OTHER FELLOW'S MONEY.

Many People Who Live on the Money of Others.

The Wadesboro Ansonian found the following along and passes it along as worth while, which it is. How many people in this commu-munity are living on their own

munity are living on their own money? If the question was put to each person individually he unquestion-ably would answer that he is living on his own funds. But are we really living on our own money? Let's dig down under the suvface and see what we find. For the sake of argument we will assume that you are running an account with the grocer, and the butcher; and possibly other mer-chants.

assume that you are running an account with the grocer, and the butcher, and possibly other mer-chants. You pay, of course, but perhaps, you make settlements only every of or 96 days. Some even only pay their bids twice a year. Now, was it your money that paid the wholesaler for the goods that you are using, and for which you have not paid, or was it the merchants? And if it was the merchant's and you have not paid him, is it your money you are living on until set-tlement day, or is it his? We contend that fully one-hift the people are living from day to day on ot paid, or was it on the people's money, and by doing so, they are, themselves, directly to the present high cost of living. Now, control your rising anger for a moment and we will humbly to show you why you are keeping prices up. The average mercantile stock costs several thousands of dollars, and it must be paid for in cash or the merchant must obtain a line of credit from the wholesaler. And when he buys his goods on credit he pays a higher price for them. In turn you buy you goods from the merchant on credit, and he in self defense must add still another words, he must charge more than cash price in order to protect him-immelf from the ertainty of loss consequent upon slow collections. Thus two "safety" profit, in other words, he must charge more than cash price in order to protect him-immelf from the ertainty of loss consequent upon slow collections. Thus two "safety" profits are added to the original selling prices of the articles. Do you see how it works—how the price is boosted? If every enstomer paid spot cash
