## 1 bale of cotton

*gives*

216 hours of work to a cotton farmer

*Making this cotton into 2,270 yards of cloth gives*

126 hours of work to a textile-mill operative

*Making this cloth into 13,600 5-lb. bags gives*

106 hours of work to a bag-factory employee

*cotton bags mean jobs*

In these hours of work American labor earns its wages, builds up its purchasing power, increases its effective market for the retailers who sell their product in bags, creates business on which the income of many related American businesses depends. The cotton dollar, whether it goes to farmer or mill hand is cash on the barrel head, spent quickly, spent powerfully by a vast group of buyers whose consumption habits—and consuming ability—guides the economy of not only the Cotton Belt but also the sections who sell to the Cotton Belt.

No substitute for cotton in bagging spreads work and wages over as broad a consumer base as cotton does. No other dollar means as powerfully in American business as the cotton dollar. Fellow consumers would do well to insist that the articles they buy are packed in cotton bags.

## Timely Farm Questions

Answered at State College

**QUESTION:** Will it pay to feed moist mash to my laying flock during the summer months?  
**ANSWER:** Moist mash has an important place in the feeding of most flocks at some time during the year and with the laying birds it should be fed through the summer to keep up egg production from June until October. The best time to feed this mash is about two o'clock each afternoon. Three pounds of the regular laying mash moistened with hot water or milk, preferably milk, for each 100 birds per day will give excellent results.

**QUESTION:** How can I keep my cream fresh and pure between marketing days?  
**ANSWER:** Immediately after milking remove the milk from the barn, strain and separate it. Cool the cream by placing the can in cold water so that the entire contents are below the surface of the

water. Stir occasionally to hasten cooling and keep it in cold water until it is taken to market. Warm cream should NOT be added to cold cream. Catch the cream as it comes from the separator and place this can in the cooling tank alongside the accumulated cold cream until the next separation. It can then be poured into the cold cream and mixed until the entire batch presents a uniform smooth body.

**QUESTION:** How often should poisoned bait be used to control bud worm damage in tobacco?  
**ANSWER:** Applications should begin ten days to two weeks after the plants are set and should be repeated every week or ten days until the plants are topped. Make the applications early in the morning when the tobacco bud is open by placing a small pinch of the poison directly in the CENTER of the bud. The bud worm prefers corn to tobacco so do not substitute any other ingredient in the bait for the corn meal. One peck of corn meal and six heaping tablespoonful of arsenate of lead will make enough bait for one acre of tobacco.

## Fast, Low-Cost TILLAGE

TAKE THE TIME- and MONEY-SAVING WAY WITH A JOHN DEERE DISK TILLER

Prepare your seed beds at minimum cost with a husky, big-capacity John Deere Disk Tiller, do your summer-fallowing in a big way, save valuable hours on wheatland tillage, do a better job, and get it done at the right time.

Heavily braced overhead frame prevents clogging. Frame weight above the disks aids penetration. Heavy-duty heat-treated disks. Enclosed heavy-duty power lift. Chilled bearings. Semi-floating hitch for easy control. Quick depth and angling adjustments.

Come in and learn all about the strong, cost-reducing John Deere Tillers.

We also have a full line of Farm Implements at Reasonable Prices.

Call in and let us show you.

## CIVIL SERVICE EXAMINATIONS ANNOUNCED

The United States Civil Service Commission has announced open competitive examinations to fill positions of instrument maker in the Federal Service. The examinations cover four grades, with salaries ranging from \$1,800 to \$2,600 a year, less a retirement deduction of 3 1/2 per cent.

Applications must be filed with the Commission's Washington office not later than July 1 if received from States east of Colorado, and not later than July 5, 1940, if received from Colorado and States westward.

Applicants must have completed a 4-year apprenticeship as instrument maker, or must have had certain experience in the trade, in either case including work with high-precision physical, geodetic, or similar scientific instruments. Certain substitution of apprenticeship or practical experience in the machinist or tool-maker trades may be allowed for part of this requirement. For the three higher grades additional journeyman experience as instrument maker is necessary. Applicants must not have passed their fiftieth birthday.

Full information may be obtained from J. A. Wheelers, Secretary of the U. S. Civil Service Board of Examiners, at the post office in this city, or from the Secretary of the U. S. Civil Service Board of Examiners at any first- or second-class post office.

## Wake Lazy Insides All-Vegetable Way

Here's a laxative that generally acts thoroughly, but is a gentle persuader if used by simple directions. Take BLACK-DRAUGHT at bedtime. There's usually time for a good night's rest. Morning generally brings a thorough evacuation; relief for constipation's headaches, dizziness. Try spicy, aromatic, all-vegetable BLACK-DRAUGHT. It's economical, too: 25 to 40 doses, 25c.

## WALLS IN HOME ONLY PART OF INSULATION PROBLEM

Many a home is being built today that is only half insulated. Yet the man who is spending his money to build the house doesn't know a thing about it. These people, when they build, won't hesitate to spend \$150 to \$200 to make their walls weather-tight. They will buy the best insulation, the best moisture barrier, and use the best construction method—but they overlook completely the fact that the walls of their homes have from ten to thirty great big holes in them that are filled only with windows. These holes must be filled with good windows—windows that do more than harmonize with the architecture of the home. For a window is not only an architectural feature. It is also a mechanical feature. Windows are just as permanent a part of the wall as insulation. Just as it is wise to spend those extra dollars for insulation—so it is wise to spend a few extra dollars to see that a window frame makes a permanent weather-tight joint with the wall, that window sash are precision fitted to the frame, that an efficient job of weatherstripping is done, that storm sash or double glazing is provided, and that the operating equipment used will give a lifetime of trouble-free operation.

A large number of Watauga County demonstration farmers are making plans to save part of their clover crop for seed, reports H. M. Hamilton, farm agent of the State College Extension Service. Peak digging of this year's Irish potato crop in Beaufort County should be reached between June 15 and 20, according to A. L. Eagles, assistant farm agent of the State College Extension Service.

## HERE'S THE REFRIGERATOR BUY OF YOUR LIFE!

The Biggest; Most Completely Equipped GENERAL ELECTRIC Ever Offered at this Low Price.

The Big New G-E Thrifty-Six Yours Today for only \$4.50 per month.

6.2 cu. ft. of Storage Space  
11.7 sq. ft. of Shelf Area

Stainless Steel Super Freezer  
8 lbs. of ice—4 trays—80 cubes

All-Steel Cabinet—All porcelain inside  
Famous G-E Sealed-in-Steel Thrift Unit

You'll Always Be Glad You Bought a G-E!

Thrifty in Price—in Current—in Upkeep! The same sturdy, electrically welded all-steel cabinet construction—the same quiet sealed-in-steel cold-making mechanism that have made G-E Refrigerators world-famous for long life and enduring economy.

SEE G-E!  
And you'll see the difference!
