How much Gasoline Do You Waste?

Continued use of a low grade of gasoline results in an average wastage of almost 90% in fuel energy! Even the best engines unavoidably waste great quantities of potential power. But the principal source of unnecessary energy loss is in the use of poor gasoline.

Unless gasoline of a uniformly high quality is supplied, the motor functions unevenly, sometimes burning the fuel cleanly, but more often discharging a large proportion of it, unburnt or only partially burnt, into the muffler. This means loss of power and is the cause of crank-case dilution and other troubles.

Use motor fuel of definite quality, and unnecessary waste will be eliminated. The improved gasoline now available wherever you see the familiar "S. O." sign is the best that you can buy. "Standard" Motor Gasoline is clean-burning, quick-firing, and releases a maximum of steady, smooth power. It will be more than worth while for you to give it a careful trial. You might as well have the best, for it costs no more.
