Burn the Grape Leaves.

It will perhaps be out of the line of you readers who have vineyards | grain.

the time for destroying the grape milkew is not up until every leaf has been burned. There is a second kind of spore (or seed) formed in autumn within the substance of the foliage, and is designed to remain in a dormant condition until spring, when, liberated from the leaves by decay, they germinate and introduce the mildew for another season of destructive work. These winter spores, as they may well be called, have thick coverings provided for them, and will not be destroyed if the grape leaves are used for litter or placed in the compost heap. Any disposition like this would only aid the spores in their escape from the inner sub stance of the grape leaves, and discontented mind, having worn help to distribute them far and

> The only thing is to gather the leaves after they have fallen from the vines, and burn them. This is a small amount of work and only needs to be done once in a season.

Millions in Sorghum.

According to a Kansas paper the rowth of sorghum in that State for the year is exceptionally promising. The Kansas Sugar Works at Sterling are operated by a joint he had dishes of assorted sweet stock company composed of Illinois and Massachusetts capitalists. The cost of the plant, building and machinery is \$45,000, including steam boilers of 350-horse power, with crusher and other machinery with a capacity of handling 250 tons of of Gabrielle d'Estress with sweetcane per day, and a vacuum pan meats and preserved fruits. equal to turning out 90,000 pounds

of sugar daily. The number of hands employed is 60, with a weeky pay-roll of \$500. Fifteen hun-
