spirit in Alamance County. Earth's Glacial Period.

Geologists base their statements concerning the existence of the glacial period mainly upon evidence in the form of boulder clay and various other forms of deposits. The first scientific references to glacial action were suggested by the Alpine regions and are to be found in the works of Charpen tier and Aggasiz. Man did not exist prior and during the early part of the glacial period. The first evidence of his existence is to be found in the later glacial period.

Ten Pages of a Good Book.

You might read all the books in the British museum and remain an utterly "illiterate" uneducated person; but if you read ten pages of a good book letter by letter, that is to say, with real accuracy, you are for evermore in some measure an educated person. The entire difference between education and non-education (as respects the merely intellectual part of it) consists in this accuracy .-- John Rus

scheme. Other birds, less fortunate in the matter of color, find the power of song a great factor in gaining favor; so these songsters chant their sweetest melodies or chirrup and whistle as best they can.

Even the lumbering alligator knows how to advertise, and, in searching for a bride, does his best to stage a fight so that the lady of his choice may see him come forth the victor!

A square-cut or, as the trade term goes, a "trap-cut" stone is one that is cut to have a flat tablelike top,

SQUARE CUT GEMS POPULAR

That Method is Believed Most Effec-

tually to Set Off the Beauty

of the Stone.

NO. 3

whose edges the average person would describe as having been bevéled off. This cutting is generally used where it is the desire of the lapidary to bring out color as being the greatest element in the beauty of a gem and where the setting is to be flat and low.

Where a high setting is desirable, explains the New York Sun, the cutting of colored stones is most often cabuchon (the half round or oval setting familiar to every one), being the rule for the cutting of the most common semiprecious stones such as lapis-lazuli, carnelian, turquoise matrix and others.

Recently the trap-cut seems more widely used than formerly, since the public has learned, said a Fifth avenue jeweler, to care more for the beauty of a jewel as a whole than for a setting "to show off stones."

Each specimen in the rough tends to be cut in the way that will get the most and the best stone or number of stones out of it. This depends to a considerable extent on the skill of the lapidary.

The Birthday of a Papoose Wesley George Claremore, an Osage papoose, was one year old a few weeks ago, and his parents invited 75 members of the tribe to celebrate the event with them and attend a big feast, for which two deer were killed and served, says an Oklahoma newspaper. In addition there were two beeves, two hogs, a wagonload of turkeys, ducks and chickens, several cases of bananas, oranges, apples and other 'fruits, and continuous stacks of pies and cakes. Toast responses were made by Bacon Rind and Edgar McCarthy, former

chiefs of the tribe, and Roanhorse, a member of the Osage council,
