Appalachian Mine.

Speaking of stamps and reduction reminds one of the many processes now Carolina seems to be a favored spot for testing these new fangled appliances. There are amalgamators, ore reducers, concentrators and gold savers. Among the latest is a mill for saving free gold in placer grit and surface dirt. It is claimed for it that it will absolutely clean the material of all its golden treasure. As a test they sometimes count out as many as 60 or 75 particles of placer gold of all sizes, mix them with a half bushel of grit and earth, run it through the mill and count them out again, all saved. That is a wonderful performance for a machine and it ought to find ready sale. People who have had experience seem to be very

ly wear a lonesome look. TO QUARRY SLATE. A slate quarry, near Webster, N. C., has recently changed hands, and it is understood that the material is to be quarried and manufactured on the spot. The Cassidy Oil Company are the purchasers. EXPOSE THE FRAUDS.

careful in taking hold of processes, so

Those who are at heart deeply interested in the future of mining in the South often have occasion for regretting that certain questionabl transactions are conducted. Designing persons may easily deceive even an honest expert, who comes for a day or two to look into the merits of some hole in the ground. When we see a place being "rushed," that is when there is great show on the surface in buildings and in machinery, before the Manufacturer's of Mining Mamine can be said to exist, save as a surface outcrop, then it is but fair to pre- chinery of all kinds, also Masume that either those who are managing chinery for the treatment of the place are densely ignorant or that they are wilfully perpetrating fraud. In either case the wise man will let it alone.
