

HEADACHE?

Why suffer when relief is prompt and harmless!

Millions of people have learned to depend on Bayer Aspirin to relieve a sudden headache. They know it eases the pain so quickly. And that it is so harmless. Genuine Bayer Aspirin never harms the heart. Look for the Bayer Cross stamped on every tablet.

BAYER ASPIRIN

Great Mule Market

Memphis, Tenn., claims the largest mule market in the world as well as the largest mule stable. More than 80,000 mules, valued at an average of \$100 each, are handled there each season. One stable has accommodations for 4,000 mules.

Makes Life Sweeter

Too much to eat—too rich a diet—or too much smoking. Lots of things cause sour stomach, but one thing can correct it quickly. Phillips Milk of Magnesia will alkalize the acid. Take a spoonful of this pleasant preparation, and the system is soon sweetened.

Phillips is always ready to relieve distress from over-eating; to check all acidity; or neutralize nicotine. Remember this for your own comfort; for the sake of those around you. Endorsed by physicians, but they always say Phillips. Don't buy something else and expect the same results!

PHILLIPS Milk of Magnesia

W. N. U., BALTIMORE, NO. 35-1930.

No Short Cut in Making Good Hay

Side-Delivery Rake Will Improve Quality and Reduce Labor.

The worst obstacle to hay making in New York is the weather, but many farmers beat the weather with modern hay making machinery, according to Professor H. B. Hartwig of the New York state college of agriculture. The typical farmer is afraid of green, sappy hay; so he goes to the extreme of cutting his clover too late rather than too early.

Nutritious Hay Cut Early. The most nutritious hay is cut earlier than the full bloom stage and thereby retains the green color and the leaves. The color is needed in hay not because the color itself makes meat, wool, and milk, but because of what is normally associated with color, says Professor Hartwig. The same processes that destroy color in hay are the ones that destroy feeding value. Mold destroys feeding value and color. Wetting in the field and bleaching, with the leaf loss associated with it, also destroy the feeding value along with the color.

Clover leaves make up about 30 percent of the weight of the hay and contain nearly half of the nutrients. Any process that shatters leaves lowers the value of the hay when fed, which explains the tendency to use the left-hand side delivery rake in place of the old type tedder. The left-hand side delivery rake throws a high proportion of the leaves to the inside of the swath where they dry more slowly. It also tends to throw the stems out where the sun can hasten their drying. The right-hand rake will do just as good work but requires a little more labor. With it one should cut the hay in lands, start to rake in the center of the land, and rake in the opposite direction of the mower.

Lessens Labor.

The side-delivery rake does not reduce the time from cutting to storing, but it enables a man to put up more acres with less labor. There is no short-cut for good curing, Professor Hartwig says.

No Difficulty to Find Good Market for Apples

At this season of the year apple growers are generally very much concerned about the proper sale or disposal of their fruit crops. The apple producer who has fine, clean, high quality fruit consisting of standard varieties will have but little, if any, difficulty in finding a profitable market. In fact, such fruit is always in demand and buyers vie with each other to obtain such apples.

There is always, however, a larger quantity of what might be called medium to inferior apples and these are the ones that are the hardest to market. From what has already been said about the apple scab disease and the unfavorable conditions for spraying, the difficulties of the grower in marketing a low grade of fruit may be somewhat worse this year than usual.

No matter what the character of the fruit is, however, it will usually pay to grade it well and to stick to established grades. There is always a market for what is known as cull apples, but the grower may have at least two or even more grades of what is generally termed "culls." For the better culls a higher price may be asked.

Designate Two Cows as Champions of Colorado

Two pure-bred Jersey dairy cows owned by the Colorado Agricultural college have just been declared champion register of merit cows in their classes for Colorado during 1929, by the American Jersey Cattle club.

Certificates to this effect have just been received by Prof. George E. Morton, head of the animal husbandry department at the college, from Lewis W. Morley, secretary of the club.

One of the cows, Campestral Queen, has been designated as the champion register of merit cow, class AA, with a record production of 453.26 pounds of butter fat in 365 days.

The other, Fox's Leora Dewdrop, has been declared the champion register of merit cow, class AAA, for the past year, with a record butter fat production of 394.45 pounds in 284 days.

The college dairy herd is in charge of B. W. Fairbanks, associate professor of animal husbandry.

Farm Hints

Cows milking should be watered at least twice daily at all seasons.

There is some danger of causing udder troubles if helpers are kept overfat, but this condition rarely occurs. Usually they are not carrying sufficient flesh.

If a marked falling off in milk flow is allowed, it is impossible to fully regain the loss, even with the best of feeding later, and a lowered production results from the balance of the lactation period.

All persons who handle milk should realize that they have in their charge a food which is easily contaminated and therefore should take all reasonable precautions to prevent it from becoming a source of danger to themselves and others.

Happiness, Comfort and Sunshine This Home Offers in Abundance

Happiness, comfort and sunshine. This home will bring it in abundance. It is well designed without a bit of waste space. The cost of this home is surprisingly low.

By W. A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these subjects. Address all inquiries to William A. Radford, No. 407 South Dearborn Street, Chicago, Ill., and only inclose two-cent stamp for reply.

In many of the smaller towns and on the farm there is a demand for a small home such as shown in the illustration. On larger farms this would make a very excellent tenant house while for the use of those who live in town it is an excellent design for the small lot or for the family of not more than five people.

The house is 24 feet by 24 feet. Its foundation walls are straight, which means economical construction cost. The plain walls of the square house are broken by an unusual roof design. As a matter of fact, the wide dormer above at the front and at the back

adds to the roominess of the house and takes from it the plainness that is often found in smaller homes of this type. The overhang of the roof and the attractive entrance porch with

Storage Type of Water Heater Best for Home

The ability to turn a faucet at any hour of the day and night and get all the hot water necessary is one of the greatest comforts of present-day American life.

How to get hot water in the spring and summer months when the house heating plant is not in operation is a problem that confronts many homeowners.

Hot water is needed for the family wash, for cleaning and cooking, for shaving, and for a soothing bath. An abundant supply of hot water available at all times shortens the housewife's work in the kitchen by hours in a week, by days in a year, and by years in a lifetime.

The demand today is not merely for a coil in the house heating plant which will supply hot water when the heating plant is in operation, but for a dependable all-the-year-around supply of hot water.

Various types of water heaters are available. Some burn coal, some use oil, but most of them utilize gas as a fuel. A few types of electric water heaters are on the market.

There are three general kinds of gas water heaters.

The cheapest is the "side-arm" type which is so called because the water is heated in a copper coil placed at the side of a galvanized iron tank. While the original purchase price for this type of heater is small, it is relatively inefficient in operation because the uninsulated tank allows the water to cool off very quickly. Furthermore, as the hot water is drawn off, the cold water comes in and cools off the rest of the water and the tank.

Another obvious disadvantage of this type of heater is the fact that it is necessary to light it every time hot water is needed. When the heater is in the basement, this is often a serious inconvenience.

The two other kinds of gas water heaters are the storage heater and the instantaneous heater.

The storage heater is the type most popular with the average housewife. It is economical, yet very convenient. Once this type of heater is installed, the home-owner need no longer worry about his supply of hot water. When the water in the storage tank falls below a certain temperature—

colonial seats on either side and the trellis over which vines or flowers can be trained are features which will appeal to the prospective home builder.

The entrance door leads to a stair hall and at the left is the living room extending most the width of the building. This room is 16 feet by 11 feet 6 inches wide. It is connected

with the dining room, 11 feet 9 inches by 11 feet, by a double cased opening which makes the two rooms practically one. The kitchen is of good size, being 10 feet 9 inches by 7 feet 6 inches. Upstairs there are two large bedrooms, the one at the front of the house being 10 feet 6 inches by 11 feet 6 inches. The one at the rear is 13 feet 3 inches long by 11 feet deep. Both rooms have ample closet space in connection with them. At the head of the stairs off the hall in a convenient place is the bathroom.

This house is set on a concrete foundation and has a basement of the same size as the house itself. It is of frame construction, the outside walls being covered with ship-lap siding. This home building design will appeal to those who want a small attractive home but who do not have a large sum of money to invest.

Foundation of Home Shows Its Condition

Before you buy a house, you should start with the basement and examine the walls for water stains and horizontal water lines caused by water seepage or water standing in the basement.

The foundation and retaining walls should be inspected for proper thickness. A minimum width for main foundation walls below grade for a light frame structure of one or two stories should not be less than 10 inches if of concrete; 13 inches if of brick or 18 inches for stone.

Concrete walls having a sand or clay appearance are deficient in cement, or else are constructed of bank sand and gravel containing a large percentage of loam. Such walls should be examined for sand and loam pockets which are detrimental to the walls' structural strength and permit the entrance of water.

The wall plate or mud sill, which lies directly upon the foundations and upon which the floor rests, should be minutely examined for dry rot and decay. This is generally the first member of a dwelling's superstructure that goes bad.

THE KITCHEN CABINET

(© 1929, Western Newspaper Union.)

Not all tomorrows can be sad Let's put by our foolish fears And through all the coming years Just be glad. —James Whitcomb Riley.

FRUIT DISHES

Since science has brought to our kitchens the prepared pectin, which is so easy to use and saves the long cooking and waste in bulk as well as flavor, many of the fruits such as peaches, pears and berries may now be found on our fruit closet shelves to be enjoyed when such fruits are out of season or too expensive to be bought.

Ripe Pear Jam.—Use only fully ripened fruit. Peel, core and crush so that every part is reduced to a pulp. Measure four cups of the fruit (two pounds) and seven and one-half cups of sugar to one bottle of pectin. Mix the fruit and sugar and bring to a hard boil for one minute. Remove from the fire and add the pectin, stir and skim by turns for five minutes to cool slightly to prevent the floating of the jam. Pour quickly and cover with a film of paraffin. This makes about eleven jelly glasses. It sometimes sets slowly. For variety one may add grated lemon rind or spices.

Ripe Peach Jam.—Use only fully ripened fruit, do not peel, remove the pits and crush the fruit. Add one-half cupful of water, two or three cups of fruit pulp, six and one-half cups of sugar and a bottle of pectin. Cook the sugar and fruit to a full boil for a half minute. Remove from the fire and let stand one minute, skim, return and simmer five minutes; bring again to a boil and add the pectin. Remove from the fire, let stand again a minute, skim and pour into glasses.

For the jelly, cook the fruit, drain through jelly bag and to three cups of the juice add two and three-fourths pounds of sugar and one cupful of pectin. Prepare as for pear jam.

Dixie Fruit Cup.—Take one can of grapefruit, one cupful of watermelon balls or cubes and a few sprigs of mint. Chill the grapefruit in the can before opening. Pour the grapefruit over the melon and let stand to blend the flavors. Serve in fruit glasses with a sprig of mint.

Peach Melba.—Take three large peaches, peel and halve them. Line sherbet glasses with strips of sponge cake and place a halved peach in each dish with the cut side up. Fill the cavity left with a small ball of vanilla ice cream, cover with heavy cream, one-half cupful to which one-fourth of a cupful of cranberry sauce and a bit of shredded coconut has been added.

Another Fruit Cup.—Prepare one medium sized grapefruit or use one-half a can, cube two pears, quarter one-fourth of a pound of dates and cut into cubes one-half a cantaloupe. Blend well, adding the dates at the last. Serve very cold.

ANOTHER SANDWICH

Ever since the nobleman John Montagu, fourth earl of Sandwich, called for the double slice of bread with a filling of meat or cheese, the sandwich has been a most popular "quick lunch."

Pures of Sardine Sandwich.—Drain the oil from a large can of sardines. Remove the skins and bones, rub the fish through a fine sieve and to it add one-fourth of a cupful of creamed butter, two finely chopped hard cooked eggs, salt, pepper and Worcestershire sauce to season. Mix thoroughly and spread on sandwich bread that has been spread with mayonnaise. Put together with pairs of the bread spread with the mayonnaise. Cut the sandwiches into three strips, making finger-sized sandwiches, easy to eat and handle.

Melba Sandwich.—Chop the meat peeled from the pits of three dozen large olives. Add one cupful of finely chopped pecan nut meats, moisten with mayonnaise and spread on thinly sliced graham bread that has been spread with green pepper butter.

Green Pepper Butter.—Cut a slice from the stem ends of three or four green peppers, remove the seeds and white fiber and cook until scalded in boiling water. Drain again and rub through a sieve—there should be two tablespoonsful of the pulp. Cream one-half cupful of butter and add the pulp gradually, stirring well. Season with salt and cayenne. This butter is especially good spread over planked fish or steaks.

Bacon and Eggs Sandwiches.—Spread thin slices of bread with salad dressing to which has been added finely chopped cooked eggs. Cover with thin slices of hot broiled bacon and another slice of bread spread with salad dressing.

Ham Sandwiches.—This seems to be the favorite of all meats for sandwich filling. Chop the ham fine with a little of the fat mixed with it. To one cupful packed solidly add prepared mustard, cayenne. Spread on thin slices of buttered dry bread which has been covered with a thin layer of horseradish.

Mementoes of American Generosity Still Stand

The Messina earthquake of 1908, in which 90,000 people lost their lives, is probably a hazy memory to those Americans who donated shiploads of food, clothing and medicine, as well as large sums of money.

It may therefore be interesting news to them that their philanthropy lives on after two decades. A new Messina has grown up on the ruins of the old.

There are numerous costly public and private buildings, fine apartment houses and private residences in the new Messina, Sicily's third largest city and a thriving port and railroad center. One whole quarter, however, of Messina is still made up exclusively of wooden houses donated by Americans for temporary shelter.

Train Night-Flying Birds

A race of night-flying pigeons is being developed under supervision of the War department. Soon after the World War the United States army signal corps started to develop these birds, realizing that they would be of invaluable service in case of war or in time of great national disaster, such as floods, cyclones or earthquakes. At the army signal school at Fort Monmouth, N. J., there is now a loft containing only night-flying birds. These are the result of careful training of homing pigeons, selection and breeding of the most intelligent, the sturdiest and those that had habitually flown in twilight or darkness.

Pictures for Public

While the French government is endeavoring to arouse interest in the natural features and beauties of the country by printing views of the more interesting sights, the tramway companies are trying to improve the mental equipment of their passengers by printing the portraits of celebrated characters of French history upon the tickets which are issued to riders. The faces of Turgot, Lamartine, Michelet and Victor Hugo are among those appearing upon the tickets, and it is supposed that the passenger will be spurred on to improving his mental equipment by contemplating the portraits.

Queen's Refuge for Sale

The estate of Gadgrith, near Ayr, where Mary Queen of Scots is said to have sought refuge for a night, when fleeing from the battle of Langside, is being offered for sale. It is one of Scotland's oldest historic properties. For centuries the estate of Gadgrith was the home of the Chalmers, the great chamberlains of Scotland, from whom the famous divine, Doctor Chalmers, is said to have claimed descent. John Knox, who was a close friend of the family, dispensed the sacrament there.

Mirrors on Golf Club

Sir James Henderson, British scientist, faced with the usual troubles of the golfer, invented a club whose head contained two mirrors, and the device has proved so successful that it is being placed on the market in England, says Popular Mechanics Magazine. When the head is placed against the ball the mirrors reflect the light from a lamp set beside the ball. Unless the club is in correct position the light is not reflected from both mirrors.

To Disperse Mobs With Water

Berlin's police department has been equipped with a number of anti-riot automobiles to dispel unruly crowds. The car is an armored water tank on wheels capable of shooting water at tremendous pressure. Each car has a capacity of 56 gallons and the turret, resembling that on war tanks, is so arranged that water can be thrown in any direction.

Simple Matter

"Does a dentist have much trouble in collecting his bills?" "No," answered the expert in teeth. "A man usually sees that his last account is paid before he has more work done. He takes no chances on an unfriendly disposition."

Different Matter

Husband—And what did you pay for that hat? Wife—Nothing. Husband—Well, that is cheap! How did you manage it? Wife—I told the milliner to send you the bill.—Dorfbardier (Berlin).

Frank

"To what do you attribute your success in the financial world?" asked the cub reporter of the great capitalist. "To the fact the world is full of easy marks and suckers," he snapped.

Odd Civil War Currency

During the Civil War unused stamps inclosed in metal disks were used for money.

Prevent Summer Upsets

Warm weather and changes of food and water bring frequent summer upsets unless healthy elimination is assured. You will find Feen-a-mint effective in milder doses and especially convenient and pleasant for summertime use.

Feen-a-mint FOR CONSTIPATION

INSIST ON THE GENUINE

Stenographer

A pair silk hose for 1 hour work on your typewriter. Nothing to buy or sell. Write today for instructions to Sidway Publications, 1223 1/2 E. Main, Knoxville, Tenn.

Dr. Peery's Vermifuge

A single dose of Dr. Peery's "Dead Shot" expels worms. Tones up the stomach and bowels. No after purgative necessary. All druggists, 6c.
