FARMER'S ONLY HOPE IS SMITH VICTORY

Leaders See Emptiness of Republican Promises.

Response in agricultural sections of the country to Senator Robinson's speech accepting the Democratic Vice Presidential nomination has been just as favorable as that following the acceptance speech of Governor Smith. Attention has been directed to the fact that Senator Robinson placed chief emphasis on the farm question, which occupied primary position in

his speech. Senator Robinson's treatment of the agricultural problems follows along the main lines laid down by Governor Smith, recognizing and defining the difficulties of the farmer and then advocating specific and constructive measures of remedy. Both Democratic candidates for

President and Vice President have asserted their championship of the principle of surplus control legislation for which the farmers have been contending in congress for the past five

Farm leaders have been particularly enthusiastic about Governor Smith's statement that the gross injustice of the present tariff system should be corrected, so that the farmer can get the same benefits from protection as industry now enjoys. The Democratic candidate also pledges himself to find the most effective and soundest machinery for bringing this about, stating the essential principle contained in the party platform that costs of handling the surplus shall be assessed back against each unit of the benefited crop brought to market.

Senator Robinson reviews the rec ord of barren failure during eight years of Republican rule to put on the statute books any general laws for the solution of this fundamental problem of the surplus. He examine Herbert Hoover's expressions on agriculture and exposes their emptiness and evasion of the real question.

Particularly gratifying to leaders of farm organizations has been the contrast drawn by Senator Robinson between the "feebleness and fallure" of Mr. Hoover's position and the constructive and positive program adopted by the Democratic party and its

Comment also is directed to the ring of determination in Senator Robinson's speech to find the right solution. He says that the best possible plan must be evolved, improving on all previous methods, but that the cratic party and candidates mean action, feeling that "the time has come when an economic adventure is justified in behalf of the milwithout which civilization could not survive."

Curtis Has Forgotten. but Voters Will Not

The voters of the country who are equainted with Senator Curtis' habit of turning political flipflops and his apparent readiness to take either side on any question, are not going to be very much impressed by his rather weak attacks upon "the Democrats in Washington."

It will be remembered that the sen-ator is the ardent kepublican who, before Hoover was nominated, de-

"If the Republican party chooses Herbert Hoover for its standard bearer, we shall have to apologize to the American people for him until elec-

Offered the nomination for Vice President. Curtis conveniently forgot his previous stand. And he seems now entirely unaware of the inconsistency of his perfervid praise of the man for whom he predicted the necessity of apologizing.

try forget the repudiation of his previous vote to sustain the Presi-dent's veto on the McNary-Haugen

Country Will Rebuke Appeals to Biggery

That Republican leaders are willing to let their disabled craft drift to any port in the political storm they have blundered into is indicated by their failure to repudiate the appeal that is being made to bigotry and religious intolerance in their behalf.

Sepator Robinson has forcefully attacked the hissing "political serpents" in his acceptance speech. All intelin his acceptance speech. All intelligent voters will agree with his statement that a candidate for President "proves himself unworthy if he knowingly accepts advantage from faise-bood, even though not uttered or inspired by himself." An even more spirited attack, upon the sinister "whispering campaign" has been made by Dr. Henry Van Dyke, emiment Protestant cleraymen and wafenent Protestant clergyman and writ-er, who declares it would be a "calam-ity for our country" if Governor Smith were defeated.

Robinson Makes Friends In his speech of acceptance Senator Robinson has revealed the same traits which have characterized him as Democratic leader in the senate. He has shown himself to be a man He has shown himself to be a man of strong convictions but at the same time liberal-minded toward those who do not share his views. When he shows intolerance it is only for fanaticism. That trait has won him the undying enmity of Senator Heflin, and it will also commend him to a maid-tude of voters.—New York World.

Cleaning Up to Increase Yields

Diseases of Wheat and Corn Are Causing Big I osses to Farmers.

(Prepared by the United States Departmen Wheat scab and corn-ear rots are causing large annual losses in the Central states by reducing acre yields and lowering the quality of the corn and wheat crops, according to the United States Department of Agriculture Losses from wheat scab have aver aged about 12,000,000 bushels of wheat annually for the last nine years. Corn-ear rots, some of which are produced

the wheat-scab organism, have caused a loss of approximately 100, 000,000 bushels of corn annually for the last five years.

Cause of Scab and Rots.

The fungous parasites causing wheat scab and most of the corn-ear rots live over winter on dead cornstalks, wheat straw, stubble and other crop refuse. Spores produced by these organisms ripen in the late spring and summer and are blown from the old stalks and straw to the wheat heads and corn ears and cause

wheat scab and corn-car rots. Much of this damage could be prevented by crop rotation, by clean-up of cornstalks, straw and stubble, and by thorough plowing, says the department. Removing or plowing under all crop refuse, if done in the fall, prevents development of the winter spores, and if done in the spring prevents their movement by wind to the wheat and corn plants.

Studies made in 1919, when these diseases were particularly heavy in several different states in the Corn Belt, provide figures showing the effectiveness of such clean-up measures In Iowa, Illinois, Indiana, Ohio, Tennessee and Wisconsin the average amount of wheat scab was 40 per cent where the wheat was sown in cornstalks and only 18 per cent where it was sown in plowed out and wheat

Control of Rots.

The control of the corn-ear rots is just as striking. In 1926 corn was planted on two similar fields, the only difference being in crop rotation and soil preparation. The first field was on clover sod well plowed: the sec ond was on continuous cornland with old stalks poorly plowed under. There was no damage on the first field, while on the second, 45.9 per cent of the ears were affected.

The clean-up program developed for the control of the Europeon corn borer also will control wheat scab and materially reduce the amount of corn-ear rots. These facts should be taken into consideration in advancing the clean-up program in the borer-infested

Well-Drained Soil Will

Make Conditions Right When soil is thoroughly drained the plant roots are able to grow deeper

and secure a large part of their food from the subsoil. A well-drained soil makes conditions right for the growth of the millions of micro-organisms that play an essential part in preparing food for crop plants. When a soil is waterlogged the air is prevented from passing into it where it is needed for the respiration of these or ganisms. Wet soils are too cold for the best growth of plants and prevent the decomposition of organic matter and the formation of humus. This keeps such a soil in a poor physical condition.

Soy Bean in Demand for Great Variety of Uses

The soy bean is now in demand for value as hay and a green manure to eral oils are made from soy beans for cooking and salads; soy bean meal is an excellent stock feed; a health flour is made from the bean; it is used to sprouts are used as green salads, and there are a variety of other uses to which the oriental visitor may be put. The demand for it is growing as manufacturers expand their fields.

*************** Agricultural Notes

The majority of chickens that are marketed are entirely too lean and lanky.

The neighbor with sick hogs is likely to carry infection on his shoes or his clothing to your hog lots if he is permitted to visit them.

Don't crowd the late thin lambs on the market. Send only the fat ones, the others can be made to sell higher by good care and some feed.

Cod liver oil, to prevent leg weakness and promote growth, can be fed to growing chicks in the proportion of one pound to 100 pounds of mash.

According to results obtained at the University of Aiberta, Canada, 50 per cent of the lambs weaned by ewes fed fimothy hay die within four weeks after birth.

The young cockerels should be separated from the pullets by the time they are big enough to fatten, or at the latest by the time they weigh a couple of pounds.

Deep Plowing Best by Special Machines

Kind of Outfit to Use Will Depend on Needs of Soil.

Deep plowing can best be done by machines especially designed for that purpose, according to the agricultural engineering department of the New Jersey State College of Agriculture,

Rutgers university.

The kind of outfit to use will depend on the needs of the soil. In any case, deep plowing involves a heavy exequipment, and is only justified when the cost will be amply repaid.

Deep plowing is usually accom-

plished by means of an ordinary plow, thus bringing the subsoil to the surface. There are occasions when this practice is desirable, but usually it is preferable simply to loosen and stir the subsoil without bringing it to the top. If the plowing depth is increased gradually at the rate of about one-half inch each year, the problem of turning up subsoil will be less seri-

ous. Most plows are designed to de their best work when the plowing depth does not greatly exceed one-half of the width of the plow. For that reason a wide plow should be used for depths beyond eight or nine inches

Deep tillage may involve merely the stirring of the subsoil or mixing the subsoil and topsoil. The subsoil plow runs in the furrow behind the regular plow and loosens the soil to almost any desired depth. Deep tilling machines are complete plows and may be of either the disk or moldboard type. They usually cut in two stages, i. e., the topsoil is first turned, followed by the subsoil. A depth of 20 inches or even 24 inches may be reached.

The traction necessary for pulling deep tillage machines is ordinarily much greater than for common plows. For this reason tractors are very well suited to this type of work.

Wash and Scald Dairy

Utensils After Using Everything that comes in contact

with milk or cream needs washing and scalding after use. Milk contains an abundance of food for bacteria. When remnants of milk are left in the milk utensils they soon sour and pro-duce objectionable odors and flavors. They are breeding places for bacteria and unless removed, quickly and completely, they cause the milk and cream of the next milking to become contaminated and to spoil. No matter how clean and sweet, the fresh milk may be, the cream from it cannot reach the creamery in good condition if handled in unwashed and unclean utensils.

After use, the milk pail, strainer dipper, the separator bowl and all otiner utensils are best first rinsed with cold water to remove the bulk of milk and cream that adheres to them. Thorough rinsing here makes subsequent washing easy. Then they should be washed with hot water that contains some alkali, such as washing powder. Use brush and plenty of "el-bow grease." After washing, they should be rinsed and scalded thoroughly with plenty of boiling water.

Prevent Winter Rodent

Losses During the Fall

Farmers in every state face an annual loss running into thousands of dollars each year through the activities of the more common farm ro-dents—rats and mice. This loss can only be estimated, since it is impossible to get an exact census of the number of each of these small animals existing in each state or to say exactly how much each consumed in a year. The loss is not only in feed consumed, but also in buildings damaged, harness weakened and general depredations of these numerous pests.

Control measures have often been relterated. Just at present, the one big piece of advice is to get at these pests early in the fall, thus clearing the farm before the cribs are filled with corn and before the ground has become frozen. After the cribs are filled, rats and mice have an ideal hiding place to which they can scurry, once the hunt is on. Boards, boxes and all other places under which the rats and mice may hide will soon be frozen down, making it impos for the farmer to exterminate all of the pests.

Pruning Small Fruit Is

Desirable in Summer The question, as far as the desirability of summer pruning is concern has only one answer in the berry patch. It is highly desirable.

their crop of fruit, may be removed from the berry patch as soon as possible after harvest. This serves remove any diseased canes and preallows all the energy of the root sys-tem to go into the production of new cane growth, upon which the follow-ing year's fruit production may be

In the case of black raspberries, the new shoots should be pinched off when they reach a height of about two and a half to three feet. The side shoots may be similarly pinched back, as they reach a length of twelve or fourteen inches.

By following this practice on soil where the canes grow rapidly and vigorously, bushy, productive plants may be expected, and the job will be found well worth while, simply in the greater case of harvesting the following season.

VARIOUS THINGS

Adding the pulp of one-half of a banana to powdered sugar icing make a most tasty frosting

for any cake. When serving whipped cream cut up a few marshmallows, add to the cream and when well mixed set away on ice for an hour or more. You will have the stiffest and best flavored of cream when serving time comes.

A mayonnaise dressing which is different has added to it a spoonful of apple butter.

When serving roast with boiled onions, did you ever take the onion water to make gravy for the roast? If not try it and add a few letters of vitamine to your meal.

Here is a good homemade sunda which will b. enjoyed any day in the week: Put a ball of vanilla ice cream on a slice of canned pineapple. Over it pour a sauce made of canned apricots put through a sieve and sweet ened. Sprinkle with some chopped salted almonds and serve.

Hot Spiced Tongue.—Boll, skin and trim a good sized beef tongue. Rub into it one-half tenspoonful of ginger and one tablespoonful of allspice. Fry a small onion in butter, dredge the tongue with flour and brown in a hot frying pan. When nicely browned place in a casserole, add one table-spoonful of flour to the fat in the pan, add one cupful of stock, the juice of a lemon and one-half-cupful of seeded raisins. Pour this sauce over the tongue. Bake half an hour and serve.

Milanese Tongue.-Rub a clean bee tongue with sait and pepper and boil until done. Skin. Put a layer of cooked macaroni into a baking dish add one cupful of strained tomato juice, one tablespoonful of minced onion, one small green pepper chopped. Lay the tongue on this and cover thickly with buttered bread crumbs. Bake until a rich brown.

Date Nut Pudding.—Cream one-third of a cupful of butter, add one cupful of granulated sugar slowly, then add three eggs well beaten, three tablespoonfuls of flour mixed with one-half tablspoonful of baking powder, one cupful of milk and one ful of walnut meats cut fine. Bake slowly for one hour and serve with whipped cream.

About Bananas

The banana comes to us in a germ proof package sealed by Nature her-self. The thick skin protects the edible portion from bacteria, moids or other contamination. A

worm eaten banana is unknown. pecially free from insect pests.

As a food for children ripe bananas are especially good, because they are nutritious and easily assimilated. The flavor is so delicious that a child will eat them instead of sweets. The fully ripe banana is being used more and more in the dietary of young children.

Among the dietitians who have given careful study to bananas as fond for children are Doctor Pease and Doctor Rose of the New York Post-Graduate Medical school and hospital. The following quotation from the American Journal of Diseases of Children, summarizes in part the conclusions of their experiments:

"The banana is a useful fruit that can with profit enter liberally into the child's dietary, provided it is fully ripe or well cooked. If eaten raw. when fully ripe, the banana makes a most delightful and highly nutritious article of food. Its composition does not warrant the use of the banans as the main component of the child's die-tary, but it can compete with other

in the treatment of chronic intestinal digestion (celiac) Doctor Hass of New York has used bananas extensively. This disease is characterized by the inability to utilize properly carbohydrates and fats. In his treat-ment be has avoided all cabohydrates except those in the extremely ripe banana, and small quantities which occurred in certain milk products

When a small cake is desired to serve with punch the following is one Hermits.-Cream six tablespoonfuls

of butter and two-thirds of a cupful of sugar together, add one be egg, two tablespoonfuls of milk and mix well. Sift one and three-fourths cupfuls of flour with two and one-half teaspoonfuls of baking powder, one-half teaspoonful each of nutmer, clove, nutmer and salt and one tea-spoonful of cinnamon. Add to the first mixture and beat well. Add one cupful of chopped raisins and drop by teaspoonfuls on a greased pan; bake in a hot oven ten to twelve

"I am 19 years old and weigh 105 pounds. Have gained 5 pounds since taking your medicine and am still gaining. My face is round and my arms are getting round. Before, people used to hang their hats on my elbows, thinking they were hatracks. Now I am going to keep on with Milks Emulsion until I weigh 125 pounds.

"You may publish this letter if you wish and anyone that wants to ask me about your medicine may do so. I promise to answer every letter, in fact, I couldn't do enough for Milks Emulsion to repay them for what their medicine has done for me." ROSE-MOND BOWER, Frontenac, Kans. Sold by all druggists under a guarantee to give satisfaction or money refunded. The Milks Emulsion Co., Terre Haute, Ind.—Adv.

Valuable By-Product Cane cream, a new sugar by-product developed by the bureau of chemistry, has proved to be such a popular del cacy in the South that the government is now introducing it to northern cookery experts. A deep brown in color, the new offering is more or less of a medium in flavor between the Canadian maple cream, a thick spread made from maple sugar, and the mo lasses sirup popular for use on pan cakes. Experts say the flavor retains to an unusual degree the taste of the original sugar juice. Molasses is the juice remaining after the making of sugar by crystallization of the cane sap, but cane cream is the whole juice—thick, creamy and sirupy.

Turkey Takes Census

The population of Turkey, according to figures published by the director sus, is 13,660,275 inhabitants. Of this number 1,044,306 live in Turkey in Europe and 12,615,960 in Turkey in
