W. SMITHDEAL.

A SUCCESS AT LAST.

T. J. MERONEY, SALISBURY, N. C.

THIS MACHINE is a plain wooden tank lined with copper or galvanized iron, with perforated pipes in the bottom for the admission of steam, with corrugated Roller, made of same metal, and of sufficient weight. This Roller gathers the air while passing back and forth over the clothes, forcing air and water through the fabric. At same time the steam is thrown up through the perforated pipes underneath from the bottom of the tank. There are wooden strips between the pipes so as to protect them and form a smooth bottom in the tank.

The process is simple and easy. One can operate the machine. First, soap the clothes and distribute them evenly about four or five inches thick in the tank. Turn on enough water to cover them—turn on steam, and move the Roller back and forth until the water is colored. Turn the valve and let the water pass off. Add fresh water and repeat this three or four times, and you find the clothes are thoroughly washed without the slightest injury, for there is no rubbing process employed, the Roller having rounded edges so as to prevent any wear or cutting. A lace handkerchief can be washed as well as a bed quilt. This machine is in operation at Meroney & Bros. Machine Shop, where they will be manufactured at as small a cost as possible. Any one having a steam boiler in operation can use one of my machines at small cost and with satisfactory results. One person can do the work of ten wash-women in one day and do the work better.

It is a splendid thing for boiling grain and vegetables for stock.

It is also a good wool-washer.

State and County rights for sale by the Inventor.
