Continuation of the list of North Caro-

ina minerals and their localities : H. TERNARY OXYGEN COMPOUNDS. I. SILICATES. A. ANHYDROUS SILICATES.

76. GARNET.

Widely distributed through the State and a constant constituent of many of the mica and hornblende slates, in which it occurs in minute crystals dodecahedral and trapezohedral crystals of a brownish or brownish red color; it also occurs in many of the talcose and chleritic slates larger trapezohedral crystals of a brownish red color are frequently met with in the mica mines of Mitchell and Yancey counties; imperfect dodecahed al crystals in Rutherford, and in talcose slate, in Rockingham, Cherokee, Madison, Surry, and many other counties. The most

Pyrope, of good color has been observed in the sands from gold washings in Burke, McDowell and Warren counties. The massive manganese garnet or spes sartite, is abundant in Rutherford, Chatham, Stokes, Cabarrus, Lincoln, Gaston, Guilford, Macon, McDowell, Mitchell, Rutherford and Surry.

beautiful and perfect crystals are large

trapezohedra, of a brownish red color

from Burke, Caldwell and Catawba

77. ZIRCON. Abundant with the gold sand of Burke. McDowell, Polk, Rutherford, Calawell Mecklenburg, Nash, Warren, and other counties, in very minute vellowish brown and brownish white, sometimes amethyszircons are found so abundant on the south side of the Blue Ridge near Green river, Henderson county, that General Clingman easily obtained, in a few weeks, in 1869, one thousand pounds of crystals

78. VESUVIANITE. A mineral, resembling vesuvianite, oceurs in brownish green indistinct crystalline masses, intermixed with quartz, and associated with reddish brown garnet, in Macon county.

79. EPIDOTE. Epidote is found abundantly in North Carolina, although fine crystals are exreedingly rare. The finest specimen is from the gold washings of Rutherford county; it is strongly pleochroic, like the so-called "Puschkinite," from the auriferous sands of Katha rinenburg, in the Ural Mountains. Fine crystals have been lately obtained by Mr. Hidden, in with indistinct crystals, have been found in Gaston and Macon. In Mitchell Plains, Alexander county. Fragments of epidote in greenish crystals, also a An immense amount of pine cord wood | granular variety are frequently met with in the gold sands of Burke, McDowell

and Rutherford counties. Epidote of olive green or greyish and frequent admixture of hornblende slate (notably in Mitchell county), or diorite, ometimes forming pure masses of epidosite, as at the foot of Grandfather Mountain, head of Watauga river, Watauga county. It occurs also abundantly and conspictously, as bright green amygdules in the chloritic amygdaloidal gneisses on Watauga river. It constitutes, with a feldspar, the so-called unakyte rock, which may be seen at Marshall. Madison county, and down the French

80. ALLANITE.

Allanite is found in jet black or brown-Mr. Ed. Correll, of Concord, is here ish black slender crystals, sometimes o six and twelve inches in length, and crystalline masses in a granite vein at Balsam Gap, Buncombe county, and under similar circumstances at the Buchanan Mine, Mitchell county.

At both localities the allanite undergoes an alteration and changes into a pale brownish or brownish ye'low mineral which has not been further examthe Buchanan Mine, resembling gummite may be the so-called yttro-gummite; the The German Refermed brethren laid quantity at hand was too small and im-

SI. ZOISITE. The beautiful variety of zoisite, "thulite," has been found in slender rose-red crystals in the feldspars at the Flat Rock Mine, Mitchell county. At the Cullakence mine it is found as one of List of letters remaining in post office the products of the alteration of corunat Salisbury, N. C., for the week ending dum. Some of the pink as well as the duish grey corundum are changed into compact and cleavable columnar masses James F E Brown, Rebecca Artis, Mary of zoisite of a greyish, greenish, and

James, Sallie Jenkins, Miss Ketner, Chas found in the granular limestone near Germantown, and at Martin's quarry on

83. BIOTITE. Biotite is a constituent of many of the North Carolina. It is found only in small black or trownish black plates or scales. The localities are too numerous for mentioning any particular one. It Please say advertised when the above occurs in large plates and in very regular crystals in the mica mines of Mitchell. Haywood, Yancey and Macon.
