The ex-kaiser still thinks he's king and over in this country we have insane hospitals for this type of people.

Too much money will make you unhappy unless you have it yourself, and then very frequently it does.

Nobody would object so much to automobile casualties if they were confined to the fool drivers who cause them.

Hogs owned by 206 farmers this past year paid \$2.05 for each bushel of corn fed, report 17 farm agents of State College.

Henry Ford says that he believes in reincarnation. Wonder what a Ford will be in the next world?

A pessimist can't go forward because he always has the brakes on to keep from going backwards.

Challapin, the great Russian basso, says he wouldn't sing for the Chicago Opera Company for \$1000 a minute. That's expensive language.

A group of farmers in Beaufort County sold 2,000 bushels of surplus corn through their county agent.

The great trouble with the flaming youth is that they are saying it with pistols entirely too much.

### SAVE MAPLE TREES WITH OIL SPRAY

Raleigh, March 4.—Many maple trees in the cities and town of eastern and central Carolina are dead or dying because of the attacks of gloomy scale.

"This is a small black insect which covers the twigs and branches," says Z. P. Metcalf, entomologist at the North Carolina State College. "It usually attacks the soft maples but not the hard ones, therefore the obvious preventative is to plant trees not usually attacked by the insect. Oaks and hard maples are good shade trees and resistant to the gloomy scale as well as many other insects. They grow slowly, it is true, but when one considers that the scale causes the soft maples to be stunted and that these trees break easily in storm, it appears that it is hardly worth while to plant them."

The standard remedy for controlling the gloomy scale is to spray the maples thoroughly once each year, either late in the winter or early in the spring with a mixture composed of one gallon of soluble oil to eight or ten gallons of water. The soluble oils, states Dr. Metcalf, are those heavy oils which make a milky emulsion when mixed with water. This mixture kills only those insects which it touches and therefore the spraying must be done thoroughly.

Dr. Metcalf advises against putting on too much of the mixture because oil injury has been reported to his office several times from different parts of the State. However, a tree that is heavily infested will require more spraying than one only slightly infested. One careful spraying is worth two or more careless treatments and the regular method advised by Dr. Metcalf is one spraying each year during the dormant life of the tree. Apparently scale insects are more susceptible early in the spring just before the buds swell and this, therefore, is the most effective time to spray. Summer sprayings are not successful because the mixtures cannot be made strong enough without injuring the trees.

### PUNKIN CENTER

Mr. Editor: It has been some time since you heard from me and the Monkey, and for fear that you might think that we have disappeared again I will say to you that such is not the case. We are still at home and kicking but not very high as we both are too old and too badly afflicted with the ruma-tis to do much high kicking these days. We had a pretty tough time of it during the cold spell and snow, as our beer froze and we couldn't make a drop of grass killer to cure our bad colds. I think we will have to do away with our still altogether as we are getting too old and stiff to run like we did in our boy days, so we would be an easy prey for Sheriff Tanlac should he ever walk up on us while at work at our grass killer plant. I had two very disagreeable callers the other day, Professor Ben Burrows and Spanish Monkey paid me a short visit and the Professor brought his costly flute (10 cents) with him, and the music we made would make Sousa ashamed of himself. The Monkey tried to dance a little but his old joints were too stiff to do much of it. He said if I had had some grass killer so that we could take a drink together like we did 40 years ago he could cut the pidgen whing to perfection. As there were no girls near by at that time he said he was not afraid to take a drink with me. We had a greasy meat time for an hour or so, and I hope the Professor will bring the Monkey down again soon and maybe next time may have a little grass killer to limber up the Monkey's joints. I want to congratulate you Mr. Editor, but taint fair for you to get married twice to me nary one. But maybe my time will come some day and Punkin Centre can boast of a Mrs. President as well as a Mrs. Monkey. Now Mr. Editor I have three requests to make of you.

- 1st. If you ever have occasion to print the name Harry in your paper, for the love of mike leave off the K.
- 2nd. If you ever have occasion to print the name Almee, for the love of one thousand mikes leave off the Semple.
- 3rd. If you ever have occasion to print the name Browning for the love of ten thousand mikes leave off the Peaches.

PRESIDENT.

Tom Tarheel says he considers it his duty to his neighbors to tell them not to plant much cotton this year.

"I have been buying your 'AA Quality' Fertilizers for the past ten years and I can safely recommend them as being high-class fertilizers. I have used them under tobacco and cotton and have always obtained good results from their use. I have picked as high as two thousand pounds of seed cotton per acre from the use of your goods. This year has been very dry, but I will get 1500 pounds of seed cotton per acre. I can safely recommend them to fertilizer users as being goods of the very highest quality."  
—J. T. Mann

Ellenboro, N. C., Oct. 14, 1926  
"I thought you might be interested to know just how I came out with the use of 'AA Quality' Fertilizer for cotton. I used four hundred pounds per acre, and with the dry season and the cotton hopper also, working on it, I will make one thousand pounds of seed cotton per acre—against eight hundred pounds of seed cotton per acre with regular fertilizer. "I can recommend 'AA Quality' Fertilizer to my trade as I am a dealer, as well as a consumer of fertilizers."  
—Oscar Podgett

## Plant fewer fields in cotton— but make each field produce more

IT ISN'T the number of acres you plant in cotton that makes the big cotton-money. It's the number of dollars that each individual acre brings back to you.

Intensify your yield through the use of "AA Quality" Cotton Fertilizers—made expressly for cotton growing. Their formulas are the result of years of scientific study and test by famous soil and crop experts. Their absolutely dependable mechanical condition has been obtained through sixty years

of manufacturing experience. They can be distributed easily and evenly.

The materials used in "AA Quality" Fertilizers are carefully selected, thoroughly mixed, cured and remilled. Blended so as to give each plant a correctly balanced food and promote a steady, even development.

"AA Quality" Fertilizers give you more cotton to the acre—and better cotton too! They are always reliable. Play safe and use
