It produces a trial products. Soybean production will continue to increase as we find better methods and machinery for handling the crop and still more uses for the soybean and its products for industrial purposes.

SEES HEAVY CLAIMS ON FUTURE BANKERS

American Bankers Association Official Declares That Banking Changes Creating Large Bank Social Viewpoints.

Larger scale group or branch banking will inevitably bring a new era of banking organization and operations to the United States and bankers will have to develop "new conceptions, new administrative methods and new eco nomic views," Rudolf S. Hecht, Chairman of the Economic Policy Commission of the American Bankers Associa tion, recently told the members of the American Institute of Banking.

The institute is the educational sec tion of the association and he emphasized the point that the new era in banking demanded "that we must step up our education so that banking shall be fortified for new responsibilities.

What the Future Calls For "We must broaden our social concep tion of banking," Mr. Hecht said. "Not only for the technical operations of the new banking must we fit ourselves, bu both as individuals and an organized profession we must charge ourselves with serious consideration of the so cial problems that are involved. Already we hear murmurings and fears and doubts as to whether the changes that are coming about in banking in the extension of group and branch sys tems do not constitute the looming of a new financial menace, a monopolistic threat not only to the individual unit banker, but to the financial liberty of society in general. I am stating these things merely as facts that must be taken into consideration in our studies. "Public opinion cannot be ignored by any business, least of all by bank

ing, which is admittedly semi-public in character and is, therefore, subject to special supervision by the consti tuted authorities. If banking develop tendencies that give rise to public fears, we must so conduct ourselve as to reassure all doubts.

For this is true,—that business suc ceeds only by serving society-that no business can permanently prosper which does not both render service to the public and at the same time convince the public that it is rendering that service. Banking, therefore, must take cognizance of what the public is saying of this new era in its develop-

"It must be part of the technique of modern banking administration whatever form our enlarged institu tions take, to avoid the creation of monopolies, or even the appearance of such a centralization of financial power as to be able to exercise an un due influence over public or private finance or other lines of business. The public's right to the safeguards of fair competition must be observed.

Must Preserve Individual Initiative "It must also be an item of man agement that individual initiative and opportunity shall be maintained. If America has outstripped other nations in the distribution of the benefits of its progress, it is due to the fact that there are no barriers of social caste or business tradition against advance ment for character, ability, and initiathat it serves itself best by encourage ing by every practical means individ ual ambition and initiative, and hurts itself most by repressing or neglecting them. Competition for efficiency, both within an organization and between organizations, will prevent any institution from long enduring in which maintenance of opportunity and recognition of initiative are not controlling principles of management. As heads of the greatest of our financial and instarted from the humblest of beginecutive authority and reward stand I, personally, see no reason for fearing necessarily supply future bank employees with any less opportunity for achievement than unit banking.

"Again, a major consideration of administration in any multiple form of banking organization must be its public relations in every community it touches. Its foremost consideration must be actually and visibly to serve the economic upbuilding of that community. No system will be long tolerated whose local members work, or are suspected as working, to draw economic strength from one place to enlarge the finanical power of another. The local unit bank has always been part and parcel of the communities where it lives-and no system can last which does not make it a major principle of operating technique to serve, and not exploit, the communities into whose business lives it enters."

Growth of Banking Education

DENVER, Colo.—At the American Institute of Banking convention held here last month the growth in the effort among bank employees to provide themselves with banking education was shown by the fact, as re ported by one speaker, that 12 years ago the institute had 80 study chapters, today 208, and that its enrollment in the study courses had grown from 11,000 to 45,000, or an increase of over 300 per cent. The graduates number nearly 14,000. The institute is the educational section of the American Bankers Association through which bank workers are given instruction in theoretical and practical subjects relating to their business.

COAX BIRDS TO GROVE FOR WEEVIL CONTROL

Something new in the program department of agriculture says.

is possible to induce weevil-eating not having cream to sell. birds to inhabit the pecan grove. The only "Sales talk" necessary to interest the tufted titmouse, the crested flycatcher, the purple martin, and the bluebird in moving to the new community is to provide them attractive homes, rent-free. Community bird baths and drinking fountains are other features that might be added to induce the birds to take up permanent quarters in the grove. Suppression of the natural enemies would also make the grove a more acceptable place in which to live.

The biological survey offers free details about nest construction and protection for these birds to anyone requesting them.
