Cotton Adjustment Payments
374 Applications Paid

Producers on 374 farms have received slightly in excess of \$9,000.00 as Cotton Adjustment Payment for not exceeding their 1939 allotted cotton acreage. One thousand and eighty applications have been executed and sent to Washington for payment. Six hundred applications are signed and ready to be mailed to the State Office. Two hundred applications are being held for additional signatures and 900 applications are yet to be signed. The payment in the County this year should amount to approximately \$90,000. It is our desire to execute the forms and have payments ready to be delivered to farmers before Christmas announcements Nat H. Ayscue, Chairman of Franklin County Agricultural Conservation Association. All farmers who have not executed applications are urged to call by the Office at their very earliest convenience to execute forms that they may be rushed to Washington for payment.

Cotton Quotas To Be Announced Before Referendum

Cotton growers in Franklin County will be notified of their individual cotton allotments before voting December 9 in the Referendum on Cotton Marketing Quotas for 1940 announces Nat H. Ayscue, Chairman of Franklin County Agricultural Committee. Mr. Ayscue advised that all records on Franklin County farms had been summarized and mailed to the State Office for the purpose of having individual allotments calculated, which when received in the County Office will be issued to producers. Cotton allotments for 1940 will be on an acreage basis, as they have been for the past two years. Cotton producers voted about 84% in favor of cotton marketing quotas in 1938 and 1939. The Secretary of Agriculture, Henry A. Wallace, set the National Cotton Acreage to be allotted in 1940 at approximately 27 or 28 million acres which is about the same as in 1938 and 1939. Government officials expect this to produce about 12 million bales on the basis of 214 pounds of lint per acre, the average for the last five years. The same system of establishing individual quotas as has been followed in the past two years is being used this year.

When Is Wheat Wheat

Farmers planning to cooperate with the 1940 Agricultural Conservation Program should be careful not to exceed 10 acres of wheat in cases where they do not have wheat allotment advises Nat H. Ayscue, Chairman of Franklin County Agricultural Conservation Association. Mr. Ayscue further advised that small farmers attempting to plant wheat for the first time may be penalized \$5.00 an acre by exceeding total soil depleting acreage by planting 10 acres of wheat except in cases where other soil depleting crops are reduced accordingly.

As it is possible to confuse small grain crops with wheat, the following instructions are helpful in determining when wheat is wheat, Mr. Ayscue advises:

"The classification of mixtures of wheat and other crops for the 1940 Agricultural Conservation and Price Adjustment Programs is the same as that under the 1939 programs. The 1939 Bulletin provided that the acreage planted to wheat means any acreage seeded to wheat except when it is seeded in a mixture containing less than 50 per cent by weight of wheat or containing 25 per cent or more by weight of rye, barley, vetch or Austrian winter peas and the seeding may reasonable be expected to produce a crop that would not be harvested as wheat for grain or seed. An acreage of such mixture will be considered as planted to wheat if the crop other than wheat fails to mature and the wheat is harvested.

Consequently if a producer plants a mixture of wheat and vetch containing 25 per cent or more of vetch the land will not be classified as planted to wheat. You will note that vetch and Austrian winter peas are the only winter legumes that will be used under the 25 per cent provision. The use of crimson clover would require that less than 50 per cent of the seeding would be wheat.

Timely Farm Questions
Answered at State College

QUESTION: How can I keep skippers and other insects out of cured meat?

ANSWER: Be sure that the meat is protected from flies and you will have no trouble with meat insects. If the smokehouse is screened with No. 16 copper wire and well ventilated, the meat may be allowed to hang there until used without danger. If screening is not possible, as soon as the meat is smoked each piece should be wrapped separately in heavy wrapping paper, dropped in a thin cloth bag which should be tied securely, and hung in a cool, well ventilated smokehouse or cellar. This should be done as soon as the meat is smoked to suit taste.

QUESTION: What are the best size and age trees to plant in starting a peach orchard?

ANSWER: One-year old trees, three to four feet tall and measuring seven to eight-sixteenths are preferred as these trees can be headed higher at planting time than smaller trees and will develop the main branches at a greater distance from the ground. Some growers plant June budded trees, but these often branch so near the ground that the scaffold limbs cannot be established high enough to permit of proper cultivation. Trees having enlargements or wart like knobs on the larger roots or main stem just below the ground should not be planted.

QUESTION: How many old hens should be carried over for the next laying flock?

ANSWER: Many farm flock owners follow a practice of not keeping any hens more than two laying years, but breeding farms sometimes keep an average of from thirty to sixty percent of the hens from one year to the next. Select old hens usually are superior to medium pullets, and from a breeding standpoint are very desirable to have in the flock. Under no conditions should hens with short, shallow, and narrow bodies be kept in the laying flock as these birds are poor layers and will transmit these qualities to the offspring.

B. F. Goodrich Co. Names New Dealer

Announcement has been made of the appointment of Economy Auto Supply, located at W. Nash St., as a tire dealer for The B. F. Goodrich Company, to handle the complete line of Goodrich tires and accessories in Louisburg, N. C.

"Developments in tire engineering, distribution and merchandising by the Goodrich Company in recent months prompted our decision to obtain the Goodrich franchise in this territory," Mr. R. Lee Johnson said.

"Goodrich has manufactured rubber products for 69 years and was America's first tire builder. Many of today's outstanding principles of tire construction were first developed by Goodrich.

A very successful public speaker gives much of the credit to this idea: "I have four or five places where I can end my talk gracefully," he says. When he notices members of the audience beginning to squirm and fidget he concludes his speech when he gets to the closest ending.

THE TRUTH SIMPLY TOLD

Today's popularity of Doan's Pills, after many years of world-wide use, surely must be accepted as evidence of satisfactory results. A favorable public opinion supports that of the able physicians who test the value of Doan's under exacting laboratory conditions. These physicians, too, approve every word of advertising you read, the objective of which is only to recommend Doan's Pills as a good diuretic treatment for disorder of the kidney function and for relief of the pain and worry it causes.

If more people were aware of how the kidneys must constantly remove waste that cannot stay in the blood without injury to health, there would be better understanding of why the whole body suffers when kidneys lag, and diuretic medication would be more often employed.

Burning, scanty or too frequent urination sometimes warn of disturbed kidney function. You may suffer nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, puffiness under the eyes—feet weak, nervous, all played out.

Use Doan's Pills. It is better to rely on medicine that has won world-wide acclaim than on something less favorably known. Ask your neighbor!
