His Transformation to Savagery and Ulti-

mate Return to Civilization. In June, 1746, Jonathan Dore, a boy 12 years old, was told by his father, who was at work with other men in the field, to sit on the fence and keep a sharp lookout for Indians, who were suspected to be not far away. This was in or near Rochester, N. H. The boy sat whistling on the fence. The Indians all at once came in sight. He gave the alarm, and the men all escaped, but before he could get down from the fence the Indians seized him. His father saw him captured and carried off, but could do nothing. Eleven years afterward the Fort William Henry massacre occurred. Among the New Hampshire soldiers who es caped was a Dover man, who declared confidently that he had seen Jonathon Dore. He had often been at Mr. Dore's house and knew Jonathan well. He was suro he had not

been mistaken in his identification. When the massacre became gen eral, after the statement of the firt, the Dover man ran for the woods and was clearly pursed by: : in dien. Agreed With the Theologian. This story is teld of a formerly well known eminent divine of Boston, who was also president of a rail road. He had occasion to go out into the railroad yard one day and wit nessed the unloading of a carload of rails. The men were 1 tching them over in a careless manner, and as in | lyn Eagle. those days they were very expensive he remonstrated with the workmen.

One of the men gently told him to go to hades—the polite expression used to describe the torrid zone of hereafter for the wicked.

"Oh, shame!" said the ex-elergy man. "That's the last place you ought to send me to.

"Faix, I think you are right," re plied the workman. "There's no doubt but it will be the last place you'll go to."-Boston Telegram.

Rain Stopping Experiments.

It is singular in these days when explosions in air are thought to bring rain that no one has speken of a sixteenth century experiment to stop rain by the use of gunpowder. Benyenuto Cellini tells us in his memoirs that when Margaret of Austria entered Rome it rained heavily. "I pointed several large pieces of artillery in the direction where the clouds were thickest and whence a deluge of water was already pouring; then when I began to fire the rain stopped, and at the fourth discharge the sun shone out." -Boston Journal

Shaftesbury's Retort. When a member of the church congress at Manchester argued that the introduction of the custom of crems tion would endanger belief in fi resurrection of the dead, the refly of Lord Shaftesbury silenced any further doubt when he asked, "What, then, has become of the holy martyrs who were cremated?"-San Francisco Argonaut.

That Egyptian cotton is competing with that from the south-in the markets of New England will be news to many people in the south. The authority for the statement is the report of United States Consul Penfield at Cairo, Egypt. He says the shipping of cotton from Egypt to the United States is considered as superfluous as the sending of coal to Newcastle, but the records show that Egypt is competing in a small

way with us, not only in Europe, but at home, supplying raw cotton. and the consumption of Egyptian cotton by New England spindles has grown from nothing ten years ago to more than 40,000 large bales, equivalent to 60,000 American bales, and valued at \$3,000,000. The Egyptian cotton area, which was 863,552 acres in 1892, now equals 1,072,541, an astonishing advance. -Exchange

GREEK AND ROMAN CHURCH.

Their Separation, Its Causes and Their Present Points of Difference.

The separation of the Greek from the Roman church took place in the eleventh century after a long struggle since known as the Filioque controversy. To the article of the council of Constantinople, which declared that the Holy Ghost "proceedeth from the Father," the western church added, and the Son," and the words gradually came to be used in service. In the ninth century Pope Leo III was appealed to and commanded the disuse of the words. and a second council of Constantinople confirmed his decree, and the matter would have been allowed to rest but for the jealousy which existed between Rome and Constantinople, on account of which the former revived the use of the words. The Greek church resisted, and in 1053 Pope Leo IX excommunicated the patriarch of Constantinople and all others who refused to accept the Roman doctrine.

The patriarch, Michael Cerularius, hoping to reverse the sentence, invited legates from the pope to Constantinople to negotiate for peace. They came accordingly, but entering the church of St. Sophia they repeated the pope's sentence of excommunication, laid the sentence on the altar and returned to Rome. This took place on June 16, 105!, from which time the final separation of the east and west may be said to date. The patriarch summoned a council and in his turn pronounced excommunication against the pope, with the support of about a thousand bishops and other clergy. Attempts were several times made to effect a reconciliation, but without success.

day remains in doctrine and ceremonial almost entirely as it was at its separation. The chief points of difference from the Roman church are the omission of the filioque from the Nicene creed, and the denial of the papal supremacy. The doctrines of the Trinity and of the incarnation and life of Christ are exactly the same as those of the western church, and the Greeks follow the Romans with regard to the belief in purgatory and in the seven sacraments. They hold the Blessed Virgin and the saints in high reverence and great

importance is attached to the sacred

pictures, or icons, which abound in

their churches, houses and streets. Beyond the Nicene creed there are no doctrinal tests. The ceremonial of the Greek church is more elaborate than that of any other, and the number of services is remarkable. Sermons are almost unknown. Threefold immersion is practiced in baptism, the communion is administered to infants and in both kinds, and prayer is made standing. In other points there is little difference from the ritual of the Roman church. The secular priests are obliged to marry once, but not more than once. Monasteries and convents are very numerous, and the monks are under severe discipline. Many Christians spend their lives wandering from one monastery to another in their pilgrimage and are always hospitably received. The largest and most famous of these buildings is Troitsa, which has numbers of churches and a university within its walls.—Brook-

Bengal Peasant Proverbs.

The wisdom of the Bengal peasant cultivators finds expression in proverbs, of which a collection has been made by a Babu in the agricultural department of that province. His appreciation of the outwardly revered Brahmin betrays itself incilentally in the maxim, "Rain and inandation disappear when south winds blow, like the Brahmin as soon as he has received his fee.

Other Bengal rural aphorisms are: "Have the land which receives the washings of the village, and the bullock which walks fast, and marry the girl whose mother is good." "He who works in the field himself with the laborers gets the full profit; he who, being unable to work himself, supervises the workings of the laborers, gets half the profit; he who orders the laborers from his house does not get enough to eat."-London News.

A Valuable Violin.

In a small town some years ago a jeweler received in trade a violin, and not caring for that instrument, but having a customer for an accordion, he took the violin to New York and asked if it could be exchanged for an accordion. The dealer looked at it a few minutes, then betrayed excitement and was honest enough to say that the violin was a genuine Cremona and revealed the parchment which indicated its make and the date of it, and he offered to this jeweler instead of an accordion a grand piano in exchange for it. What the history of the violin was before it came into the jeweler's hands no one could tell.-New York Letter in Philadelphia Press.

A Battle Royal. Sporting writers and telegraph editors used "battle royal" in half the newspapers of the country when telling of the Vigilant-Valkyrie race. There is no such thing as a battle royal between two contestants. The term is exact and technical. A battle royal is a fight of many, in which every one is against every other one, and the best wins. - Exchange.

A Wonderful Egg.

A peculiar egg has been brought to London by a Mr. J. Proctor of Tamatave, in Madagascar. It was discovered by some natives about 20 miles to the southward of St. Augustine's bay, on the southwest coast of Madagascar. It was floating on the calm sea, within 20 yards of the beach, and is supposed to have been washed away with the foreshore, which consists of sandhills, after a hurricane in the early part of the year. The childlike longshoreman of the antipodes, opining that the egg had a value, showed the unusual piece of flotsam about, and it thus came into the hands of Mr. Proctor.

The egg, which is whity brown in color and unbroken, is a fine specimen 334 by 28 inches, and an even higher value is placed upon it than upon the egg of the great auk, which lived within the memory of man. The brobdingnagian proportions of the egg are better demonstrated by comparison with the eggs of the ostrich and crocodile. An ostrich egg is about 17 by 15 inches, and the contents of six such are only equal to one egg of the epyornis. The measurements of the egg of the crocodile are normally 9 by 61 inches. It would require the contents of 161 emu's eggs to equal the contents of this great egg, or 148 eggs of the homely fowl or 30,000 of the humming bird. —London Collector.

Edison on Ocean Rapid Transit. Edison declares that rapid transit through the water is only a question of reducing the friction between the sides of the ship and the water. What makes the resistance that the ship's screw must overcome is the fact that the ship drags a lot of water along with her. To illustrate this: Say the vessel is going 20 miles an hour; two feet from her sidethe water is going 10 miles an hour, four feet away 5 miles an hour, eight, feet away 2 miles an hour, nine feet off 1 mile an hour and so on in diminishis dragging along with her. That is what the engine has got to do -not force the ship through the water, but carry the water along. This all comes from the fact that the water sticks, as it were, to the of the

The Greek church of the present will be discovered of le string the Iron and Lithia Springs Co., met on friction between the sacci of the vessel and the occan. The result might possibly be achieved, he thinks, by forcing some cheap oil through the pores of the sides of the si ip under across the Atlantic on a bed of oil like greased lightning, as it were.

Buying a Horse.

No sensible man will buy a horse pects to do him good service, without submitting to a qualified veterinary surgeon, says a writer in a foreign exchange. Many an unprofessional man has a good eye for a horse, but he knows little or nothing of its structure and anatomy compared with the trained veterinarian. Moreover, the amateur judge of a horse is apt to fly to certain points where he thinks he may detect something and overlook others. The veterinary surgeon who is examining horses almost every day not only brings his scientific knowledge to bear, but conducts his examination in a systematic manner, going all over the before he has done with him. It mere be manifest unsoundness, it will be discovered and pointed out, but it is in the discovery and indication of incipient unsoundness that the training and practice of the veterinarian are of supreme value.—Springfield Home-

Misinterpreted.

It was at an afternoon tea, and he was young-as was shown by the fact of his attending such a function. He kept glancing nervously at her from time to time and hovered about her continually-marks of favor which she thought she could interpret. Several times it was evident that he wished to speak to her, but the other guests interrupted him. Finally, when she was about to go, he rushed up to her, coloring violently. She graciously helped him out. "Is there something you wish to

say to me?" she murmured. "Yes-yes. I hope you'll pardon my saying it, but you have a streak of mustard on your cheek."-Ex-

Didn't Feaze Mr. White. One day, while his apparatus for deep sea soundings by means of steel pianoforte wire was being constructed, Lord Kelvin entered Mr. White's shop in Glasgow along with the great Dr. Joule, celebrated for his determination of the mechanical equivalent of heat. Joule's attention was called to a bundle of the pianoforte wire lying in the shop, and Thomson explained that he intended it for "sounding purposes." "What note?" innocently inquired Joule, and was promptly answered, "The deep C."-Chicago Post.

Novel Insurance. The latest development of the insurance business is interesting. You can buy suspenders which entitle your next of kin to \$500 if you are killed while wearing them, and there are also hats which entitle your heirs to a similar amount if you are found dead with one on your head. If the hat is found by your side, both it and the insurance are "off."-Exchange.

Sock and Buskin.

The expression "sock and buskin," which literally means comedy and tragedy, found its origin in the "soccus," the Latin name of the low shoe worn by the ancient comic actors, and the buskin, a contraction of the French word "brossequin," remotely derived from the Greek "bursa," a hide or high soled shoe worn by the ancient tragedians to increase their height. The soccus reached to the ankle only, whereas the buskin extended to the knee .--

obtained by a sale of bonds some time ago has all been drawn out and exported. It will be remembered that when the Treasury was losing its gold a year ago, the President called Congress together in extra session to repeal the Sherman act, on the supposition that the purchase of silver had something to do in some mysterious way with the gold exports. Well, the act was repealed: and later the bonds were sold and more gold obtained; but now the gold has gone and nothing apparently remains but to go over the same process. Perhaps there is some other Act which in some

mysterious way may be causing the

gold to be exported, and if so Con-

gress ought to be asked to repeal it;

and then more gold might be bought

with more bonds for the exporters

to send away?

The gold which the government

The duty of the Treasury it seems is to get in a stock of the vellow metal for the Rothschilds and for the great banks of Europe to draw upon at their pleasure. The banks in New York have more gold, it is said, than ever before in recent years; but exporters do not get their gold from that source; they make the U. S. Treasury supply them. The New York banks, if applied to, would simply sav-Here is a legal tender note which is all we will give you; here is a lot of silver which is legal tender; but we will not part with our gold. The Secretary of the Treasury has been instructed by Congress to use his discretion in the same way; but the Secretary addicates his functions as a factor in the case, and uses no discretion. ing ratio. All this water the vessel He says to the exporter we have gold and silver, use your discretion -and we will have no discretion in the matter. Your discretion shall be

The Wilkesboro News says: The Edison believes that some means members of the Brushy Mountain the grounds last Thursday and selected lots on which to erect cottages. Work will be commenced at once and several nice cottages will the water line. She would then slip soon be in course of erection, while the grounds will be developed. This bids fair to become one of the most desirable summer resorts in Western North Carolina. The Bank of England does not do that: nor the Bank of France; nor any other bank, either in this country or abroad. Hence the treasury always is in a bad box .- News-Observer-Chronicle.

According Million of Coul for discourse Pren, sury Figures,

Washington, June 11 The engagement to-day of \$1,000,000 in gold for export from New York to-morrow, reduces the gold reserve in the Treasury to \$68,400,000. When Secretary Carlisle, on January 17th, last, issued his circular letter invit ing bids for \$50,000,000 of bonds, the gold reserve stood at \$58,971,-000. The "ten days" Treasury statement issued to-day shows that the receipts, from customs at New York so far this mounth have aggregated only \$1,605,035, an amount less than for any ten days since 1893, or prior years for ten years back, it is believed, and less by \$1,000,000 than for the corresponding period of June, 1893. Of this amount only 0.1 per cent. was paid in gold, and 86.8 per cent. in silver certificates. So far this month the expenditures have exceeded the receipts by \$2,200,000, and for the fiscal year \$73,200,000.

proving a rather perplexing problem that in eastern Washington, Oregon, dollars will now buy a good mustang in that part of the country. Meancause of the depression in the horse trade is largely the employment of electricity as a motive power in every part of the country, and no market can be assured in the future except for horses with a thoroughbred strain in them. It is now proposed literally to kill off by thousands the mongrel herds of the so illegibly that a possible mistake Northwest, and convert them into is hidden. fertilizing and similar compounds. With this end in view a company has been organized at Portland, Ore., and a site for the abattoir has been secured. It is proposed by the ncorporators to bring all the horses purchased to their abattoirs, and there kill them by a painless method. The flesh will then be rendered of all its fat, and the residue, with the bones and hoofs, will be made into a fertilizer. The hides, that have always a market value, will be carefully removed and salted, the hair being shaved off, and, with the mane and tail, used for the stuffing of mattresses and upholstery work. A portion of the meat will also be com pressed for chilken food, and no part of the hide, hair, flesh, or bone that can be put to any practical use will
