One simple and colorful salad is open peach halves, brushed with lemon juice, and whole pitted plums, stuffed with cream cheese and topped with diced nuts. Lay these on a bed of curly endive and top with mayonnaise or softened cream cheese, and you have a perfect luncheon salad or a side dish salad for dinner.

### Health And Beauty

Congenital heart disease occurs in a number of live births, with a small percentage of this group being due to the mother's having German measles in the first three months of pregnancy. The remaining cases of congenital heart disease are now felt to be possibly due to other virus infections-but many cases occur without any known cause for the abnormality.

Of the children born with a congenital heart defect today the outlook is now good, thanks to all the recent advances in the knowledge of congenital defects and in the development of surgical techniques for correcting the abnormalities.

Children with congenital heart defects show various symptoms that become obvious at variable times after birth-such as respiratory distress evidenced by shortness

of breath, also many will show marked physical retardation; other children will show clubbing of the fingers and in some the entire body will have a bluish discoloration.

Most children with a cardiac defect will have a heart murmur at birth, but some will be several years old before the abnormality is observed. Most authorities recommend that the child with a suspected congenital heart defect be four or five years old before steps are taken to see whether or not the particular abnormality is amenable to surgery.

At the time of this examination a thorough medical history and physical examination is done, including X-ray, and fluoroscopic studies of the heart, also an electrocardiogram and various blood studies are necessary.
