T. K. BRUNER EDITOR, RALEIGH, N. C.

Geld Hill.

Mr. Frank Mauney, Supt., reports having sent 46 oz. of fluxed gold to England this week, the result of two week's work at Gold Hill Mine in March. Good ore is being taken from the 270 foot level North, but only a small force is at work. We would like to see Gold Hill working again with the push and energy that was once shown at this mine.

Continuation of the list of North Caroina minerals and their localities:

II. TERNARY OXYGEN COMPOUNDS.

1. SILICATES. A. ANHYDROUS SILICATES. 67. ENSTATITE.

Forms beds at the corundum mine of Culsagee, in Macon county, in coarsly crystalline masses of a brownish-grey yellowish color; and in Jackson, Yancey and Mitchell.

Dark brownish-black and black pyroxene is one of the constant constituents of the numerous "trap" rocks found in

68. PYROXENE.

North Carolina. 69. SPODUMENE.

The mineral found at J. W. Warren's Alexander county, and heretofore retained by Dr. J. L. Smith to be a new variety of Spodumene. He says: "It is its beautiful color (emerald green) entitles it to a new name." He afterwards called it Hiddenite, after Mr. Hidden,

70. AMPHIBOLE.

Amphibole is represented in North Carolina by numerous varieties. We find white and gray tremolite, associated with talc, in Cherokee, Jackson, Macon, Mitchell, Yancey, Madison, and Ashe; grammatite occurs in Jackson; anthophyllite occurs in Macon; actinolite has been observed in tale in Iredell, Clay, have a very good teacher and think he Jackson, Yancey, Mitchell, and other Asbestos has been found in Jackson, Macon, Caldwell, Rockingham, Franklin, Wilkes, Yancey, Mitchell, and Alexander, Black and greenish black hornblende is abundant throughout the State in the hornblende slates, hornblende rocks, syenite and diorite.

Still a few peaches left, and prospect 71. SMARAGDITE (?) KOKSCHAROWITF. A beautiful mineral, which may be a Eggs of all kinds and colors in great Cullakenee mine, Clay county. It has a variety of hornblende, occurs at the abundance. Every little urchin black or bright color between emerald and grass green, gradually passing into greenish gray. Sp. gr. of the grass-green variety, Mr. J. S. Miller started to Concord a 3.120. It is associated with pink and few days ago loaded with about 20 pigs ruby corundum and a feldspathic mineral.

72. ARFVEDSONITE, A black-brownish or greenish-black Cabarrus with pigs why not do it at once. hornblende, like mineral, is found asso-Hawks have been slipping around and rundum of Clay county, and rarely in fore arfyedsonite.

73. CROCIDOLITE (?),

Found in six-sided prisms, sometimes house on the Gold Hill road. We do doubly terminated, from about half an not know whether any thing has been inch to four inches in thickness, and broken or not, and at last account the from one to eight inches in length; pieces of the latter sometimes, transpar-We had the pleasure of spending a ent enough to be cut for gems (acquamarine), associated with orthoclase, muscothe finest emeralds are found.

72. CHRYSOLITE.

This is one of the most interesting through the fine-grained mass; associa-Gold Hill is a lively place and has some ted with chromite, enstatite, actinolite, tremolite, asbestos, tale, chromite and corundum, and found in Macon, Haywood, Jackson, Yancey, Mitchell, Clay, subject to extensive alterations, forming Four and one-half miles from Gold Hill associates.
