weeks drought, must have four inches soil and six inches subsoil ; three weeks, six inches soil and same subsoil; four weeks, sight inches and the same subsoiling.

9. If you prepare your land and carry out this plan well, and manure liberally, you may expect from four bundred to one thousand pounds of

lint cotton per acre. 10. Fertilizers bring a crop of bolls on the cotton early.

11. To improve the cotton plant, select seed every year after the first picking, up to the middle of October, taking the best stalks and the best bolls on the stalk.

12. On all farms there are some acres that produce cotton better than others ; seed should always be selected from those spots. .

13. Manure everywhere you plow and plant; your labor will be more certainly rewarded. It pays to ne
