## **Rust Proofing** Adopted For Cars

The first large commercial ap-plication of a new rust proofing process has been made by Chevprocess has been made by Chev-rolet Motor Company with the in-stallation of special equipment for the "cromodizing" of fenders, running boards, and other sheet metal parts. The new process dif-fers widely from others used in the automotive industry, in that the rust-proofing is accomplished as the parts pass on a conveyor through a series of spray booths, and the treatment, instead of forming a brittle coating over the surface, combines with the metal and changes it chemically to form a rust proof surface. Numerous manufacturing ad-

Numerous manufacturing ad-vantages, and extra benefits to the car owner, are claimed for the new process, which was deve-loped by the Chevrolet manufacwith the laboratories of the Ameri-can Chemical Paint Company, and tested by the General Motors re-search laboratories. Since the treatment of the sheet metal is the last step before the enamel-ing of the parts, the cromodis-ing equipment is installed at the assembly plant rather than at the manufacturing plant where the stampings are made. The new Baltimore assembly plant was the first of Chevrolet's ten plants in the United States to be equipped for the cromoding process No snfor the cromodine process. No an-

for the cromodine process. No an-nouncement of the new process was made at the time, pending its adoption for use in all of the com-pany's assembly plants. Fenders and other parts that are cromodized exhibit a great re-sistance to not only rust, but to corrosion caused by salt and other chemicals used in the treatment of hiebways to control dust or of highways to control dust or to melt snow and ice. Severe ac-celerated tests, it is said, have indicated that the new process doubles the life of fenders. Or account of the simplicity of the process, absolute uniformity is assured. The treated parts possess an absolutely smooth surface, since the rust proofing does not depend on material adhering to the surface, but on a change in the surface itself. Improved enameling results from the smooth-ness of the finish and the ease with which it takes and holds the enamel.

The firm bond between the metal and the rust proofing is an important feature to the car owner, since it permits the repair of dented fenders without damaging the protective coating, which can-

The new process is used by Chevrolet on both the Master de luxe and the Standard passenger cars and on trucks and commercial cars as well.

### COTTON LOAN ASSURES **12 CENTS TO FARMERS**

Under the 10-cent loan policy of the AAA, every cotton grower cooperating in the adjustment program is being guaranteed at least 12 cents a pound for his 1935 crop. The loan will assure the grow-

ers of at least 10 cents a pound from the sale of their cotton, said Dean I. O. Schaub, of State College, since they can secure that amount from the loan fund at

In fact, he added, if the mar-ket should drop below 10 cents, the growers will be expected to place their cotton in the pool, where it may be left indefinitely or until prices recover.

In addition, provision has been made for an adjustment payment up to two cents a pound, if neces-eary, to assure the growers a total return of not less than 12 cents

NEW YORK. ... Fall hat styles in all their glory grace fashion center shops here as milady makes selections. Two distinctive models (above) afford her highness choice of up or down styles. Left, a brilliant red, yellow, blue and green parrot perches on a black velvet sport hat with pleats pressed into brim and crown. Right, the Mercury hat with pleated felt simulating wings is extremely smart. wings is extremely smart.
