South America Trade.

Washington, May 31.—The United States Department of Commerce has just issued a comprehensive report on "South America as an expert field" which is of special interest at this time in connection with the work being done by the Southern Railway Company and the companies associated with it in developing trade with South America by way of the Southern ports served by their lines. This report contains some interesting information as to the methods pursued by the United Kingdom and Germany which are the two great competitors of the United States in supplying South American markets, and President Harrison of the Southern Railway Company today called attention to the following extract from it as containing valuable suggestions for Southern manufacturers and merchants who are interested in the trade opportunities of South America:

"The Germans owe a great deal to their banks, which lend active assistance to schemes of trade promotion; and the facility with which shipments are financed and credits handled through them has been noted as one of the greatest German assets in building up their South American trade. The most important influence for creating this result, however, has been the thorough manner in which the Germans have invested the special features of each particular market and the peoples desire. It is the established custom for young men from Germany who intend to engage in the export to spend some years in South America as a part of their commercial education, learning the language and studying the habits of the people. Through them a first-hand and detailed knowledge of the trade is acquired, and the information gained is closely followed. There are also in Germany many private and semi-official associations devoted especially to the furtherance of the German export trade, and these not only disseminate information as to the kind

of particular articles required by the trade but often subsidize agents to South America and other foreign fields, who make a study of market conditions. The co-operation of all German influences in South America toward the one object of furthering trade has often been remarked, and it has resulted in the present high commercial position of the country in all parts of the continent. The promotion of United States trade in South America does not necessarily depend on following either English or German methods, but, as in the case of those countries, both the investment of American capital and the closer attention to details on the part of American exporters have been important factors in the trade increase of the last few years."

Important to Corn Growers.

The five main objects of cultivation are as follows:

1. To prevent weeds;
2. To save moisture;
3. To make food available;
4. To warm the soil;
5. To help germination. These things are still of importance to the farmer and club boy who wish to make large and profitable crops of corn and other crops.

A severe drought is prevalent over most of the State at present, May 27th. Farmers who have not farmed properly have much hard and cloddy land. Still it is not yet too late to make a good crop. The most critical time in making a crop of corn is when the ear is getting growth. It needs much moisture then because it needs much plant food. As before stated, the way to save the moisture is by keeping the soil loose on top, simply by keeping a dirt or soil mulch one or two inches deep. Do not let the land stay packed after rains. Do not let a crust form. Cultivate often and shallow when the ground is not too wet. Keep this up all through June for early corn or until it is in full tassel and "silk." During dry weather it sometimes pays to keep up the cultivation until some of the "silks" begin to turn brown, provided cultivation has been often previously. Much corn has often been lost by "laying by" too early.

If the corn is pale, and not doing well, perhaps 100 pounds of nitrate of soda per acre will help it. This should be applied broadcast just before cultivation when the corn is between one and three feet high.

Rebels Have Killed The Huerta Officer Who Refused Salute.

Washington, D. C., May 30.—A telegram to the Washington Herald from Tampico says that Col. Adolpho Hinojosa, whose arrest of the paymaster of the gunboat Dolphin brought the Mexican situation to a crisis, has been executed by the rebels. Hinojosa was caught in the interior by two rebel officers, who had sworn to avenge the insult to the United States. He was executed by a double firing squad.

It was because of the arrest of the Doplin's paymaster and boat crew that Rear Admiral Mayo demanded that the Mexican commander apologize and salute the flag.
