Scientific Miscellany.

ANGLO-INDIAN ENTERPRISE.
Mahogany is being rapidly introduced into every part of India where it promises to thrive. The seeds sown have germinated remarkably well, a single pound planted in green-houses in the southern districts having yielded between 3,000 and 4,000 plants. It is thought to be quite probable that the world may some day look to India instead of to America for its mahogany as well as for its quinine. The eastern product of the latter has already become so extensive and of such superior quality that the chinchona bark exports of the United States of Columbia are said to have diminished fifty per cent within five years.

THE LEFT-HANDED.
A new work by Dr. Louis Jobert, states that no purely left-handed race has ever been discovered, although seventy per cent of the inhabitants of the Pundjab use the left hand by preference, as do also the larger part of the Hottentots and Bushmen of South Africa. In a study of criminals, Dr. Marro has found that from fourteen to twenty-two per cent of convicts were left handed, the highest ratio among people of all classes being only nine in the hundred.

Dyspepsia palpitation of the heart and nervousness are among the disorders attributed to the use of strong tea in excess, but the most remarkable effect seems to have been observed in the case of a young girl reported by an English medical authority to have had attacks exactly resembling delirium tremens as a result of a habit of chewing tea-leaves.

France is credited with having 2000 medicines in its Pharmacopoeia; Spain and Belgium, 1500; Russia, 1080; Greece and Switzerland, 1040; United States, 1010; Great Britain, 815; Sweden, 740; Denmark, 720; Holland, 665; Germany, 606; Austria, 560; Hungary and Romania, 545; and Norway, 530.

A communication to the French Academy of Sciences, by Mons. C. V. Zenger, has called attention to the simultaneous occurrence of brilliant auroras and meteoric showers, suggesting a probable connection.

THE UNEXPLAINED IN GEOLOGY.
While reaching so deeply into the origin of things, reflects Dana, geology leaves wholly unexplained the creation of matter, pervades the whole history like a prophesy, becoming more and more clearly pronounced with the progressing ages, and having its consummation and fulfillment in Man. It gives no cause for the arrangement of the continents together in one hemisphere, and mainly in the same temperate zone, or their situation about the narrow Atlantic, with the barrier-mountains in the remote west of America and in the remote east of Europe and Asia, thus gathering the civilized world into one vast arena; it does not account for the oceans having in extent and depth, that exact relation to the land which, under all the changes, allowed of submergence and emergence through small oscillations of the crust, and hence permitted the spreading out of sandstones and shales by the waves and currents, the building up of limestones through animal life, and the accumulation of coal-beds through the growth of plants,—and all in numberless alterations; nor for the various adaptations of the system of plants and animals to the want of the last species in that system. Through the whole history of the globe there was a shaping, provisioning, and exalting of the earth with reference to a being of mind, to be sustained, educated, exalted. This is the spiritual element in geological history, for which attraction, water and fire have no explanation.

THEORY OF SUN SPOTS.
By means of a sensitive thermopile and a perforated disc of cardboard, Prof. Sporer, a German physicist, has proven that extra-luminous patches on the solar disc are more intensely heated than the rest, and that the dark spots are cooler than the average surface. The hottest regions must develop ascending gas-currents, to which descents of cooler gas-masses must necessarily correspond. These descending gases must generate the dark spots, and the ascending produce the prominences which are observed to shoot up to enormous heights. This theory is confirmed by the fact that sunspots always form on extra-bright parts of the sun.

Recent observations suggest that perfumes and the odors of flowers operate powerfully in preventing lung diseases.

MICROBES.
The part played by microbes in nature, as Mons. E. L. Trouessart says, is an important one. We find them everywhere. Every species of plant has its special parasites, the vine, for example, being attacked by more than a hundred different kinds. These microscopic fungi have their use in the general economy of Nature. They are nourished at the expense of all decaying vegetable and animal matter, whose complex constituents they reduce to the simpler form of soluble mineral substances, which are returned to the soil to feed new generations of plants. In this way they clear away all the dead bodies and useless substances which are the refuse of life, and thus they unite animals and plants in an endless chain. All our fermented liquors, wine, beer, vinegar, etc., are artificially produced by the species of microbes called ferments, which also cause bread to rise. From this point of view they are profitable in industry and commerce. But, in addition to these useful microbes, there are others which are injurious to us. Such are the microbes that produce diseases in wine, most of the changes in aliment-

ary and industrial substances, and, finally, a large number of the diseases to which men and domestic animals are subject. The germs of these diseases, which are only the spores or seeds of these microbes, float in the air we breathe and in the water we drink, and thus penetrate to our bodies' interior. There is not a single day, nor a single instant, in which we cannot be said to be in contact with microbes, which are, in fact, the invisible agent of life and death.

FIRE PROOF RUBBER.
A new compound of caoutchouc, for which the name of "Woodite" is suggested, has been produced by Mrs. A. M. Wood, an English lady. The substance possesses the elasticity of India-rubber, undergoes no change by exposure, and is claimed to be absolutely unflammable. It is proposed to use it for covering the unarmored parts of war-ships and torpedo boats.

A French horticulturist, Mons. Noble, has found that the seeds of the finest varieties of grapes germinate more quickly than those of the common sorts, and that seeds fresh from the fruit germinate better than those which have been dried.

Esther Rockwell's Romance.
Mrs. Esther Niles Rockwell, widow of Harry Rockwell, died at Haddam Neck, Conn., a few days ago. A most romantic event in her life gave her something more than mere local reputation. She was married in 1817 to Harry Rockwell, who lived further up the Connecticut river, and who was a man of somewhat roving disposition, with a strong liking for sea. Two years after marriage Rockwell accepted an offer for winter employment in Savannah, but when he returned in the spring came only to New York. There he was tempted to ship on whaler, and did so without seeing his wife. He was afterward captured while on an English vessel by a Spanish ship and spent two or three years in a Spanish prison. Then without returning home, he enlisted in the United States navy, and for some years after was on a merchant ship. He sailed around the world several times. Mrs. Rockwell, not having heard anything from him for seven or eight years, believed he was dead, and in 1825 she married George Evans, who died in 1831. Rockwell in that year was in New York, and intended to return home, but hearing that his wife had married again thinking him dead, he at once shipped for a long voyage. By Mr. Evans the wife had three children, two of whom are now living. One of these, Zelinda, when a little girl, in 1835, told her mother that she had a queer dream, and that she saw her other papa as Rockwell was called coming home in sailor clothes and a colored vest. A week later, on the afternoon of July 4, and during a heavy thunder storm, Rockwell knocked at the door of his wife's house and asked for shelter. He was invited to take dinner, though no one recognized him. The little girl, however, spoke of her dream at once when she saw him, saying that the man was dressed just as her other papa had been. Then the wife said, greatly agitated: "You remind me of a man who was once my husband." "Don't you know me, Esther?" was his answer. Five days after they were married, and lived happily together for forty-six years, when Rockwell died. Three children were born to them, one of whom, Edward Rockwell lives now in the old homestead.

They Still Howl.
Memphis Appeal.
Massachusetts is still Republican. The reason why is very plain. Over 1,500 persons in that State have been arrested for illegal voting in the late elections. In New Jersey a Republican secured his election to the Legislature by purchasing 400 votes, the Federal authorities having secured the confessions of that number of persons that they had sold their votes. And yet they will howl about Mississippi and Louisiana.
