a few sheep could not be kept, but this industry never can amount to anything as long as the cur dog industry is given free swing. Many of the state legislatures are now in session, and Southern Farming wishes to urge everyone who thinks more of sheep than of the cur dog to write to his legisator: insist and even demand that he lend every ounce of his energy to to the passage of a state-wide dog tax law. Now we realize that some away, has been arrested. people will not look upon this with favor, but there can be no question but what this would be a good thing for all of our states. It is time for us farmers to wake up and demand at the person who wants to keep a shall pay tax on it. Anyone has a dog worth anything would not hesitate to pey a \$1, to \$2 annual tax. However, this law will do away with a large number of worthless togs waich run all over the country cking eggs; killing sheep, e'c. The

Old Sol Has a Strong Pull at the LIGHTS THAT FAILED.

Capitol In Washington. SWAYS THE MAMMOTH DOME.

Hot Day His Torrid Rays Will Drag the Massive Iron Structure Way Out of Plumb—Turns the Same Trick With Washington Monument. Not many people have any idea as to

Not many people have any idea as to the enormous amount of heat that the sun sends off into space. The earth gets only a very small portion of it.

The bead of a pin placed twenty feet away from an electric light gets in proportion to the light on the surrounding walls of a room about what the earth gets of the sun's light and heat radiated into space. Yet that portion the earth does get is great enough to cause great structures to move.

In fact, all stone or metal buildings are constantly changing their positions

In fact, all stone or metal buildings are constantly changing their positions under the hot rays of the sun. The great dome of the capitol building at Washington is the largest surface of the continuous heat of a bot summer day can best be appreciated, says Harder of the continuous heat of a bot summer day can best be appreciated, says Harder of the continuous heat of a bot summer day can best be appreciated, says Harder of the continuous heat of a bot summer day can best be appreciated, says Harder of the continuous heat of a bot summer day the ladles are round still expectable the summer day the s this mammoth mass really sways back and forth under the scorobing rays unit the top feather in the cap of the statue of Freedom describes an ellipse the diameter of which on a hot day varies from four to eight inches.

The giant plinth base of the down

varies from four to eight inches.

The giant plinth base of the dome. resting on the roof of, the old sandstone building, measures 136 feet on a side. The greatest diameter of the round dome is 125 feet, while the whole iron structure is 248 feet but. whole from structure is 248 feet high from the old capitol's roof to the base of Freedom on the apex. The cast iron

of Freedom on the spex. The cast iron covering this surface is made in thin sheets, offering a good conductor for the heat, which swells even the bolts and beams of the inside before the sun has made its circuit.

The southern side of the dome suffers most from the heat, being exposed longer to the sun, which passes south of the zenith while on its journey from the east to the west. If the metal were exposed to a constant ney from the east to the west. If the metal were exposed to a constant heating the result of the continuation of such expansion as that received on very hot days might prove disastrous, but as it is little if any permanent lojury is done, since the fron returns regularly to its normal position as the cool night comes on.

But what seems more remarkable is the fact that marble is also changed in solume so perceptibly by the sunlight

volume so perceptibly by the sunlight that the mammont shart of the wash ington monument sways back and forth in the sun on a hot day. The outer surface being of hard marble the expansion is much greater than it would be had granite instead of mar ble been used. On a hot summer day the sharp sluminium spex that crowns the obelisk points to a position at least four inches north of normal, but always returns to its proper position in the cool of the night.

the cool of the night.

From the extreme top of the monument inside a long pipe line runs perpendicularly to the bottom, leading to
a small closet behind the elevator.

This contains a long pendulum, whose bob tangs in a vessel of mercury stationary transits with highly magnifying lenses are focussed directly
apon the suspended wire, and through
these each quiver of the monument is
detected, being magnified on a fine
scale graduated to thousandths of an

white shaft was discovered. This plumb bob, of course, was placed in the nonument for the purpose of de tecting any settling it might undergo, and, although the great weight of its mass has pressed the ground for many decades, it has settled only a slight fraction of an inch in one corner.

This seems extraordinars where so short a time before had been the brilliantly lit dipling room filled with servants. Not a trace of it or of them remained."

There are Every morning at 10 o'clock a state

rents on a foundation only 1261/2 feet square and 38 feet deep from a beight almost fifteen times that of the depth The whole rests on the sandy bank of the l'otomac river, with the enormou pressure of five tons to the squar foot. Not only does the sun's hea sway the big obelisk, but at times a stiff winter gale was blowing

The English judge, Parry, in his book "What the Judge Saw" tells this story of a very masterful counsel who was not afraid to put even the beach in its place sometimes. On one occa sion he was arguing a case when the judge asked for his authority for a

Bloom Reigned When Thackersy and Charlotte Bronte Met. . Those do not always shine who

Those do not always shine who should, as many a chagrined lost or hostess has found out. Amusing in retrospect, if quite otherwise at the moment, must have been the occasion when Charlotte Bronte, "the little lady from Yorkshire of whom all Eugland was talking," appeared at the London house of the author of "Vanity Fair." The story is told in Lewis Melville's "The Thackerny Country."

Thackerny gave a dinner party to meet Charlotte Bronte in June, 1850, and among the guests were the Carlyles, the Prootters, the Brookhelds, Mr. Crowe, Miss Eliot and Miss Perry.

"It was a gloomy and silent evening," Jady Ritchie has recorded. "Ev, ery one waited for the brilliant conversation which never began at all.

"Miss Bronte returned to the 304 in the study and murmured a low word

"After Miss Bronte had left I was surprised to see my father opening the front door with his hat on. He put his finger to his lips, walked out into the darkness and shut the door quietly behind him. Overcome by the gloom and constraint, he was running away to his club."

TERROR OF A BOMB.

A Dramatic Incident of the Political

Unrest in Russia,

Here is the story of a Russian anarchist outrage in the words of one
who was nearly killed in the explosion: While staying at Cannes H.
Jones Thaddeus, author of "Reconscitions of a Court Painter," metal the
Grand Duchess Elene of Russia, who gave him an account of the then regave him an account of the then re-cent attempt upon the life of the czar. The czar was a few minutes late in his arrival in the dining room, and for this reason the explosion was prema-ture. After describing the event the grand duchess told Mr. Thaddeus: "When the echoes of the explosion died away a dead silence succeeded, which, united with the darkness pre-vailing, so dense as almost to be felt.

vailing, so dense as almost to be felt conduced to render our helpless post tion still more painful and unendurable. We dared not move. There was no escape from the perli which surrounded us. Presently out of the dark ness came the clear, calm voice of the czar. My children, let us pray! The sound of his voice, while reassuring us as to his safety so far, relieved the

awful strain on our nerves and brough comfort to our hearts. "We sank to our knees, sobbing with candles, first expecting to the
us alive. Some of us were nearly demented when the welcome relief arrived, and our feelings were not calmed
as we then contemplated the awful
unture of the destruction we had es-

source of the term "cop" or "copper," the familiar name for an officer of the law in the mouth of the mischlevous gamin One derives it from the letters C. O. P.—central office police—but the other and more usual explanation of the word is that it referred to the eight point star made of copper and surrounded by a copper ring worn by the Metropolitan police of New York in the late fifties. This badge, a huge affair, which was fastened to the but affair, which was fastened to the but tonhole by a chain about four inche long, was later superseded by a special badge of smaller size.

Feed and the Cow.
The cow, naturally a small producer of butter fat, cannot be made a large producer by any system of feeding, says the Kansas Farmer. The cow has a certain natural ability to produce milk, and this ability cannot be made over by any system of feeding. Many cows do not have a chance to produce the quantity of milk they are capable of giving because of short rations. Before condemning the cow as being unprofitable and worthless as a milker it is advisable always to know that the cow has been given feed in such quantity and of such character as will give her a chance to show that she is caof butter fat, cannot be made a large tity and of such character as will give her a chance to show that she is ca-pable of doing. This remarks points again to the statement we have many times made that, generally speaking, our cows are not as poor as our system of feeding, which me as that by the right feeding methods many cows that are now unprofitable would be profit-able.

Isolate the New Heg.
Good breeders and farmers with experience have the fixed habit of never allowing a newly purchased hog to mingle with the other hogs on their farms until he has been kept in quarantine for several weeks. Every new hog that is bought should be quarantined in a pen widely separated from that which contains the other hogs, and he should be kept there for not less than three weeks, or until there is an absolute certainty that he will not develop any disease or carry it to the other animals of the herd.

Copperas For Hoga,
Copperas (sulphate of Iron) is in con
mon use for destroying worms of hog
and is safe and effective for the pu and is safe and effective for the purpose unless in the case of pregnant sows. It is best not to give copperas to pregnant animals. The dose of copperas is one draw for each hundred pounds of pig, and it is given one a day in slop for five consecutive days it may be repeated in a few weeks if hought necessary. Pregnant sows infested with worms may safely take sulphur in their feed, the dose being from two tenapountuis to a tablespoonful. This may be given in conjunction with sait.—lowa Homestend.

children. Among these are one set of triplets and six sets of twins. Mrs. Wilson is only 41 years of Council of Hickory won the appointment as cadet to Annapolis from the ninth district.

RATES OF POSTAGE.

Parcels weighing four ounces or less are mailable at the rate of one cent for each ounce or fraction of an ounce, regardless of distance. Parcels weighing more than four ounces are mailable at the pound rate, as shown by the following table, and when mailed at this rate any fraction of a pound is considered a full pound.

Shark Oil Is Used.

It is a known fact that so liver oil from the warmer fishing banks is adulterated with oil from the shark and haddocy, and sold in many places for medicinal purposes Unfortunately this fact is not known by small producers who procure in good faith from a jobber who turn purchased it from a dealer, etc. etc., with the ultimate result that the consumer is the real suffer.

consumer is the real suffer.

There is one way, however, to be absolutely sure that this popular medicinal oil is of superior undefiled quality and that is by following physicians example and insisting on the pure, genuine Scott's Emulsion the unkers of which income. the makers of which import their oil direct from the northern cost of Norway in sealed metal containers, and the oil is then tested to insur its purity.

Silage For Beef Production, For years silage has been known obe an economical feed in the production of mest. Not until the past few years, however, has sliage fed beet been recognized as superior to that produced by methods of feeding in which duced by methods of feeding in which silage has not been employed. In the packing centers of this country silage fed beef now commands a premium. This is an added argument for the silo. That little touch of refinement in the preparation of any food commodity which makes theought by the consumer is a thing which the food producer can well afford to give. It requires about so much in cents to produce a can well afford to give. It requires about so much in cents to produce a pound of beef. If in the feeding that pound can be made just a little better than the average pound the added val-ue is an added profit which usually

Ice Water Bad For Dairy Cows. Many a hard worked dairy cow wil takes a draft of icy water from the takes a draft or key water from the tank. And at the next millsting time she will still be chilly and will give sess milk than if her insides had not been frozen up. It pays to give the dairy cows warmed water—that is, with the chill taken off, Winter milk production is not a natural function o the cow, but is strictly an artificial ar rangement by man. If profits are ex-pected the cow must be humbred a lit-ite. A small tank heater will pay big flyidends in a dairy herd.

Effect of Dehorning & Bull. It is a somewhat debatable question whether deborning a bull injures his character so that it will have any eftakes away from him certain traits or at least modifies them to such an ex-tent that his breeding powers are more or less impaired. Others cannot see that deborning has any influence upon the breeding powers of a buil. The operation is in no wise dangerous, espetially if done after the fly season.—Hoard's Delryman.

DO YOU ENJOY EATING

Or Does Everything You Eat Distress You?

Distress You?

Experts declare that the reason stomach disorders are so common in this country is due to hasty and careless habits of sating. Stomach troubles and run-down conditions also usually go together.

John Lind, of Oneonta, N. Y., says: "I have been troubled with a bad stomach trouble for fifteen years, and became so weak that I could hardly walk or do any work. My appetite was very poor, and it seemed impossible to get any rellef. Since taking two bottles of Vino! I find that it has already made a remarkable improvement in my health; my digestion is much stronger, and I have gained in weight."

Vino! makes weak stomachs strong because it strengthens and tones up the weakened, tired and overtaxed nerves of the digestive organs. Vino! is easily assimilated by the weakest stomachs, and is delicious to the taste. Try a bottle of Vino! with the understanding that your money will be returned if it does not helb you.

with the undersigned cash or certified checks for ton per cent. of their bid, and the under-signed will report the same promptly to the Keferse in Bankruptcy for confirmation, and immediately upon confirmation the balance of the bid must be paid and deeds will be

NOTICE!

Notice is hereby given that application will be made to the General Assembly of North Carolina, now in session, for the passess of an Act to confer public powers on hher fia and Constable at Swepconville, in Thomp-son's Township, Alamance county, and to subth subble demakancess there. and Constable at Alamanee Strain, 201°s Township, Alamanee Strain, 201°s Township, Alamanee Strain, 201°s Township Parker, 201°s, 201°s

In a statement furnished to the State enate by Commissioner of Insurance J. R. Young, in compliance with a resolution calling for it, the showing is made that North Carolina has, under the Southeastern Tariff Association, an average insurance rate for fire risks of \$1.12, making this State sixteenth in the matter of the range of rates, 15 States having lower rates. 'Five years ago the rate was \$1.29. North Carolina has, it is asserted, the lowest in the jurisdiction of the Southeast-

Fifty fishermen, more than half of the male population of the village of Little Sturgeon, Wis., were swept out into Lake Michigan Wednesday night when a large ice floe from which they were fishing cracked and floated way from the were fishing cracked and float away from the shore. All we rescued after terrible suffering
