The So-called "Dissol ved Bone."

It is the common opinion of many, who are in the habit of using dissolved bone as a fertilizing application, that it is made from animal bone dissolved with acid Such, however, is not the case. Most of these so-called "dissolved bones" are merely acid phosphates made by treating phosphate rock with sulphuric acid. It is true that there are some dissolved bones made from animal bones sold in North Carolina, but there are not many. The true dissolved bone can always be told by the fact that it contains ammonia in addition to available phosphoric acid. The ammonia is derived from the nitrogenous material of the bone, the following unsolicited testimonial which is also present after treatment with sulphuric acid. true dissolved bone is more efficient than the so-called animal bone method of informing them, if you only from the fact that it contains will be so kind as to give it space nitrogen (or ammonia) in addition to phosphoric acid. Trouble in Halifax.

Halifax county had a stock law. and the last legislature passed an act allowing stock to run at large from December 25th to March Danghters of Veterans, and others interested 25th. The crops are not all out of the fields, and the stock is loose. Louisville, Ky and the people are mad, and reports say that some of them are going to adopt the shot gun policy as to the stock, and once adopted it may go further. The act was passed before the good people of Halifax knew it was thought of, and when they found it out they came to Raleigh by representatives, but could get nothing done They were mad then and are mad yet, and may shoot stock .- Ex.
