

The Carolina Watchman.

VOL. XIX.—THIRD SERIES.

SALISBURY N. C., THURSDAY, OCTOBER 27, 1897.

NO. 1.

G. M. D.

Thoroughly cleanse the blood, which is the fountain of health, by using Dr. Pierce's Golden Medical Discovery, and good digestion, a fair skin, buoyant spirits, vital strength, and soundness of constitution will be established. From the common pimples, blotch, or eruption, to the worst scrofula, or blood-poison. Eczema, Scrofulous Sores and Swellings, Enlarged Glands, and Eating Ulcers. Golden Medical Discovery cures Consumption which is Scrofula of the Lungs, by its wonderful blood-purifying, invigorating, and nutritive properties. For Weak Lungs, Spitting of Blood, Shortness of Breath, Bronchitis, Hoarseness, Coughs, Asthma, and kindred affections. It is a sovereign remedy. It promptly cures the severest Constipation. For Torpid Liver, Biliousness, or "Liver Complaint," Dyspepsia, and Indigestion, it is an unequalled remedy. Sold by druggists. **DR. PIERCE'S PLETT'S Anti-Bilious and Cathartic.** See a vial by druggists.

LEDMONT WAGON

MADE AT HICKORY, N. C.

CAN'T BE BEAT!

The stand where they ought to fight square

AT THE FRONT!

Hard Fight But They Have Won It!

Just read what people say about them and if you want a wagon come quickly and buy one either for cash or on time.

SALISBURY, N. C.
Sept. 1st, 1886.
Two years ago I bought a very light two-wheel Piedmont wagon of the Agent, J. M. Turner. I have used it nearly all the time and have tried it severely in hauling sugar and other heavy loads, and have not had to buy one cent for repairs. I look upon the Piedmont wagon as the best "three-wheel wagon" made in the United States. It has never had a firm in most excellent thoroughly well seasoned.

SALISBURY, N. C.
Aug. 27th, 1886.
About two years ago I bought a very light two-wheel Piedmont wagon which was a fine machine and I no part of it broken or given away and consequent it cost nothing for repairs.

SALISBURY, N. C.
Sept. 31, 1886.
Eighteen months ago I bought of John Borden, a 2 1/2 inch Thimble Skin Piedmont wagon and have used it pretty much all the time and it has proved to be a first class wagon. Nothing about it has given away and therefore it has required no repairs.

SALISBURY, N. C.
Sept. 8th, 1886.
18 months ago I bought of the Agent, in Salisbury, a 2 1/2 inch Thimble Skin Piedmont wagon—their lightest one-horse wagon—I have kept it in almost constant use and using the time I have hauled on it at least 5 loads of wood and that without any breakage or repairs.

FOR SALE.
One Brick House and lot, on the corner of Fulton and Kerr streets, about one acre in lot.
One Frame House and lot on Lee street.
One Frame House and lot on Main street.
Also shares in N. C. R. R.
Enquire of Mrs. H. E. and Miss Victoria Johnson at their home on Main street. 4014

WORM CURE. I can furnish carpenter's work—large or small, in any quantity. For terms, address W. R. FRALEY, Salisbury, N. C.

WEAK UNDEVELOPED

OF THE GENITALS AND URINARY ORGANS. This is a common complaint among young men, and is the result of various causes, such as over-exercising, over-eating, or using stimulants. It is characterized by a feeling of weakness, aching in the back, and a general debility. It is cured by the use of the **WATERBURY'S** **GENITAL PASTILLES**, which are a purely vegetable preparation, and do not contain any harmful ingredients. They are sold by all druggists.

ROUGHENOUR & SHAWER.

DEALERS IN FRESH MEAT AND ICE.

Italy has entered into an alliance with Austria and Germany on an equal footing with the two Empires.

The Canadian Government forbids importation of rags from the Mediterranean on account of cholera.

Savannah, Ga., is protesting against the site selected for the new government building to be erected in that city.

James Henry, great grandson of the famous Patrick Henry, is one of the promising young men of Tennessee.

An insurance company employed a detective to get evidence of a fraud against a firm making an insurance claim, and the firm had the detective arrested on the charge of conspiracy.

Nina Van Zandt is aggrieved because her husband by proxy, spies, insists on writing love letters to another woman. This is the reward she has for giving up everything else in her infatuation for the condemned anarchist.

A beautiful young girl in Ohio was walking through an electric light establishment and received a severe shock, which turned her hair gray and made an old woman in appearance of her. She was engaged to be married at the time.

A citizen of Cincinnati went off to Europe and left four gas jets blazing away in his house for four months. He has offered the gas company \$500,000 to settle the bill, but they want an even million and he will probably have to pay it.

A Pittsfield (Ill.) man has manufactured an immense barrel churn on wheels. With this he will go through the country gathering the cream, and when he has secured the proper quantity return home. He will hitch on the churning gear, and as he drives along the churning will go on as the wagon goes along, and when he arrives there will be nothing to do but take out the butter and draw off the buttermilk.

Bill Nye writes the President's Asheville Speech for Him.

Bill Nye wrote the following speech for the President to deliver to Asheville:

Fellow-Citizens of Asheville and Buncombe County, and Brother Tarheels from Away Back:

If I were a faithful Mohammedan and believed that I could never enter heaven but once I would look upon Buncombe county and despair ever afterwards. (Four minutes for applause a loud noise.) Asheville is 2,300 feet above tide-water. She is the hotbed of the invalid and the home of the physical wreck who cannot live elsewhere, but who comes here and lives till he gets plum sick of it. Your mountain breezes and your fried chicken let it strength and healing in their wings. (Hold valve open two minutes and a half to give laughter full scope.) Your altitude and your butter are both high, and the man who cannot get all the fresh air he wants on your mountains will do well to rent one of your cottages and allow the wind to meander through his whiskers. Asheville is a beautiful spot, where a peri could put in a highly enjoyable summer, picnicking along the Swannanoa through the day and conversing with Plum Levy at his blood-curdling barber shop in the gloaming. Nothing can possibly be thriffler than to hear Plum tell of the hair-breadth escapes his customers have had in his cosy little shop.

The annual rainfall here is 40.2 inches, while smoking tobacco and horned cattle both do well. Ten miles away stretches Alexander's. You are a only thirty-five miles from Buck Forest. Pisgah Mountain is only twenty miles from here and Tahkeeste Farm is only a mile away, with its name extending on beyond as far as the eye can reach. The French Broad river bathes your feet on the right and the sun-kissed Swannanoa, with its beautiful borders of rhododendrons, slashes up against you on the other side. Mount Mitchell with an altitude of 6,711 feet and an annual rainfall of 53.8 inches, is but twenty miles distant, while Lower Hominy is near, and Hell's Half Acre, Sandy Mush and Blue Ruin are within your grasp.

The sun never lit up a enter little

town than Asheville. Nature just seemed to wear herself out on Buncombe county and then she took what she had left over to make the rest of the country. Your air is full of vigor. Your farms get up and bump themselves in the middle or on one side, so that you have to wear a pair of telegraph-pole climbers when you dig your potatoes. Here you will see the japonica, the jonquil and the jaundice growing side by side in the spring, and at the cheese fountry you can hear the skipper calling to its mate.

Here is the home of Gen. Tom Clingman, who first originated the idea of using tobacco externally for burns, scalds, ringworm, spavin, pneumonia, Bright's disease, poll evil, pip, garget, heartburn, earache and financial stringency. Here Randolph & Hunt can do your job printing for you and the Citizen and the Advance will give you the news.

You are on a good line of railroad and I like your air very much, aside from the air just played by your home band. Certainly you have here the making of a great city. You have pure air enough here for a city four times your present size, and although I have seen most all the Switzerland of America I think that this is in every way preferable. People who are in search of a Switzerland of America that can be relied upon will do well to try your town.

And now, having touched upon everything of national importance that I can think of, I will close by telling you a little anecdote which will perhaps illustrate my position better than I could do it in any other way. (Here he inserts a humorous anecdote which has no special bearing on the political situation, and during the ensuing laughter the train pulls out.)

New Terrors in War.
A party of scientists from New York city went to La Fayette recently to witness experiments which Lieut. E. L. Zinski conducted with the pneumatic dynamite gun. The Secretary of the Navy and members of the Ordnance Committee watched the experiments from the U. S. steamer Despatch. The target for practice was the old coast survey sailing vessel Siliman, which had outlived its usefulness. The Siliman was placed 1,980 yards, 11 miles from the fort. After two trial shots, without dynamite cartridges, to fit the range, a charge containing fifty-five pounds of explosive gelatine and dynamite was fired, and a jet of water rose around the place where the Siliman was to the height of about sixty feet. The damage to the target consisted of serious injury to her woodwork, and considerable water was let into her hold and thrown on her deck. One of the masts was gone also, and the ship was in a wrecked condition.

The four shot made a terrific noise as it exploded, and the spray this time was blackened with smoke and interlarded with spars and small pieces of wood. When this had fallen one glance showed that the work had been done. The Siliman was no more. A mast stuck plumply in the water; the remainder of the vessel had sunk. Pieces floated around everywhere. The projectile, also containing 55 pounds of dynamite and gelatine, struck directly under the middle of the hull, and lifted it bodily from the water. The Siliman's water tank was carried from the hold up through the deck and rested on the top of the wreckage.

Two more shots were fired at the diminished parts of the boat. The fifth shot struck the wreckage that was sticking up in the water and cleared away a large amount of debris, making a loud noise. The sixth shot was simply to show that the projectile could hit exactly the same spot it had previously touched. It would have struck the Siliman in the same place that the third shot struck if the ruined vessel had not drifted twenty yards down the bay. As it was it exploded under the water astern of the wreck.

In the first four shots 600 pounds air pressure was used, and, though successful, they fell short of the calculated point. In the last two shots 607 pounds pressure was used, which would have sent the projectiles right into the center of the vessel. Every one of the projectiles would have landed on the deck of an ordinary sized vessel. The success of the experiments was acknowledged by all witnesses.

How to be a "Nobody."

It is easy to be nobody, and the Watchman tells how to do it. Go to the drinking saloon to spend your leisure time. You need not drink much now, just a little beer or some other drink. In the meantime, play dominoes, checkers, or something else to kill time, so that you will be sure not to read any useful books. If you read anything, let it be the dime novel of the day. Thus, go on keeping your stomach full and your head empty, and yourself playing time-killing games, and in a few years you will be a first-class nobody, unless you should turn out a drunkard or a professional gambler, either of which is worse than nobody. There are any number of young men hanging about saloons just ready to graduate and be nobodies.

If all so-called remedies have failed, Dr. Fage's Catarrh Remedy cures.

Don't Leave the Old North State.

[Rev. P. F. W. Stamey in Newton Enterprise.]

A young man, with a wife and two children left Rowan county for Texas early last fall—left a comfortable little home—so d off everything he possessed, went to Texas to make a fortune, and in a short time after getting there buried all his children, and returned to North Carolina to begin life anew. And this is only one case among hundreds who meet with a similar fate.

As a rule all who go to the West and succeed would do just as well here, if they would put forth the same energies here as there. Our young men by hundreds are going to Texas, and thousands of acres of land in Western North Carolina yet uncultivated, rich in products, rich in minerals and timber, and an atmosphere as pure as heaven can give, and water as cool in August as if it had just dropped from an iceberg, and where fevers scarcely ever score, or chills ever shake, and yet they leave all these blessings and conveniences, and go where many of them lose their health, and their lives, and others return poorer financially than before they left. Unless a man has plenty of brains or capital, or has good business qualities, he would do better to stay among the hills of Western North Carolina, than go west to make a fortune by manual labor.

Selecting a Cow.

A model useful dairy cow may be known at a glance by an expert. She has a fine, long head, broad between the eyes, and a thin, wide muzzle; the eyes are large, and of a mild expression; the neck is thin and long; the ears are thin, and covered within with a deep yellow skin; the fore udders are light and thin, and the whole body has much the shape of a wedge, increasing in size to the rear; the legs are thin, with fine bone; the belly is large and deep, with great capacity for food; the back is broad and straight, and the ribs are well rounded toward the rear; the bones of the rump are wide apart; the tail is long and thin; the thighs are thin and are set widely apart; the udder is large and full, especially behind; the teats are of good size, and set far apart upon a broad, level udder, and the milk vein, so called, which is the large vein leading from the udder and passing into the abdomen, and which is an indication of the amount of blood circulating through the milk glands, and contributing to the milk secretion, should be full and tortuous in its short course. A fine horn, a deep yellow skin, and a general elegance of form, without any heaviness or blemishes in any part, are also important indications of good quality in a cow for the dairy.—*American Agriculturist.*

To the Point.

Just at this time our country needs a religion that will make a man pay his debts. Shouting doesn't settle old notes and accounts with God and man—cash up. We want to pounce right on a man and put him out of the church if he goes to a ball or theatre, or gets drunk, but never say a word to the pious scamp who never pays his debts. Preachers and people who never pay their debts are doing more harm than dancers and drunkards—there are more of them in the church. Reader am I getting close to you? Then lay down this paper and go and pay up, and then you can read with ease. And don't you stop paying because the open access of limitation excuses the open access you made for meat and bread. God's law knows no such statute. You pay in cash or God will make you pay in fire and brimstone. God knows no such excuse for paying as the 'homestead exemption. You raise that excuse to keep from paying your debts and you can stop singing 'When I can read my titles clear to mansion in the skies—you have none up there.—*Rev. J. H. Tuttle, of Wilminon.*

How to Avoid Premature Old Age.

The following advice is given by Dr. Benjamin Ward Richardson:

To subsist on light but nutritious diet, with milk and the standard food, but varied according to the season.

To take food in moderate quantity four times a day, including a light meal before going to bed.

To clothe warmly but lightly; so that the body may, in all seasons, maintain its equal temperature.

To keep the body in fair exercise and the mind active and cheerful.

To maintain an interest in what is going on in the world, and to take in reasonable labors and pleasures, as though old age was not present.

To take plenty of sleep during sleeping hours. To spend nine hours in bed at least, and to take care during cold weather that the temperature of the bed room is maintained at 60 degrees Fahrenheit.

To avoid passion, excitement and luxury.

To conceal a fault by a lie has been said to be substituting a hole for a stain.

Envy is a passion so full of cowardice and shame, that none have the confidence to own it.

Toad and Grasshopper.

I once saw an amusing instance of the process of rannam a grasshopper down his throat in the case of a young toad (scarcely more, I think, than fifteen months old), which I saw upon a smooth gravel yard in front of my barn. I saw that the little fellow would have no clod or stone handy to push the grasshopper down with, and I went to my garden and found one of the yellow striped locusts which seemed to be fully as long as the toad itself. Crossing the locust's legs over each other in such a wise that it would take him some seconds to untangle them and get ready for a hop, I threw him cautiously in front of the toad. Before the locust could recover his self-possession and get his hind legs ready for a jump the toad had put his head foremost down his throat, leaving nearly half his length protruding from his mouth. The fellow then looked about, turning in every direction, and seeing nothing against which he could push the locust, he bent his head down against the ground. But his legs were so short and the locust was so long that it made a small angle, and it slipped along, making simply a furrow in the surface of the gravel. The toad then raised his hind legs higher in order to increase the angle, but still in vain. At last, in his desperate effort to get his legs still higher, he threw himself up and actually stood upon his head, or rather upon the hind legs of the grasshopper sticking out of his mouth; he repeated this operation several times before he succeeded in getting the insect fully within his mouth.—*Gentleman's Magazine.*

How Chocolate is Made.

"Chocolate," said a confectioner, "is made from beans that grow in pods on the cacao tree. These trees are numerous in the West Indies, and it is from there we get our supply. The beans are brought hither in the pod and put through a regular manufacturing process to produce the chocolate cakes that we use. The first operation is the breaking of the husks and separating them from the kernels by a blast of air. Then the beans are ground with sugar by revolving granite grindstones. The stones are heated, and the oil contained in the bean makes the mass adhere and become a thick paste. This pulp is now partly dried and the air bubbles are squeezed out in a press, and it is transferred to the cooling tables. Here it is beaten and worked by hand to produce an even texture and a fine grain. Then it is placed in molds, a blast of cold air is turned on, and in a few moments the beautiful glossy tablets are finished.

"The British Government has recently directed that the chocolate be served two or three times a week in their army and navy. In confectionary the Parisians exceed us in the number of preparations of chocolate. We use it in its natural flavor only, while they mix essences and other flavors with it until there is no end to the combinations they produce. In England much of the chocolate is adulterated. Some recent tests detected flour, starch, potato, lard, chalk, bran and old sea-biscuit in specimens offered for sale."

A Kind Voice.

There is no power of love so hard to get and keep as a kind voice. A kind hand is deaf and dumb. It may be rough in flesh and blood, yet do the work of a soft heart and do it with a soft touch. But there is no one thing that love so much needs as a sweet voice to tell what it means and feels; and it is hard to get and keep it in the right tone. One must start in youth, and be on the watch night and day, at work and play, to get and keep a voice that shall speak at all times the thoughts of a kind heart. It is often in youth that one gets a voice or a tone that is sharp, and sticks to him through life, and stirs up ill will and grief, and falls like a drop of gall on the sweet joys of home. Watch it day by day as a pearl of great price; for it will be worth more to you in days to come than the best pearl hid in the sea. A kind voice is to the heart what light is to the eye. It is a light that sings as well as shines.—*Elihu Burritt.*

Why Not Keep Bees?

"It has always been a question to our mind," says the Farm and Home, "Why there are so many homes without bees. There is no diet more delicious or healthful than honey. It is within the reach of every one. There is not a housewife in this broad land who does not feel a touch of pride and satisfaction when she can place before her guests a dish of nice honey. The friends somehow feel that they have been especially favored and reassured of a hearty welcome. It is far superior to the doctored store molasses or sorghum, and can be had for less cost or labor. Your wife will have to pay more attention and bestow more labor in raising a brood of chickens than will be required for several colonies of bees.

The bank of England was established in 1694, and is banker to the government, receiving all taxes, and paying all dividends and outgoings for public offices.
