PHEPAKED CITRATE OF MAGNESIA in agreeable Refrigerant and Laxative. This preparation is extensively used in the form of Saintion or liquid Citrate, and has given very general satisfaction. Frequent application or a preparation in the form of rowners, of similar nature and preparties, have suggested the advantages that might result from its introduction in that form, especially hen the bulk and weight of the liquid Citrate, (an article an justly esteemed both by physicians and in private families wherever it has been used.) would interfere with its being sent to great distances; it is destitute of bitterness, and by its pleasant accidity of taste and its effervessing character, is rendered a very agreeable and refreshing drink, at the same time, that it is a good substitute for Epsom salts or other saline pargatives.
