

COWS.

The extreme sensitiveness of the mammary functions in cows to the influences of cold, fatigue, excitement, unpleasant odors, etc., is indeed surprising. We have been greatly interested in observing the effects of cold upon the milk secretion as seen in the herd of cows upon the farm at Lake-

imals resorted to the lake to drink, for over \$12,000. Hartford county and, after slaking their thirst, they would wade into the water, and remain sometimes an hour or two, with legs half immersed. This habit it was found invariably diminished the flow of milk at night, and in order to learn

the extent of the diminution careful observations were made. It was as- ed to during fine weather in winter, certained that standing in the water which we frequently have in the an hour diminished the flow to the South is the pruning of large or old amount of eight or ten quarts in a trees, (there is little use for the knife herd of thirteen cows. The loss was among young trees); dead limbs are so great that whenever they resorted of common occurrence. Some have to the water they were driven away been broken off by the weight of the to the pasture again at once. We have fruit, or by the winds of last year.learned that from simply turning the With a sharp, fine toothed hand herd into the yard upon a cold day in saw, and a ladder, the larger dead or winter, and allowing them to remain decaying branches or stumps may fifteen minutes, the flow of milk was soon be removed. The smaller water diminished to a serious extent, and sprouts or sucker mays be convenientconsequently the animals are not now by taken away by means of a stoul allowed to leave the warm stable du- steket chisel, with a basil and edge in ring the entire winter, except for a the shape of a V, 21 inces wide, havbrief period upon warm, sunshiny ing a long light handle.
