A. T. NEAL

DO YOU WANT A HOUSE?
If so you will do well to write,
or see J. Levister, at Henderson
N. C., before contracting. Plans,
specifications and estimates made
on burnt buildings, &c.
1-12-95.

FANCY CHEESES.

Some of the Choice Varieties and How They Are Made.

Among the cheeses with which the epicure rounds off his dinner the chief favorites are the Stilton, Edam, Camembert, Munster, Roquefort, de Brie, Limburger, d'Isigny, Neufchatel, Schloss and Gorgonzola. Of these delectable specialties all except the Roquefort are the production of the American dairy.

With complacency the diner out regards his plate of fromage, flatteringly himself that something inexplorable in the air or soil of the continent has surcharged the cheese before him with peculiar richness. This, he supposes, was made in Switzerland from the milk of the goat, and that ripened into tooth-someness under a warm Italian sky. The truth is that even the Limburger has most likely traveled no further to reach his hotel, cottage or mansion than from the town of Antwerp in the state of New York.

In this favored region, where the grass is crisp and rich and fine heads of Jersey cattle dot the landscape, it is to be found one of the largest cheese factories in this country.

It is true the manager has served an apprenticeship in the factories of the old world, and the success of the production here rests upon the quality of the milk and the method of its manipulation.

The process by which each variety is made is essentially the same as those of every other. The difference consists in the extra amount of cream incorporated with the milk, in the amount of time occupied in the curdling and other details, such as the pressure under which the curd is placed.

In all cases the milk is more or less heated, rennet is introduced to coagulate, the curd is carefully cut into dice, drained of its whey through linen or cotton cloths, salted, pressed, arranged on shelves, kept at a given temperature, turned, rubbed and "cured" for a certain length of time.

Take, for instance, fromage de Brie. After the curd has stood four hours it is dipped into tin rings, which are placed on small cane mats, from which the whey drains until it has shrunk to fit a smaller ring. In two months of turning and rubbing the de Brie is fit for the market. Much in the same manner are made the d'Isigny and the Camembert. For the latter cream is added to the fresh milk to make it richer, and the process of curing goes on more slowly.

In the case of the cheeses named the milk is kept at about 60 degrees. In the Munster, Limburger and some others milk and rennet are heated in huge copper kettles to 85 degrees, after which the curd is cut into cubes and heated to 110 degrees for one and 1/2 for the other.

Italian cream cheese, or Philadelphia cream, is made from sweet cream instead of milk. Neufchatel is made from unheated milk, and the curd is subjected to little pressure. It is then cut out fine by a machine, salted and packed, also by machinery. But little of the Neufchatel is imported, and that in winter.

Clubhouse cheese, which is sold in small glass jars, is simply cream cheese run through a sausage grinder and stuffer, with the addition of a small quantity of butter. The profit on this kind of cheese is immense.

Roquefort cheese it is impossible to make outside of the place from which it is derived its name. Cheeses are there cured in a cave having a peculiarly soft, dry air, which gives them a quality that can be obtained by no other method.

From the whey, buttermilk and skimmed-milk of cheese factories is obtained that sugar of milk so much used in the manufacture of medicinal tablets.—New York Home Journal.

ANIMAL VISION.

Only One Bird Whose Sight Is Better Than That of Man.

Birds are commonly credited with an extraordinary range of vision. Circumstances lend aid to the development of the mental factors in their case. The usual distance at which terrestrial species use their eyes is limited by the ground horizon, but in the case of the soaring birds, such as vultures and eagles, the horizon, the natural limit of sight, is enormously extended. Macgillivray early noted that, though birds of prey have orbits of great size—the eyeball of the common buzzard being 1-1/3 inches in diameter—they do not, as a rule, soar when seeking their prey. The eagle when hunting flies low, just as do the sparrowhawk and the hen harrier.

Yet the vultures and condors, birds which admittedly do soar when seeking food, have been proved to find carrion by sight. A carcass was covered with canvas and some oil placed upon it. The vulture, saw this, descended and ate it and then sat on the covered portion within a few inches of a putrid carcass. When a hole was made in the covering, they saw and attacked the food below. But the rapid congregation of vultures from a distance to a carcass is probably due to their watching their neighbors, each of which is surveying a limited area. Charles Darwin pointed out that in a level country the height of sky commonly noticed by a mounted man is not more than 15 degrees above the horizon, and a vulture on the wing at the height of between 3,000 feet and 4,000 feet would probably be two miles distant and invisible. Those which descend rapidly and appear to have come from beyond the range of human sight were perhaps hovering vertically over the hunter when he killed his game.

There remains one undoubted instance in which bird vision is far keener than that of man. The great gray shrike, *Lanius excubitor*, is habitually used by the men who catch falcons at Vallensward to give notice of the approach of a hawk. The bird sees it far sooner than the men, and at once gives notice of its approach. This is a single instance in which the specialized acuteness of sight may be due to the fact that the bird in question much resembles in color the pigeons which are the falcon's favorite food. But long sight does not seem common property of bird vision. The gametids, which catch fish at sea, descend from a considerable height, but they kill their prey on the surface of the water or near it. Nocturnal birds and animals, though able to see with little light, have no enhanced powers when the light is more powerful, and those animals which, like deer, feed by night or day indifferently have only developed a keenness of vision from constant fear and vigilance. Horses and cattle, which have the same power of sight by night, have never increased their visual range. Dogs habitually rely on another sense, that of scent, in preference to their eyes and will walk over a dead bird while their brain is intent on discovering its place by scent alone. Weasels when hunting will run up to a human being who imitates the squeak of a rabbit and peer up at him to discover where the sound comes from. The smallness of the eye limits its powers. Just as the best telescope has usually the largest object glass, so the largest eye will probably be the best organ of sight, and in the absence of any extraordinary developments in the size of the organ itself in animals their power of vision must, in the absence of evidence to the contrary, be supposed to be proportionately limited.—London Spectator.

A SUBSTITUTE FOR RICE THROWING.

Confetti Used at an English Wedding in Place of the Grain.

Most of us who have had anything to do with weddings have had experiences of the direful effects of the showers of rice which mark the departure of the bride and bridegroom. There are few young couples who have not entered upon their honeymoon in actual physical pain, thanks to the stony grains which have stung their eyes and ears and have found their way into their clothes and down their necks. Worse disasters even than this have followed the use of rice as a sign of the good will of their friends, and serious accidents have not infrequently occurred in consequence of the reckless showering of these grains. The horses have been scared, and this in some cases has led to the overturning of the carriage and the severe injury of its occupants. Attempts have occasionally been made to mend this state of affairs, but until lately nothing has taken the place of rice. Rose petals and small flowers have been tried, but they have many disadvantages, notably that of becoming crushed to pulp and leaving unsightly stains on the carpets of the house. Shreds of colored paper have occasionally been used, but in these there is something too suggestive of the school-boy's "hara and hounds" to excite much interest.

At a recent fashionable double wedding at the West-End considerable admiration was caused among the guests by the distribution of confetti as a substitute for the offending rice. They were such as are used at Eastbourne and the Riviera for the battles of flowers and on similar occasions. For the benefit of such readers as are unacquainted with confetti I may describe them as tiny paper wafers principally gold and silver, with a few colored ones intermixed by way of adding to the effect. The progress of each bride down the staircase to the carriage on this particular occasion was made in a shower of gold and silver—surely quite as good an omen for her future prosperity as could possibly be afforded by the prosaic grains of rice. The effect of the myriads of sparkling confetti was absolutely charming and fairylike as they fluttered to the ground, the sun catching them as they fell. Certainly they clung about the dresses of the newly married couples, but they did no harm and were soon shaken off. In the house as they fell on the floral decorations and sparked among the roses and ferns they produced a result that is well worthy of note by those whose business it is to provide novelties for functions of this sort. As for the horses, they were sublimely unconscious of the tiny gold and silver pieces with which their backs had been sprinkled by the time they started.

It is not surprising to hear that the introduction of these confetti at the Eastbourne fetes has caused their manufacture to be measured literally by the ton, and when once they are brought into use at weddings tens of tons will be mentioned in connection with them, and many a happy pair, when they begin their new life, will no longer have occasion to exclaim, "Save us from our friends!"—London Queen.

The Mahsuds of India.

They are a lean, wiry, keen visaged people, with a peculiarly wolfish, hunted expression, due probably to poor feeding and the sharpness of the struggle for existence, from which no section of the tribe is exempt. The Mahsud is a veritable Ishmaelite. His hand is against every man, and every man's hand is against him. Though collectively thieves and robbers by hereditary calling, with the Gurnal pass just south of them as a happy hunting ground throughout the winter, they have some virtues which civilized man frequently wants.

They are individually brave and fearless of death, and they are very particular about the honor of their women. A faithless wife has her nose cut off, and sometimes her lips slit as well. The adulterer, if he can be caught, is either killed or has a foot or leg lopped off. Our officers, by the way, in the late expedition were struck by the number of maimed men they saw in Mahsudland. On inquiry they found that the legless ones were only local Don Juans, who had been tried and convicted for loving "not wisely, but too well."—Blackwood's Magazine.

Big Gun.

The largest cannon in the world was taken by the English when India was conquered. The cannon was cast about the year 1500 and was the work of a chief named Chuleby Koomy Khan of Ahmednagar. The inside of the big gun was fitted out with seats and is a favorite place for English officers to go for a quiet sleep.

Overplayed It.

Mrs. Ford—John, you were drinking last night. I noticed it in your conversation.

Mr. Ford—In my conversation?

"Yes, you were so painfully correct in your pronunciation."—Cincinnati Tribune.

SCHOOL FOR GIRLS.

Misses Edith and Fannie Yarborough, Principals.

The next session will begin on Thursday the 5th of September under the same management.

NOTICE.

By virtue of power vested in me under an order of sale of the Superior Court of Franklin county, I will on Tuesday the 22nd day of October 1895, at the Court House door in Louisburg at public auction, to the highest bidder, sell for cash, one half undivided interest in a certain tract or parcel of land, situated in Franklin county, State of North Carolina, adjoining the lands of R. H. Strickland, Willis Joyner and others, containing two hundred and ten acres more or less, it being the piece of land known as the "theland"; said tract of land will be surveyed and division made before the day of this sale.

W. N. FULLER, Administrator of MARTHA E. H. MURPHY.

The above tract of land described is known as the Murphy tract.

CEEDAR ROCK ACADEMY

BUSINESS INSTITUTE,

CEEDAR ROCK, N. C.

A first-class boarding school for boys and girls. We give instruction in all the branches of learning and also offer excellent advantages in the study of Book-keeping, Music, (piano, organ, and guitar), and Art. A teacher has already been employed who will devote her whole time to the Art Department, if necessary. The Music Department is well supplied with the very best instruments and under the tuition of an excellent and pains-taking teacher.

The position of Cedar Rock vicinity in respect to health, morality and refinement needs no description or commendation at my hands to the people of Franklin County.

Board \$7.00 per month. Tuition, from \$1.00 to \$3.50 per month. Music \$12.50 per term. (No extra charge for use of instruments.)

We now have a strong and proficient teaching force and can do you the very best work at rates named above.

We wish to call your special attention to the course we have for those desiring to teach either in public or private school. We direct you in the study of those branches absolutely necessary to public school teaching. Our school furnished eight teachers for the public schools of Franklin and adjoining counties the past spring, the majority of whom obtained high marks on their certificates. A good, cheap school. Make up your mind to be with us next session.

Young men and young ladies will not be allowed to board at the same boarding house as heretofore.

The next session begins August 19th, 1895.

For further information and catalogue, address,

W. A. SMITH, B. A., Prin.

FARMERS, Remember,

LOUISBURG is the place to sell your Tobacco and HUGHES BROS., are the men to sell it for you.

ICE. ICE. ICE.

THE LOUISBURG ICE COMPANY,

Composed of R. Y. Yarboro, J. H. Upperman and W. J. Neal, are prepared to furnish the public with the very best manufactured ice.

—AT—

Reasonable prices, delivered anywhere in town.

Orders left with W. J. Neal or R. Y. Yarboro, will be promptly filled. Those desiring ice on Sunday should send to the house early in the morning, or leave their orders Saturday evening.

LADIES AND GENTLEMEN

Who wish nice shampooing or hair dressing done, will do well to call on W. M. ALSTON & L. W. EGRERTON. Ladies have your bang cut right. We have Van's Mexican Hair Restorative, Ayer's Hair Vigor, Tricopherous for the hair and skin, nothing to beat it to keep the hair from falling out.

HOTEL WOODARD,

W. C. WOODARD, Prop., Rocky Mount, N. C. Free Bus meets all trains. Rates \$3 per day.

University of North Carolina.

Comprises the University, the College, the Law and Medical Schools, and the Summer School for Teachers. Tuition \$60, 35 Teachers, 471 Students. Address President Winston, Chapel Hill, N. C. for Catalogue and handbook on "University Education."

Thomas' Warehouse is

the place for high prices. Large orders, Plenty of Money, Polit, honest treatment.

LOUISBURG Carriage Shops,

H. C. TAYLOR, Proprietor.

If your Carriage, Buggy, Wagon or anything in that line needs repairing and you want it done right, bring it to me, and if you want your Carriage or Buggy repainted in a first-class manner, bring it to me also. I have served my time under a first-class painter and wood workman, can therefore guarantee satisfaction in all work entrusted to me.

I have a first-class black smith in the black smith shop who fully understands everything about his business, from shoeing a horse to ironing a fine tuggy.

It does not pay to have your work botched up, so bring it along to me where it WILL BE DONE RIGHT, my prices are reasonable.

I make Buggies and Wagons to order. If you want a good HOME-MADE Buggy or Wagon, give me your orders, and you shall have what you want.

Thanking my friends for their patronage in the past and soliciting the same in future, I am,

Yours very respectfully,
H. C. TAYLOR.

Build up Home.
