> For the Carolina Watchman. THE GAS QUESTION.

Messrs. Editors: The question is frequently asked why the Raleigh, Salisbury and Charlotte Gas Light mpanies cannot furnish gas as cheap as New York and Philadelphia Gas Companies. I propose to show that they do furnish a stronger gas as cheap, if not heaper. New York and Philadelphia use coal gas in the country some where. an average candle power of 14. Raleigh, Salisbury and Charlotte use rosin gas averaging 20 candle lower. The density of rosin gas is double that of oal, consequently coal gas will register double arough the same meter and burner under the same sure. The burners used in Raleigh, Salisbury and Charlotte were sent to New York in the past rosin gas with the following result:

New York Coal Gas. Raleigh Rosin Gas. 1% " " 10.7-10 1% " " 2 " " " 12,2-10 2 " " from 8-10 to 1 inch.

the price, as the larger the quantity to a certain ex opportunity to make them this recognition of lent the lower it can be produced. Take for comparison the amount of gas consumed, number of meters huse, and miles of street mains in Philadelphia. Consumption of gas per year 1338 millions feet.

Amount of gas consumed in Salisbury, 550,000 Number of meters..... 75 Miles of street main.....

It be seen by the foregoing statements that the coal gas registers under the same pressure more than Ouble the rosin gas. Consequently consumers pay more for it in a month or year than for the rosin gas. Add to the difference the 6 candle power excess and the disadvantage of selling a small quantity, and it ust be seen that gas is cheaper in Salisbury than

New York and Philadelphia.
