Mr. B. took you to make another motion, and with Spain of 1819, by which we acquired Florida. The third is $5,546,27 paid to the States for claims assumed on account of war debts. The fourth is $47,714 53 for the three per cents on account of the new States and Territories, and the fifth is $17,000 on account of the two per cents to the new States for the Cumberland road within their limits. The fifth is $17,000 on account of the two per cents to the new States for the Cumberland road within their limits. The sixth is $1,875 19 for surveying the coasts. The seventh is $760,000 for the public buildings. The eighth is $129,972 04 for bridges and roads, canals, and light-houses, and improvements in rivers and harbors, except the Cumberland road, which was stated by itself. The tenth is $171,155 43 for pensions, except those arising from the military establishment. The eleventh is $1,207,690 41 for the military establishment. The twelfth is $120,087 90 for public debt, to $4,232,296 06. This total added to the sum paid on account of the public debt, makes the sum paid on account of the public debt, as stated in the table, because it is the last. Let us proceed with this examination, and see what the entire, actual cost of the service will be——

Commencing with the aggregate payments from the 1st of January to the 30th of September, 1824, and referring to the second table, under the year 1824, it would be seen how the aggregate of the first column is reduced to thirteen and a half. It was a great reduction; a reduction of nearly two-thirds from the aggregate amount paid out; and left for the proper expenses of the Government—its ordinary and permanent expenses—seventeen million of dollars, covering an immense extent of territory, and acting a part among the great powers of the world. To trace this reduction—to show the reasons of the difference between the first and the third columns, Mr. B. would follow the same process which he had pursued in explaining the expenditures of the year 1824, and ask for nothing to one case which had not been granted in the other.

1. The first item to be deducted from the aggregate of the first column, is seven million of the public debt. It was paid in redemption of Treasury notes; and these notes were so much debt incurred to the war, and for the purpose of carrying it on. The latter sum was itself reduced to $13,938,600 18; and, referring to the second table, under the year 1830, and to the foot of the first column in that table, that they amounted to $37,129,305 80; and that this sum was reduced to $25,362,707 75; and that the difference between these two sums, $11,766,598 05, was paid in the course of the year 1830, and constituted the whole amount of the public debt paid in that year. The first item to be deducted from the aggregate of the first column, is seven million of the public debt, for it
