Family Allowances for Enlisted Men Explained

A Brief Outline of Soldiers' Benefits Spring Must Be Just Around the Corner Under Public Law 625-77th Congress

What is a family allowance?

A government check sent to the soldier's dependents regularly every month. The family allowance is made up of money set aside from his pay and money contributed by the government. It is granted only upon application. It is payable only to dependents eligible under the law. These include, primarily, wife and child (Class A relatives); dependent parents and minor dependent sisters and brothers (Class B dependents).

How much is set aside from the soldier's pay?

Twenty-two dollars a month, if the allowance is for Class A relatives only, or class B dependents only; \$27 a month, if it is for both Class A and Class B.

How much will the soldier's dependents get?

Wife	and	2 children	72
Wife	and	mother only parents	47 80
		parento	00

How soon does a family allowance begin to be paid?

The allowance begins to accrue the month after he applies and is payable when that month has ended. For instance, if he month has ended. instance, if he applies in March, the allowance begins to accrue in April and is payable in May.

Who may apply?

The soldier may apply as soon as he is on active duty. All enlisted men in the fourth, fifth, sixth or seventh grades may apply. Depend-ents may apply, too, but it is better for the soldier himself to do it. His wife or child (also a divorced wife to whom alimony is payable) may receive this benefit with or without his consent. But class B dependents may receive it only if the soldier

How is application made?

Application is made only on the official form WD, AGO 625. These forms are available at reception centers, recruiting stations, local chapters of the American Red Cross, service command headquarters, and the office of dependency benefits.

Is documentary proof of relationship and dependency required? Yes, and soldiers or relatives should gather that proof before submitting applications and attach it to application. Documentary evidence consists of certified copies of the public or church record of marriage and of the birth of the soldier's children: two affidavits of dependency, sworn to by disinterested persons. for each Class B dependent named in application.

Evidence must accompany any application filed by a relative or dependent of the soldier.

All army men may authorize a CLASS E ALLOTMENT FROM THEIR PAY

For their dependents. For a civilian life-insurance premium.

To a bank, for a savings or a checking account in the soldier's name or in the name of a dependent.

What is a Class E Allotment?

The Class E allotment is a voluntary allotment authorized by a man in the army, by WAACs, by army nurses and by certain civilian employees of the war department on duty outside the United States. The allotment is taken from the allotter's pay each month and sent to his de-

Minute Make-Ups

pendents in the form of a govern-ment check. It may be in any amount the allotter wishes to authorize, provided (if he is an en-listed man) he leaves himself not less than \$10 a month. An officer may allot his entire pay and allowances.

Who mails the checks?

The Office of Dependency Benefits, 213 Washington street, Newark, N. J., administers Class E allotments as well as other soldier's benefits, and issues all checks.

How soon will an allotment be paid? An allotment is payable at the end of the month for which it is made. Check may be mailed during the following month. An allotment authorized to begin in January is payable in February.

Can a soldier authorize an allotment and also apply for a family allowance? Yes, if in the fourth, fifth, sixth, or seventh grades of the army.

Can he increase, decrease of

A soldier may do so at any time on the official form provided for this purpose.

What is the difference between an allotment and a family allowance? An allotment is a sum deducted entirely from the serviceman's own pay. A family allowance consists of a sum deducted from his pay, plus a sum contributed by the government, and is payable only to certain relatives or dependents.

Heavily clothed as a defense against the fickle March winds, Dick Wakefield, Harold White, Harold Manders, Tommy Bridges, Manager Steve O'Neill, and Albert Unser, of the Detroit Tigers, are shown (left to right) running around the park before going in after the first day's workout in spring training camp at Evansville, Ind.

More Pork Through Disease Control

CHICAGO .- Two steps by which | lives of baby pigs:

farmers this spring can achieve greatest results in increasing pork production for the nation's war needs, were outlined here recently in a report issued by the commit tee on swine diseases of the American Veterinary Medical association. The two steps are: prevention of baby pig mortality, and reduction of swine disease losses.

Nearly one third of each spring's pig crop dies during the first few weeks or months, the committee's report declares. If more of these pigs could be saved, it could mean a large increase in our food production. Here are some of the specific steps recommended by the American Veterinary Medical association committee, to help save the

erate.

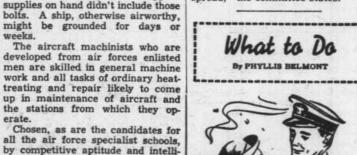

"Provide a balanced diet for the sows, so they can nourish healthy, vigorous pigs, both before and after farrowing; make sure that houses are warm, dry, well-ventilat-ed, and free from drafts; keep the sow and her litter away from old hog lots where the young pigs can pick up parasites or infections; pro-vide sufficient floor space for each litter to prevent overlying; if illness appears, call a veterinarian promptinstead of waiting until a number of pigs have been lost."

Swine disease control is more imperative this spring because of the larger number of hogs per farm and the greater possibilities of dis-ease spreading, the report indi-cates. Some of the suggestions for disease control offered by the report include:

"If feeder pigs are purchased at public auctions or sale rings where they have been in contact with other animals, isolate them from the home drove for two or three weeks, to permit latent diseases to mani-fest, themselves. Hog cholera will again be the greatest swine destroyer this year, and all pigs should be vaccinated around weaning time. In erysipelas areas, pigs should be vac-cinated against this disease, also. Rigid sanitary measures should be practiced for the control of enteritis. Balanced diet for sows will help prevent pig scour. Breeding stock should be selected carefully to avoid infectious abortion. Nutritional anemia of suckling pigs can be avoided by making a preparation of iron and copper available to them. Sanitation can be one of the greatest factors of all in prevention of swine diseases."

The report declares that tens of thousands of hogs are lost because their owners are not sufficiently alert to detect disease symptoms when they appear, and then delay too long in taking steps to check the spread of the disease when they do recognize it. "Prompt diagnosis of

the exact cause of the illness is half the battle in preventing disease losses, and the other half depends on immediate measures to check the disease and prevent its spread," the committee states

U. S. PRODUCTION IS BASIS OF WEALTH

PRODUCTION is the foundation upon which is built our ever-increas-ing national wealth, consisting of everything upon which a monetary value can be placed. Dividends from our national wealth, including wages, constitute our ever-increas-ing annual incomes. In the early years of our Republic, that annual income represented less than \$150 per capita. Today it is better than \$700 per capita. Year after year, decade after decade, it has been more equitably divided. It is the increase in our annual income that **PRODUCTION** is the foundation increase in our annual income that has raised the standard of living for all of us in America. It has made possible better homes, automobiles, radios, washing machines, teleradios, washing machines, tele-phones, and all those things which make living for us easier than it was for our parents and grandpar-

It is machinepower of the present as against manpower of past gen-erations that has made increased production possible, and at the same time, reduced the hours of labor and the cost of production. With a tractor attached to a gang plow, the farmer tills more acres and in fewer hours than did his father with a team attached to a single plow share turning one furrow at a time. The same thing is true in manufacturing plants. Power - driven machinery makes possible the mass production of automobiles. It reduces the cost of cars to a point where all can own them. It reduces the hours of labor and the sweat of manpower days.

Production creates a demand for production to satisfy, and satisfying creates new jobs, which, in turn, create new demands.

To place a limit on production in any line is but to stop progress, to break down the foundation upon which our well-being is built. Our need is not less production, but in-creased facilities and speed in distribution. That is the problem facing not only the economists and statesmen of America, but those of the entire world. It is a problem which can be solved when applied to a world scale. It cannot be done by uttering idealistic phrases or by merely wishful thinking. It calls for the application of the nation's and the world's best brains, and it calls now.

AMERICANS DO NOT LIKE TO BE PUSHED ABOUND

WAY BACK 150 years and more ago, England's German king, George III, tried to tell the American people what to do and when to do it, without telling them why and without saying "please."

At Boston they slapped that Ger-man king of England in the face and after a few years of armed con-troversy, they kicked him in the pants at Yorktown, and sent him home. That was America's first experience with a bureaucrat.

Since then the American people have selected leaders whom they expect will lead and not drive. They expect leaders to tell them the 'what," "when" and "why" of doing things, with an accompanying "please." They have never been willing to be pushed around, but have been willing and anxious to be Whenever their leaders have attempted to become pushers, the American people have demonstrated a habit of dispensing with the serv-ices of those pushers, as they did with George III. They do not take kindly to bureaucratic methods or government by decree.

loon. Great box kites carrying instruments for recording conditions in the upper air were sent up from one to three miles high.

Every school boy and girl who flies a kite knows how Benjamin Franklin with his famous kite and key drew electricity from a storm cloud. But when March comes they won't be thinking of this great scientist or of kites as military instruments, but just as something with which to have great fun.

But lest their kites prove dangerous fun, these safety rules should be followed:

1. Do not fly a kite near light, telephone or trolley wires, or near high voltage transmission towers. 2. Do not use wire or tinsel twine of any sort. Use only cotton string. Wet string is also a conductor of electricity and will cause as much damage as wire if brought into contact with electric wires. 3. Do not use a kite with metal

ribs

4. Do not run across public high-ways while flying a kite. 5. Always fly a kite in open, unobstructed places away from traffic, poles, and power lines.

gence tests, the embryo machin-ist is plunged immediately into days of basic training in metal working, a training he shares with sheet metal and welding trainees. He learns the channels through

which aircraft service orders come, and how to find his way about in parts catalogues and systems of reference for repair and service of parts. He learns to identify various metals and to recognize their properties and composition of alloys by the painted color bands which are a code for the various alloys at army supply bases. He learns to read and interpret blueprints, and is giv-en elementary training in mechanical drawing. He learns the uses of all the fundamental hand tools essential to this branch.

Then he is ready to take up the tools themselves. Emphasis throughout is on tools-how to make them, how to handle them and care for them. Woe be unto the man who handles them carelessly, for this to an army machinist is the unforgiveable sin. From the simplest wrench or file to the most complicated turret lathe, tools are his business-the tools that "Keep 'Em Flying." Released by Western Newspaper Union.

If you are planning to marry a man in the service and your weddi is going to be a "hurry up" fur-lough affair, please spare him too large and pompous a wedding party. Most girls picture as romantic the dea of a military wedding and an archway of crossed swords-and it is. But the man in the case would like a quiet affair with just a few intimate friends present without the fuss and excitement.

Your wedding can be as lovely, though it is small, and you can look just as alluring in a street length dress as you would in a flowing gown and veil.

You won't be nearly as tired out when it's over with as if you had planned and executed a large affair with all the attendant entertaining and arranging.

DOWNS 72 JAP PLANES

Destruction of 72 Japanese planes in aerial combat by a single United States army air force fighter squadron based in New Guinea between June 1, 1942, when it moved into that area, and January 8, 1943, shortly after the fall of Buna Mission, has been disclosed by the war department. Five of the squadron members credited with downing the Japs are pictured here.

LOCAL OFFICIALS KNOW THE REGULATIONS

RECENTLY I listened to the head of a state rationing organization at-tempt to explain what rationing is all about and how it is done. After a brief statement as to the necessity of rationing, he offered to answer any questions members of the audi-ence might ask. The questions poured in to the speaker. They were normal inquiries, the kind for which any head of a household, anxious and willing to obey the regulations, would like an answer. The speaker could not answer one in a dozen of those questions. He had either not read the voluminous and often con-tradictory instructions, or had not interpreted them. A member of the town rationing board came to the rescue and did a satisfactory job of imparting detailed information which fully satisfied those who asked the questions. All of the ability and wisdom is not centered in high places. The federal official was drawing a handsome salary. The local man received nothing for his work, but he was a consciention American.
