Timely Farm Questions

Answered at State College

QUESTION: Are green tobacco stalks beneficial to the soil when plowed under?

ANSWER: The green stalks are beneficial to a certain degree. but the greatest benefit comes from the destruction of insect Suckers which grow upon pests. stalks left standing furnish a breeding and feeding ground for millions of insect pests which attack the crop the next season. For this reason alone all stalks should be cut and plowed under immediately after harvest. The stalks, however, do furnish a small amount of plant food, but this is negligible when compared with the benefits from insect con-

QUESTION: When should the most rigid culling be practiced in the poultry flock?

ANSWER: Culling is a year around job, but the flock should be watched most carefully, during July and August. This is the time for the early molters and as soon as molt appears or the hens stop laying they should be taken from the flock and sold or used at home. September and October is another favorable time to handle the old flock as most of the mediocre birds stop producing in late August or September, These birds also should be removed from the flock and disposed of in some way.

QUESTION: Should I feed grain to my newly-weaned lambs? ANSWER: If there is sufficient pasturage, grain is not necessary; but, if the pasture is poor, grain should be fed for at least two or three weeks after the lambs are taken from the ewe. If possible, the lambs should be put on pasture on which sheep have not been grazed. This will, to some extent, prevent infestation by stomach worms. Either soybeans or Sudan grass will furnish nutritious and succulent grazing through the summer months.

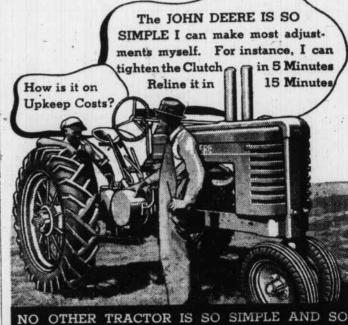

The domestic wheat supply for the 1940-41 season now seems likely to total about one billion bushels, about the same as for the current marketing season ending June 30.

Incidentally, what has become of the Kellogg-Briand pact outlawing war?

CARD OF THANKS

You don't have to be a skilled automotive mechanic to service a John Deere General Purpose Tractor-it's that simple. You can inspect and adjust practically all working parts from a standing position. Brakes and clutch can be adjusted in less than 5 minutes. Valves and tappets are located in the cylinder headthey're easy to get at. Everything is simplereasier to understand in the John Deere. That's why the average owner does 75% of his own servicing without any outside help.

EASY TO SERVICE AS A JOHN DEERE TRACTOR
