## A Favored People.

We are a favored people and ought man of him." to be duly grateful to Divine Providence and the Continental Congress for the many advantages we enjoy.

Look across the Atlantic, and what do we see? France fighting with China; England getting slaughtered in the Soudan; Turkey battling with the Arbanian insurgents; Egypt at war with the Mahdi; Rossians and Afghans facing each other with arms in their hands; Great Britian and Russia ready to fly at each other's throats; France under the shadow of Communism; Ireland sullen and angry; and everywhere the terrors of Nihilism and Dynamite threatening nations with destruction from the palace to the hovel.

Turning our eyes to this side of the ocean, what speciacles do they behold? Barrios bullying his neighbors; Mexico massing troops against Barrios; a revolt in Columbia, and Chili and Peru still with unsettled troubles.

Yet here we are in the United States laughing and growing fat crazy for roller skating, settling our strikes by conceding better pay for labor, looking confidently for business revival, reforming our Government, some of our follies, and dread ing nothing but cholera and tax tion. We are even prepared to dely these enemies-the one by cleanliness and sanitary skill and other by Lonest reduction of our ex, cases.

The only fighting we near of among our own people are the battles for the spoils, and, like all batties, they are of the picking, while ast for receiving described as terrible and destructive messages, the instrument does that only through the vivid imagination of war correspondents. Actually, they are very harmless skirmishers, fought of the system to-day at the company's in good temper and without fatal re- offices, No. 327 Warnut tree, the re sults. Only slight wounds are received and the wounded find consolation and comfort in the easy going ambulances of Civil Service Reform.

We recently cast a vote in a great Presidential battle which was a magnificent symbol of the strength and endurance of our republican government, Ten mi lions of freemen decided in the political destines of the nation for f.eemen so evenly divided in their op nions and wishes that only a smale didate. Yet the Government was peacefully transferred. In what other connery could so grand a speciacie be witnessed?

that citizen is an idiot who is not prepared to exclaim with sincerity, "Thank God, I am an American! -N. Y. World.

Good Work or None,

fore, but it will bear repeating every ing caused by their multiplicity. A

It is a rule that a workman must tollow his emylover's orders, but no one has a right to make him do work discreditable to himself. Judge M--, a well known jurist, living near Cincomati loves to teil this anecdote of a young man who understood the risk of doing a shabby job, even when directed to.

He had once an occasion to seed to the village for a carpenter, and a sturdy young tellow appeared with

"I want this fence mended to keep out the cattle. There are some unplaned boards -use them. It is out of sight of the house, so you need not rake time to make it a neat job. will pay you a dollar and a bad."

coming out, found the man carefully planing each board. Supposing that ne was trying to make a costry job of it, he ordered num to nail them on at receiver, so that errors are avoided, once, just as they were, and cominged his wark. When he returned, the boards were all planed and numbered instrument can of be read by sound, ready for nailing.

"I told you this fence was to be the privacy often desirable in business covered with vines," he said, angrity; "I do not care how it look."

"I do," said the carpenter, gruffly, carefully measuring his work. When he had finished there was no part of the fence as toorongo to finiso.

"How much do you charge?" asked the junge. ' A donar and a half," said the man,

shouldering his tools. The judge started. "Why did you spend all that labor on the job, if not for money ?"

"For the job, sir." "Nobony would nave seen the poer

work on it," "But I should have known it was there. No; I'll take only a dollar and a half." And he took it and went

said. "I knew we should have only of each other,

good, genuine work from him. I gave him the contract, and it made a rich

## An Astonishing Invention.

It Threatens to Supersede Both th Morse System and the Telephone.

A Philadelphia special says: An invention has recently been perfected here that bids fair to revolutionize all existing systems of electric communication, both thelegraphic and telephonie. The secret of it has been carefully guarded by the inventors, Messrs. Geo. M. Hathaway and Jas. H. Linville, and by the small company of large capitalists who controlled it while it was being fully covered by patents, both American and foreign. Now that all is secure, it is to be suddenly sprung upon the public by an exhibition at the Continental Hotel, one of the gogantic scientific surprises of the century. To state in brief what it is, it is nothing less than making within t e command of everybody as cure, \$1. is the operating of the caligraph or type writer. Effecting what is claimed for it, it will be the means of great ly reducing the cost of telegraphy, of

enabling the opening of some 40,000 new telegraph at tions is rationed and express offices throughout the United States where there have hitherto been o , and of taking the place generally or the telephone Any person who can pick out a word on the keys of a type-writer can transant a message by the Hathaway system accurately and rapidly, only restricted by the speed automatically, whether there is anybody superintending its operations or not. There was a private exhibition sults attained at which seemed to fully sustain all that is claumed for this

most remarkable invention. The instrument used is both a transmitter and receiver. The two is go ments u ed in this exabilities were this Dyn. It imparts a natural color. Instantaneously. Sold by Druggists, sent by expression receipt of C1.

Office, 44 Murray St., Poss. connected by about 100 miles of wire coiled about the offices. E ea appeared in its front pare to be stupiy an ordinary type-writer, with the letters, umerais, etc., on raised keys. a day, intelligently and peacefully, Benind this rises a small column with bank paper wrapped around it and four years to come-ten millions of moved up line by time as required by a simple device. In-ide that e dumn that strikes outwardly, so as to, whenever a key is touched, press the paper plurality of the popular vote was against the periphery of a horizontal lound on the side of the winning can- wheel that hes between the board and the column. On that periphery, in high relief, are the letters f the alphabet, numerals, and points for punctuation. The wheel spins around with lightning like rapidity as the Yes, we are a favored people, and keys are successively touched by an expert. When it has to retrocede in the alphabetical order it fles back to a fixed point, as does the wheel of a gold and stock indicator, but much more swiftly. All the delicate and intricate electrical attachments necessary are below, and, when understood, are much less complicated than they We have published this story be- seem, their apparent complication beseparate wire leads from each key to a single common wire, and each of those key connected wires serves either for transmission or reception of

messages. The sending or receiving any particular letter or figure is governed by the strength of current required for that individual oue, and for no other. It seems very strange that all those various impuls a should be flashed along a wire—even in opposite directions at the same timewithout jostling each other or getting mixed up, but they do. Many messages were sent and received in today's tests by non-experts at a speed of from forty to fifty words per minute with greater accuracy than is usu ally shown by Morse "sound" operators, and that speed, it was affirmed, The judge went to dioner, and could be greatly increased. A not cetem is that it prints clearly in the sight of the person transmitting a message just what is being seat to the or, if committed, are readily corrected. The messages sent over a wire by this so that it is much more favorable to than either the Morse system or the telephone. Loasauch as the Hathaway system can be adjusted to any system of wire comm muca ion and will work to as great distance as is required in telegraphy, it will be of mestimable value to railroad and express companies, bankers, brokers, merchants and the general public. There are no formidable complications in its construction, and expert electricians who have examined it pronounce it one of the most wonderful achievements of the age. Should it only do half what is claimed for it, and that it shows it can do, it would practically revolutionize telegraphy.
