### It's a Surprise!

If there are those who have thought that they could not take cod-liver oil nourishment, there is a surprise in store for them when they take

### Scott's Emulsion

It is pleasing to the palate and is assimilated so readily that it is the exceptional person who cannot take it easily. If you are run-down in strength, take Scott's Emulsion!

Scott & Bowne, Bloomfield, N. J. 22-23

### BUNN NEWS

(Continued from Page Three)

there will be little reason for failure whenever our tobacco growers again decide to make themselves masters of their own industry as they ought to do.

The road to efficiency and success in cooperative marketing is being made so clear that the wayfaring man need not err therein.

### The Ideal Plant Bed

The ideal plant bed is similar to the old type used now-a-days. The cost of one of these beds is very much more than the common used. If more of these beds were used, there would be less insects in our fields. The way of constructing one of these beds is as follows:

The first thing to do is to clean off the bed and burn it if planning to burn. The control bed is made of sawed boards, which are buried in the ground an inch or so. This bed is covered with extra heavy tobacco cloth, free from small holes. It is better to tack the cloth by means of laths, so that no holes whatever are left for flea bugs to enter. A strip of tobacco bed is then sown around the central bed about three feet wide. Poles are laid on the ground, and this strip is covered with ordinary cloth tacked to the boards on one side and fastened to the poles at the other. This is an ideal plant bed and is commonly called a trap bed. We mean trap bed to catch all insects or flea bugs and the bed sown around the central bed. By doing this one may grow more healthy plants and have less diseased tobacco. When poisoning a bed like this you only spray the strip sown around the bed. The person having the less diseased tobacco expects to get a higher price for his tobacco. The best way to control insects is in the plant bed. Several tobacco farmers have estimated that it is worth \$20 per acre more to them.

### Dairying Now Classed As World's Largest Industry

Raleigh, Feb. 11.—Growing, handling and feeding cows and dealing in their products is now the world's largest industry.

Quoting Dr. C. W. Larsen, former chief of the dairy industry bureau at Washington, Fred M. Haig of State College says that fifty years ago, the dairy industry was undeveloped, unscientific and relatively unimportant. Today the dairy industry of the United States is the largest and most vital industry in the world. It has a far-reaching effect upon health and prosperity. In 1926, says Mr. Haig, the United States produced one hundred and twenty-one billion pounds of milk. The population of this country is increasing at the rate of about one million and a half each year and since 1916, the production and consumption of dairy products has increased 51 percent.

The number of dairy cows per thousand consumers has increased only 16 per cent, showing that dairymen are not trying to see how many cows they can feed but are getting more milk from less cows. There is no economy, says Mr. Haig, in keeping 20 cows when ten good animals will produce more milk than the 20 low grade ones. In 1916, he finds, the average amount of milk produced per cow in the United States was 3,700 pounds. In 1926, this amount was 4,700 pounds per cow.

"Pure milk," says Mr. Haig, "contains all food elements in proper proportion, including minerals and vitamins, for the growth and health of young and old. This food is in the most digestible and economical form. Every child should have at least one quart of milk each day. There is no substitute for butter; cheese is a real food and ice cream is delicious and nutritious. A survey made recently showed that 20 per cent of the consumers food dollar was used for dairy products."

### Birthday Supper

On February 1, little Miss Edna Earl Murphy entertained a number of little friends at a birthday supper, in honor of her sixth birthday.

At 4:30 o'clock, the guests began to arrive, bringing little presents which were received with much joy by the little hostess.

At 5:30 the little group was served a delicious supper of meats and sweets, following which they enjoyed themselves playing games and being entertained with music.

The little guests declaring they had spent a most delightful evening, began to leave about 8 o'clock, wishing Edna Earl many more such birthday days and a long and happy life.

Those present at the supper were Louise and Irene Murphy, Edith Joyner, and Alice Gilliam of Sandy Creek and Gerlie Lou Brewer and Bettie Lou Murphy of White Level.

Going through life on high makes it a short journey.

# INSURING THE FUTURE

Men often make the mistake, when at the productive age of life, not to insure the future. They fail to lay aside something each week that will form a comfortable "nest egg" when they are not able to earn as much.

If you are at the productive age of life—remember that by starting a savings account you not alone insure your own happiness, but that of your loved ones in later years.

We will be pleased to show you the way to start an account and will help it grow by paying 4 per cent interest.

This is only one phase of our banking service. We can take care of all your requirements.
