Sam Christian Mine.

At the Sam Christian mine in Montgomery county, they have about completed the setting of their new machinery. Some of it is in running order. A test made recently shows that the "Progressive Placer Amalgamator," which saves gold by amalgamation and gravitation. will, in all probability, prove to be just what has been needed at this famous old mine. Four-fifths of the gold saved in this experiment was "float gold," that is, gold which exists in the most minute particles, so small and thin as to be liable to They will repair all kinds of light be carried off by water. All of this float gold has been lost in the past, as ordinary amalgamation or sluicing failed to save it. This process must become popular in Montgomery, where there is so much of this character of gold.

General Notes.

Mr. W. A. Weaber, interested in the New Discovery mining property, is here

Some Colorado miners are at work on the Powe lands, near Morganton, in Burke county. They are washing surface grit, and are reported as making wages.

There is a very general inquiry about mines, or rather, more than the usual number of prospectors are pursuing their investigations, and among them, two or three parties are looking up possibilities, Some evidently mean business, while others are of the old-fashioned speculative class. The latter are great

pests and exercise an influence hurtful to the whole industry and injurious to ligitimate schemes. The Baltimore and North Carolina, or as it is more familiarly known, the old Ray mine, in Mecklenburg county, is A. L. March 15th 1886. HOW TO SAVE GOLD

TRIPLER AMALGAMATOR!

This machine is a combination of silver plates so as to represent a large amalgamating surface, working with rapidity and efficacy, which has not hitherto been secomplished. The drawing above represents the machine in working position. It consists of four corrugated p'ates fitted together, allowing a space between of inch. Two plates are perpendicular, connecting with two horizontally inclined. The pulp passes from the battery and falls perpendicularly through the plates, which gives it a zigzag motion, causing the free gold to impine on each side, when it passes through the horozontally inclined plates, which act as riffles, catching any escaped gold both on top and bottom. The plates discharge in a circular pan at the end which is given a rotary motion, thus concentrating the heavier portion of the tailings for subsequent treatment if necessary. At the top of the machine is a mercury cup which feeds automatically

any required mercury to keep the plates in active force. This machine is especially adapted for placer mines. It can be worked with or without water; it requires no mill for pulverization, it only being necessary to sift the JUBA non JI sand, which can be done at a triffing cost, so that low grade ore can be worked profitably. This machine has been practically tested and is now on the Herring mine, Randolph county, where it met with such success as to warmut the belief that it will

be of great value to the mining interest of this State. This machine has an electrical attachment by which the mercury, should it be sickened by the various causes to which it is liable, can be instantly restored to activity, Inspection is invited. Estimates given for the erection of this machine on placer and other mines; also for all other Mining Machinery by the undersigned.

A. B. TRIPLER. Hannerville, Randolph County, N. C., Or to THE TRIPLER AMALGAMATOR & MANUFACTURING CO., of New York: BENJAMIN LEWIS, See'y and Treas., 181 Montague St., Brocklyn, N. Y.
