

Friendly Enemies

When bloodless battles are raging in the House of Representatives, these two fiery southerners from Tennessee, Finis J. Garrett, (left) and John Q. Tilson are always to be found where the argument is hottest. Leaders of their respective Democratic and Republican party factions, they are continually at sword's points.

MANURE AN AID IN CLOVER

Raleigh, Jan. 4.—Manure spread on the small grain fields where red clover is expected to be sown will help the clover to get a start and will to some extent overcome the lack of lime. This manure may be put out during the dry days of January and February or when the land is frozen so that the soil is not puddled by the work.

Many farmers in Piedmont and mountain North Carolina have sown small grain on land that they would like to put in clover this spring, says E. C. Blair, extension agronomist at State College. "Some of these men will hesitate to sow the clover because they were unable to buy lime for applying to the land before sowing the grain. These men may profit by the experience of L. L. Miller of Davie county.

"Mr. Miller always grew red clover almost perfectly but because he lived ten miles from the railroad and never used any lime due to high hauling cost, his land finally became too acid to grow clover at all. During the winter of 1923-24, he was advised by his county agent to manure a field of 16 acres planted to wheat and to sow clover just as he had done in the past. He did so. The clover caught and held for the first time in several years. Last season, 1925, Mr. Miller cut 1,500 pounds of hay per acre from the first crop and would have made a ton had the spring been at all favorable to the crop."

Mr. Blair reports that no lime has

ever been used on this land and the crop of clover was due entirely to the manure used. This was doubly proven when an unmanured strip of 25 feet failed to give a stand.

"Manure does not take the place of lime," says Mr. Blair, "but the chance of getting a stand of clover on a manured field is good. The seed should be sown over the small grain with a drill during the latter part of March, using about 100 pounds of acid phosphate as fertilizer.

NOTICE

Having qualified as administrator of the estate of Mrs. Ellen Pruitt, deceased, late of Franklin County, N. C., notice is hereby given all persons holding claims against said estate to present them to the undersigned on or before the 8th day of January, 1927, or this notice will be plead in bar of their recovery. All persons indebted to said estate will please come forward and make immediate settlement. This January 7, 1926.

G. S. EARP, Administrator.

MT. MCKINLEY OPENS UP FOR VOLCANIC ACTION; CHANGE OF CLIMATE IN ALASKA EXPECTED

Since Shishaldin Erupted in September, Territory Previously Ice-Bound Enjoys Spring-Like Weather; Same Transformation Likely to Occur Further North as America's loftiest Peak Belches Forth Flames

Anchorage, Alaska, Dec. 30.—(AP)—The return of volcanic activity to North America's loftiest peak, Mount McKinley, 20,000 feet high, indicated by the volume of smoke and steam seen rising from the mountain and an earthquake felt here yesterday, is one of a series of volcanic phenomena in which many observers today saw a promise of radical permanent climatic changes for this southern part of Alaska.

Since Mount Shishaldin, in the Aleutians, 800 miles southwest of McKinley, erupted November 11, this region has experienced a spring-like November and December, unparalleled in the memory of the oldest inhabitant. Streams, usually frozen at this season have remained open and in place of the usual snow-bound landscape is green vegetation. The affected area covers several hundred square miles, all along Cook Inlet, to the northwest of which Mount McKinley rises, and far up into the valley of the Sushinta river. Anchorage had a Fahrenheit temperature of 28 degrees above Christ mas Day, when the mercury usually is around zero.

Shifted Northward Mount McKinley's smoking appears to mean a shifting northward of Alaskan volcanic activity, which hitherto has centered in the southern end of the Alaskan range, of which McKinley is a northern outpost. The greatest recent outburst was in 1912, when Mount Katmai blew off its three-mile-wide cap, and the valley of the Ten Thousand Smokes came into being. A year ago Mount Pavlof erupted and last month Mount Shishaldin followed suit. Each of these eruptions was accompanied by earthquakes and climatic changes. Since the Sheshaldin blow-off the warm air from Cook Inlet's heated waters has caused considerable melting of large glaciers.

Fires Moving Up Observers believe that subterranean fires are being turned northward producing temperatures below the ocean surface, which like the Gulf stream and the Japan Current, cast their warming influence inland. Geologists consider these forces similar to those which ages ago submerged the land bridge between North America and Asia and while no such major alteration is probable now, many think the banishment of the former bitter winters from this part of Alaska may be permanent.

THE WEATHER CHANGES

Every old timer will tell you that we don't have winters now like those in the old days. When the boys and girls thought a bobbed party was the last word in fun—and they were right—and when nobody thought a thing of having to go out on a below zero morning to thaw out the pump.

Maybe they're right, maybe wrong. And by the way, the old timers are often more nearly right than young folk give them credit for. However that may be, the truth is that this old earth is by no means stationary as regards climate, and there is no guarantee whatever that we and our grandchildren will experience the same kind of weather.

A case in point is the recent excavation, in a mine digging in Alaska, of the bones and a section of hide of a mastodon. The animal, scientists declare, never could have survived Alaska's present cold. It was a monstrous beast, but it thrived best in the warmth.

So, they reason, Alaska once may have been as warm as Florida is now. 'Twas a matter of years—somewhere between a quarter billion and two-billion. Nature usually is slow, usually thorough. But who knows what whims may seize her? The next time you hear the story of the weather in grandfather's day, lend a respectful ear. You may have occasion to tell your grandson some day of the time when there were horses.

Absence of presents never makes the heart grow fonder.

PAIN WAS BETTER IN TWENTY MINUTES

Uses simple home treatment — gets quick relief

"In twenty minutes I was better. In a very short time—peacefully asleep. In the morning all pain was gone."

This is the experience of a woman living in Oakland, California, who was seized in the night with an acute pain in her side, alarmingly like pleurisy.

"I applied Sloan's Liniment," she said, "and now I shall never allow one bottle to be empty before buying another."

What is the magic of this amazingly effective remedy?

Sloan's sends an increased supply of healing blood right to the spot that hurts—that's what conquers the pain. No need to rub. Sloan's does the whole job. Just pat it on. Quickly and surely, it kills pain, reduces swelling and inflammation, drives out stiffness from lame muscles. Clean and easy to use. All druggists—35 cents.

Sloan's Liniment

Honey is no longer a luxury but a necessity. The time is here when you should fine food containing needed mineral salts and vitamins not found in manufactured syrups, state beekeeping specialists.

This is the season of the year when most people like chicken just as well as turkey anyway. Holiday suggestion: Candy may be gradually worn off the seat of the most people by putting sandpaper on the chair seats.
