Questions

Answered at State College QUESTION: Is it too late to

ANSWER: The best dates for seeding in the spring is from February 15 to April 1. Carpet grass, dallis grass and lespedeza should be seeded during this period and may be sown on top of other grasses and clovers planted the previous fall. Berniuda grass eed is rarely used in this state, but if the seed is used, they should be planted in May or June. Cuttings from this crop are usually set out in February or March.

QUESTION: What is the best control for tobacco bud worms? ANSWER: The poisoned corn neal bait is the best known con-This is made by carefully mixing one pound of Arsenate of Lead with 50 pounds of corn meal. Applications of this poison should e made early in the morning when the bud is open. A small pinch of the mixture should be dropped in the center of the bud Applications should be made every veek or ten days until the plants are topped. One peck of the mixture will be sufficient to cover one acre of tobacco.

QUESTION: When should culling be started in the poultry flock?

ANSWER: For best results. culling should be a continuous process, but in the young flock the birds should be culled when eight to twelve weeks old. This is especially true when cockerels are to be raised for breeders. All through the growing period the birds should be carefully watched and all cockerels or pullets showing lack of vigor and development should be discarded. Select only those birds that are alert. vigorous, and show a healthful development.

dow openings. Take a look at a home under conwood time. Notice how

he framing timbers around every vindow opening are doubled.

Windows Determine Wall Space Second, the arrangement of your rooms, the arrangement of your furniture, is all done around the windows. Available wall space is largely determined by windows. On the outside the architectural harmony is largely determined by the placing or grouping of windows.

Thus you see how important windows are just from appearance alone. But appearance, important as it is, is only half of the story. Here are some of the other things that a good window should do:

Keep cold air out. Keep warm keep cold air out. Keep warn air in. Keep cool air in. Keep hot air out. Keep insects out. Keep dirt and dust out. Work freely under all conditions without rattling Provide ventilation when open. Be watertight when closed. Let light in. Give clear vision out. Add beauty to your home. Harmonize with your style of architecture.

No other architectural feature in house must perform so many

But It's True

Although the squid is about as large as a whale, it cannot cope with he monarch of the oceans in free-for-all fighting. However, once it sees hat a whale is getting an advantage, it plunges to the bottom, uses its entacles, tries to hold the whale down until the latter has been drowned. Whales, you know, must breathe real air to live.
