And remember that you may be Happy yet. Sing the blithest songs you know of, and await a better throw of Fortune's dice. Hard it may be to be merry, But you'll own that this is very

Good advice! -Somerville Journal.

The Manure Heap.

This is a good time as any to commence the process of manure-making. It should be considered that a very large part of the elements of fertility that have been removed from the soil by the crops of grain, hay and other food crops consumed by the animals of the farm, reappear in the liquid and and solid excrements. The making of domestic manure consists mainly in procuring these elements of fertility they were removed by the crops.

The growing of food crops, the saving of their manure and restoring it to the soil, is a beautiful illustration of the law of compensation and restitution. An individual particle of phosphoric acid, lime or potash may possibly make the circuit from the soil, through the grain, into the living aniparatively slow. It is the duty of the distance and huddle up together closefarmer not only to save, in the form of 13 manure, what has been removed from the soil, but to add to this recovered portion additional supplies of these elements from other sources, both from the deep recesses of the soil itself, and from sources outside the farm, as well have the power to gather nitrogen falo retrace their steps only a short disfrom the atmosphere, thus building up tance. the soil and increasing its productive-

"Tie Your Necktie, Str!"

Some genius discovered that when men reach the treatre and remove their topcoats their neckties do not present that geometrical nicety of position that all well regulated neckties ought. Even if the wearer be consciouswhich is seldom—that his tie is not as it should be, it is awkwark to pose before the mirror, if there be one, and get red in the face in a fruitless struggle to rearrange the biassed tie. The genius aforesaid has got on to all this, Being a genius, to capture an idea was to act upon it.

He sought and obtained a position as usher in one of the theatres. Then he began business. The first man whose necktie looked as if it were in search of his occipital bone, and who looked healthy enough not to be startled by the strangeness of the request, was approached.

"Tie your necktie, sir?" "What?"

"Tie your necktie, sir? It has become disarranged."

"Has it? Well, go ahead." The tie was neatly adjusted, a quarter dropped in the hand of the tver, and this began what is now quite a remunerative addition to the theatre ush

Of course the genius had imitators, All geniuses have.

You can have your necktie perpentions of growing crops, growing and lost fifty per cent., but after a little dicularly adjusted now not only at the theatres but at balls and large receptions.
