

AFTER AN OPERATION

Mrs. Wilke Couldn't Get Back Her Strength Until She Took Lydia E. Pinkham's Vegetable Compound

Rochester, Minnesota.—"I had a very serious operation and it seemed as if I could not get my health back after it. I suffered with pain almost constantly. My sister came to help take care of me, and she was taking Lydia E. Pinkham's Vegetable Compound for nervousness and a run-down condition. She had me try some of it, and in a very few days' time I began to feel better. In two weeks I hardly knew myself and after taking a couple of bottles more I was up and helping around, and now I am strong and healthy again and am still taking it. It is a pleasure for me to write this to you, and I hope that many other women who are suffering like I was will find out about your medicine. I will give any information I possibly can."—Mrs. JAMES WILKE, 933 E. Center Street, Rochester, Minn.

Remember, the Vegetable Compound has a record of fifty years of service and thousands of women praise its merit, as does Mrs. Wilke.

Lydia E. Pinkham's Private Text-Book upon "Ailments Peculiar to Women" will be sent you free upon request. Write to the Lydia E. Pinkham Medicine Company, Lynn, Mass.

Sheep Came to U. S. Early
Some of the sheep which roam the ranges today are Mayflower descendants, for Wiltshires of large size and fine wool came to Plymouth, says Nature Magazine. The Dutch brought to New York long-legged sheep with coats of coarse wool, and the Swedish settlers of New Jersey came with rams and ewes to settle in the land.

Heads Nurses in Siam
Miss Wan Piroshaw, a Filipino girl who served her educational apprenticeship in American hospitals and training schools, has been placed in charge of the first public health nursing center which has been opened at Bangkok, Siam.

Back Given Out?

It's hard to do one's work when every day brings morning lameness, throbbing backache and a dull, tired feeling. If you suffer thus, why not find out the cause? Likely it's your kidneys. Headaches, dizziness and bladder irregularities may give further proof that your kidneys need help. Don't risk neglect! Use Doan's Pills. Thousands have been helped by Doan's. They should help you. Ask your neighbor!

A South Carolina Case
J. P. Griffin, chief of police, North St., Belton, S. C., says: "I was troubled with my kidneys and was annoyed with sharp piercing pains through my back. When I bent over, stitches caught me over my hips. My kidneys acted irregularly and the passages of the secretions were often painful. I bought a box of Doan's Pills. Every pain disappeared, and I have had no further trouble."

Early Chicks Are Most Profitable

Practical Suggestions Regarding Successful Feeding and Raising.

(Prepared by the United States Department of Agriculture.)

Early hatched chicks are by far the most profitable, whether grown to maturity for laying or sold as poultry flesh, says the United States Department of Agriculture, and the following suggestions in regard to the successful raising and feeding of young chicks have been found to be practical.

The brooder house and stove heater which are used for caring for the chicks during the first few weeks of their lives must be in working order before the chicks arrive. The most common style of brooding is the use of a stove brooder in a colony house, keeping from 350 to 500 chicks in a flock in each house and placing the houses about 150 feet apart on a good grass range. A house 10 by 14 feet makes a suitable colony house which can be readily moved if built on runners. Chicks brooded early in the season will do better in a large house, about 10 by 20, partitioned so that one side is used for a brooder stove and the other for a cool exercising room. Wire netting should be placed in the corners of the brooder house to prevent the chicks from huddling and crowding in the corners.

Feed Chicks Sparingly.
Chicks should not be fed for the first 36 to 48 hours, after which they should be supplied regularly four or five times daily with easily digested feed which contains little waste material. They should be fed sparingly until about the fifth day, when they can be put on full ration. An excellent feed can be made of Infertile eggs taken from the incubator, boiled for 15 minutes, chopped, and mixed with a dry mash of equal parts of cracker meal, bran and cornmeal, using a sufficient amount of the grain to make a dry, crumbly mixture. Dry rolled oats are excellent for chicks and can be used as one feed; the other two or three feeds being the commercial grains.

At two weeks of age the chicks can be given a dry mash in a hopper, consisting of four parts, by weight, of rolled oats, two parts bran, two parts cornmeal, one part high-grade meat scrap, one part middlings and one-half part dried buttermilk. Commercial chick feed should be fed three times daily in addition to the dry mash. Milk is an excellent feed for chicks and should be provided either as a liquid or in the dry form to secure the best growth.

Feed Coarse Grain.
When the chicks are one month old, they should be fed a coarser or intermediate chick grain, and at about two months of age the scratch feed can be changed to equal parts of wheat and cracked corn, fed two or three times a day.

Work With Pest Poisons Seen in Motion Picture

"Poison," a one-reel education mention picture visualizing the activities of the insecticide and fungicide board, has been recently released by the United States Department of Agriculture. The film shows the numerous ways in which the American farmer, the greatest user of chemicals in the world, employs poisons of various sorts to destroy insect pests and diseases which attack his crops and live stock, and how the insecticide and fungicide board protects the public against fraudulent materials by examining all insecticide and fungicide offered for sale in interstate shipments. Various laboratory scenes illustrate the chemical analyses given the materials, and field scenes show how the worth of the "poison" is determined by actual test.

The seizure of "fake" materials, which not only fail to "cure" but often cause enormous losses by actually injuring plant or animal, and the punishment of their purveyors, are also included in the film, which sounds a warning to users of insecticides and fungicides to beware of untested poisons and to use only tried and proved articles.

"Poison" will be circulated through the educational film service of the department and the co-operating state institutions. Copies may be borrowed for short periods or may be purchased at the laboratory charge.

Farmers Are Beginning to Find Value of Sudan

Farmers are just beginning to realize the value of sudan grass for feed. Sow broadcast or put in with a drill, about twenty pounds to the acre, and don't put it in too deep—about one inch is right. This will make a fine temporary pasture for hogs. It keeps coming up just like alfalfa does, and the more it is eaten down the more it starts up. You can turn in on it about the middle of June and from then on until frost in the fall, it gives a wonderful amount of feed. Put in with a plow and cultivated as corn. It stools more readily and makes good hay for horses and cattle. Use about two or three pounds to the acre. It makes more hay and better hay and is a surer yielder than any other quick crop you can use. It will cut from two to four crops a season.

Sudan grass being an annual and having fibrous roots similar to wheat or oats, is as easily controlled and eradicated as millet. Sudan is a good seed crop, too.

Iowa State College Girls Organize Club

Work Deals With Practical Phases of Farm and Home.

(Prepared by the United States Department of Agriculture.)

A college girls' club has been formed by former members of the farm boys and girls 4-H clubs, now attending Iowa State College of Agriculture and Mechanic Arts. These young women, according to reports to the United States Department of Agriculture assisted in many ways at the recent short course held by the Iowa college for club girls from the counties. A committee of the college club met the young visitors at the railroad station on their arrival for the short course. Another committee showed the girls the interesting places on the campus during their stay. And forty members of the college club served the junior banquet given for short-course students by the college. Members of the organization met once each quarter for dinner together and to make plans for welcoming all new club girls who may come to the college.

4-H clubs are organized and conducted for farm boys and girls, ranging in age from about ten to twenty years, by extension workers. The work of the clubs, dealing with practical phases of farming and home making, is planned to train the mind or head of the boy or girl to think, plan, and reason; to train the hands to be skillful; to attain the best possible health for efficiency and enjoyment; and to train the heart to be kindly and sympathetic toward the work and toward associates; hence the term 4-H, or head, hands, health, and heart clubs.

Discover More Cars and Trucks Owned by Farmer

The United States Department of Agriculture recently discovered that 923 farmers in every 1,371 owned 1,000 automobiles and motor trucks. It was shown furthermore that nine-tenths of these cars were farm business cars. Two-thirds were of the low-priced type and most of them were several years old. About one-fourth of the number were motor trucks, while the fancy roadsters, coupes and sedans composed less than 10 per cent of the total.

A few narrow-minded individuals still are howling that the farmer is doing too much joyriding. That he should lock his car up in the barn and walk and enjoy some real prosperity after a few years, but only a few are howling in that key. Time is just as important to the man on the farm as it is to the man in the shop. He buys a mower because it saves time in cutting hay. His binder is faster than the cradle; and likewise his motorcar is faster than his team and his truck can haul more in less time than he formerly hauled with his horses. It's too bad, of course, that the motorcar can be used for pleasure occasionally. It gives the howlers an opportunity to howl, but let 'em howl. If using a motorcar for pleasure occasionally is a misfortune, we're glad to have it to contend with.

Good Demand for Higher Grades of Beef Cattle

Cattle feeders who finish on grain for market fared very well during the past year, says the United States Department of Agriculture. Prior to the war cattle ranging in weight from 1,200 to 1,350 pounds were about 17 per cent above the price of range cattle. In 1922 cattle of this weight sold about 36 per cent above the price of range cattle. In 1922 good to prime cattle were about 50 per cent above the price of feeder steers, whereas in September, 1923, they ranged to about 70 per cent above. The high industrial activity has given a good market for good beef and has stimulated a demand for the higher grades of cattle which come finished from the feed lots of the corn belt.

Farm Hints

Ice houses are scarce, but the need for them is boundless.

Raising good calves properly is one way to build up a good dairy.

Two slogans for the live stock man: "Feed or get fooled," and "Keep the best; sell the rest."

Get the spray outfit ready and pay particular attention to having the valves work properly.

It would appear that big dealers in farm products have been better sold on the co-operative idea than are many farmers.

Better give the grass a good start before turning out to pasture. Early grass has little strength, and early pasturing kills it.

Sweet clover, five years ago considered a troublesome weed by most farmers, now stands ahead of alfalfa in acreage in Ohio.

"Better late than never," does not apply to spraying for peach leaf curl. Get busy with the spray when the buds first start to swell.

"Hogs like to roll around in the mud," some opponents of sanitation for hogs say. Children would too if parents didn't convert that natural inclination.

Gowns of Black and White; Winsome Millinery for Girls

AFTER all there is nothing that has more distinction than the combination of black and white. It takes an artist to strike just the right balance when these two extremes are brought together, but every season discloses new triumphs in black and white composition. It is in great demand in millinery and every summer sees this crisp and cool substitute for color among the belongings of the smartly dressed.

The handsome afternoon frock shown here is of black crepe de chine with plaited skirt split a little way up at each side and finished with a piping of white crepe de chine. A box

Afternoon Gown of Crepe de Chine.

plait forms a panel at the front of the skirt, which is set on to a slightly bloused bodice at nearly the normal waistline. This is noteworthy in a season that neglects or ignores the waistline. A soft crushed girde of the crepe fastens under a pearl buckle. Pockets in the blouse and others just below them on the skirt are heavily embroidered in white silk. There is a vestee of plaited georgette with a fold of crepe de chine down the center making a background for a row of little pearl buttons. The neck is finished with a frill of the plaited georgette. When the wearer of this stunning frock chose to finish off her toilet with a long strand of pearls she showed the best possible judgment.

Printed silks, showing black figures same color trims it. At the right a hat of taffeta silk, in a pretty poke shape, has a sash of wide moire ribbon, with bow posed at the right side and hanging ends. This model is pretty in any of the approved colors. Millinery patent leather, or silk, will serve for the hat at the center of the group with underbrim facing of tagal braid. Heavy silk is used for the buttonhole stitching on the brim edge and bright red or pure white are effective on hats of black patent leather. There is a collar and bow of ribbon in the color of the stitching and a flower motif applied on the front crown.

Grapes, flowers and foliage trim the milan shape at the lower left. Milans are shown in many colors and

Hats for Subdubs and Flappers.

flowers look well on all of them. There is a band of narrow ribbon on this hat, tied in a little bow at the back. The last hat is a plain legion in a poke shape with square crown. The brim is bound with black grosgrain ribbon and a sash of wider ribbon completes the sort of hat that is sure to meet with approval wherever it is worn.

For once fashion is kind to the subdubs and flappers, who always aspire to look as grown-up as possible.

Will Your Family Be Happy This Spring?

Suppose you have definitely decided to buy a Chevrolet this Spring.

That does not necessarily mean that you are going to get it.

Anyone posted on conditions in the automobile business will tell you that thousands of families are going to be unable to get cars this Spring. That has been true almost every Spring for years, but the shortage in April, May and June, this year, is going to be more serious than ever before.

The only way to be sure

of a Chevrolet this Spring is to order it NOW.

If you do not want to pay for it in full at this time, any Chevrolet dealer will arrange terms to suit your convenience, so you can pay as you ride.

You will be surprised to learn how easy it is to pay for a Chevrolet.

Will Chevrolet Advance Prices?
Ten makes of automobiles have already advanced in price. In spite of increased costs of materials, the Chevrolet price is still the same. How long we cannot guarantee. To make sure of your Chevrolet at present low prices.
