There is a "Death Chamber" in the FLY-TOX factory. This chamber is about the room size. It is used to test the quality of FLY-TOX as a spray to kill flies, mosquitos, bedbugs, roaches, etc. During a test a large number of young, healthy insects are placed inside the cabinet. These insects are raised in incubators for testing purposes. While the insects are flying and crawling around in the "Chamber of Death," FLY-TOX is sprayed inside. Less than a teaspoonful is used. Instantly there is a change. Within five minutes not a buzz is heard. All insects are dead. To make sure they are really dead, the insects are carefully removed from the "Chamber of Death" and placed in incubators in an effort to revive them. If a wing flutter, the FLY-TOX tested never leaves the factory. This test is your guarantee of FLY-TOX quality. It does what you want it to do—kill insects in and about your home. Yet, FLY-TOX is positively harmless to people. FLY-TOX was developed at Mellon Institute of Industrial Research fellowship. It will not stain. Has a perfume-like fragrance. There is only one FLY-TOX—insist upon the genuine in bottles with blue labels.—Adv.
