OUTLINES.

No authorized denial of rumors of receiver for the Richmond Terminal eystem could be obtained yesterday in New York. - The cotton pickers strike is said to have been ordered only for Texas and South Carolina; but it failed to appear anywhere yesterday. -The report that Prince Bismarck had an appopletic attack is denied. - Fifty persons were drowned by the sinking of an Italian steamship off Cape Colona. The night express train on the Georgia Central was held up five miles from Savannah by two men, who robbed the express car of several money packages. - Specie exports from New York last week amount to \$717,-725; and imports \$65,365. ___ J D. Austin, a merchant residing near Salisbury, N. C., is in jail at Richmond. Va., for raising a check of \$30 to \$3,000 -New York markets: Money easy: no loans made; closing offered at 21/4 per cent.; cotton quiet; middling uplands 8% cents; middling Orleans 9 3-16 cents; Southern flour steady. Wheat opened dull and weak; No. 2 red, \$1.01 at elevator; corn dull and nominal; No. 2, 72@ 74 cents at elevator; rosin dull but steady; spirits turpentine quiet and

Mr. McKinley has been assuring an interviewer that "Ohio's majority will be all right this fall." This will be probably so, as Gov. Campbell and other Democrats feel confident that it will be Democratic.

Fire broke out in a house adjoining a museum in New York the other night, when the "Fiji Prince" aroused from his slumbers was heard to exclaim, in accent somewhat peculiar for a Fiji Prince, "be jabers, b'ys, let me out o' this.

There is said to be a man in Illinois who has for some time been entertaining a phenomenal case of dropsy, from whom the physicians have drawn 3,164 pounds of water. He might hire himself out to some small town as a reservoir.

"How to vote" is the title of a story running in some of the Western papers. It seems strange that men would devote their time to writing stories like that when every honest and patriotic citizen knows that the right way to vote is to vote the Democratic ticket.

Treasurer O'Brien, of the Catholic Knights of America, who appears to be missing, as is also \$30,000 of the the funds of the society, may have been taking some exercise in the Chicago grain pit. It is a pity that fiduciary agents will do that way, but they sometimes will.

At a recent trades' union congress in England the delegates were willing to "toast the queen," but drew the line on the "royal family." As a woman they admire Victoria, and as a queen they think they can stand her the balance of her natural life. But they haven't any use for the "royal family," represented by baccarat Wales, and would much rather roast than "toast" that.

With cholera in Asia, influenza and impending starvation in Russia, earthquakes in San Salvador, a big rebellion on foot in China, and the greatest powers in Europe getting ready for a racket that will everlasting shake things over there, we may consider ourselves reasonably well off over here, even if we do have to scuffle along with the remains of the Republican party.

Part of the distress which prevails in Russia is attributed to the fact that the Jews from whom the farmers were in the habit of borrowing money to pay for harvesting the crops, on account of the persecution to which they have been subjected either could not or would not lend money this year, and as a consequence much of the grain crop wen unharvested and rotted in the fields.

Mrs. Cantrell, of Kentucky, who is one of the board of lady managers for the World's Fair, seems to be a lady of observation. They had a vote the other day on the question as to whether the Fair should be kept open on Sunday, and she afterwards remarked that there was one thing that struck her as strange and that was that so many of the ladies who had voted to close it slept the day before (Sunday) until noon and then went yachting in the after-

> judge from the figures. - The New York futures market yesterday closed at an advance of 2 to

4 points on Friday's closing figures. - If Wilmington wishes to make good her claim to being one of the best cotton markets in the South she will

have to revise her quotations. - Wilmington cotton receipts yesterday 862 bales. Same day last year 1,166 bales. Price for middling yesterday 7%. Same day last year 9%.

- The Boston Advertiser declares that even if the price of cotton should fail to advance with that of other farm products, it is believed that the Southern farmers will find themselves in a more prosperous condition at the end of the present season than for many years

- The Savannah News says: Evidently the government reports did not estimate the damage to the crop by rains, drought and other causes at anything like the reports received generally by the cotton exchange. There is certainly no danger of the country producing another seven million-and-a-half crop this year and the estimate that the crop of '91 will closely approximate that of

'89 is doubtless a fair one. - Henry Clews, in their special circular dated Sept. 12th, says: The reports of damage from worms to the cotton crop have undoubtedly been grossly magnified; for that kind of injury is now so largely under immediate control by the planter that it is no longer the source of danger it once was. Besides, even supposing that a loss of a quarter million of bales were to arise from this cause, it is more likely, in view of the present large stocks, that it would increase the total value of the crop than that it would diminish it.

- The N. Y. Bulletin says: "It is noticeable that in comparing officia statements of last year with the present season, the deterioration from the highest plane to date is just about the same, or say 6 points, and that in 1890 the Bureau dropped from 95.5 in September to 80.00 in October. The present run of crop news is generally cheerful and improving it anything, with the feeling that serious danger has passed up to the frost period, while the swelling run of receipts indicates that the marketing of the crop is commencing with greater

BRICK PAVEMENTS.

The Durability of Brick Pavements-A. Treatise by an Elminent Civil Engineer -Something of Real Interest to the People of Wilmington.

A very interesting pamphlet on the durability of brick pavements, by Prof. Ira Baker, has been received at the STAR office, The following synopsis of a portion of the treatise will be read with interest:

The writer is professor of civil engineering in the University of Illinois. He calls attention to the fact that brick has been exclusively used in pavements for the smaller cities of the Mississippi valley. Its use is growing elsewhere. The good qualities of brick are generaffy recognized. Bricks make practically a noiseless payement; they fit so closely that there are no inter-spaces to retain filth and breed disease; a brick pavement is easily cleaned; it is easily repaired; bricks can be made of any size and shape for gutters, slopes, etc., without much, if any, additional cost; brick pavements are smooth, and reduce the tractive power and wear and tear of vehicles almost to a minimum. Bricks do not polish under wear, and hence afford a good foothold to horses; they are not affected appreciably by moisture, frost or fire. The first cost of a brick pavement is less than any good pavement, hence on the score of health, comfort and cost brick pavements have much to commend them. The only debatable question has been that of economy or cost of maintenance. In twenty cities of this country which have a population of 100,000 each, the pavements

durable pavement. For two years Pro-

fessor Baker has experimented upon

brick, having tested the brick in actual

service in pavement. He reports that the

result in every as extremely way satis-

factory. Professor Baker experiments

upon bricks in order to develop their

transverse strength, absorptive power

and crushing strength. The average

cart load which passes over brick pave-

ments is 1,000 pounds to the square inch.

The power to crush a brick is 10,000

pounds to the square inch. The best

quality in paving material is its resis-

tance to abrasion and impact. Profes-

sor Baker shows that a brick loses less

in this kind of wear and tear than gran-

ite. Paving brick, Professor Baker says,

should consist of the best quality of

sound, hard-burned brick, made

and burned especially for street

paving purposes and shall stand

reasonable tests as to durability and fit-

ness. Brick should be square-edged

and straight, free from cracks and other

defects, of uniform size and of a quality

to be approved by the authorities. The

principal danger, Professor Baker

thinks, in using brick, is that home

made brick and local influence some-

times come in to unduly influence

the letting out of contracts. Due re-

gard must be had to the quality of

brick, as it is bad business policy to

allow the public to delude itself as to

the service of brick. The clay in the

brick should contain no limestone, for

when burned this is turned to caustic

lime, and with water this lime slakes

and disintegrates the brick. There

should not be lime enough in the

brick to cause cracks when soaked

in water five or ten days. Professor

Baker has seen brick which has been

used as pavement thirty-nine months,

and says that the only effect has been to

wear off the corners and edges. It takes

15.250 tons per foot of width to cause

Brick can be burned too hard. They

should not be too thoroughly vitrilized,

for they become brittle and unfit for

use. The chief wear upon brick is from

wheels, horses' feet and the effect of

frost. In thirty-nine months a daily

traffic of fifty-three tons wore off 1 per

cent. of brick pavement. Such a pave-

ment ought to last fifty years at that

rate. In a series of experiments at St.

Louis, showing the artificial tonnage per

foot of width required to wear 1 per

cent. from the several materials, brick

and Belgian block seem to divide the

honors-one probably is as good as the

other. Putting brick durability at 50,-

000 tons, asphaltum shows the same

wear under 16,000 tons, wood blocks un-

der 13,000 tons, limestone under 5,000

Professor Baker's work is an impor-

tant investigation in a new direction and

The negro man Elisha Brown alias

"Goss," who was arrested by detective

sent to jail.

the loss of 1 per cent. of brick.

its firmness. represent an investment of \$250. 000,000-a trifle over \$40 per capita for the inhabitants. Brick has been too recently employed as pavement to judge accurately of its durability. From the tests to which Professor Baker has submitted the brick of Illinois, however, it seems to have good prospect of being used as a cheap and

> In this immediate locality the general sentiment seems to be that the present season will be a prosperous one. The rice crop promises to be larger, and the indications are that it will be harvested in excellent condition. Cotton is a little backward, but the receipts will soon be enormous, and will put a good deal of money into circulation, Both the wholesale and the retail merchants recognize a .marked improvement in trade, and are anticipating a very pros-

perous season. And in the interrior towns a better condition of affairs is noticeable. The merchants feel that money is circulating much more freely, and consequently they are encouraged to be more liberal in their purchases. What has been needed for months more than anything else is confidence, and now that seems to be in a fair way of being fully restored. With confidence will come money, and with money unusual activity in all departments of business and industry.

For rates from other points inquire of agents. Tickets on sale September 28th to October 3rd. Good to

Jail Record.

A BRIGHTER PROSPECT.

The Outlook Favorable-Businees Men Speak More Hopefully-Money Will Soon be Essier in the South.

The Savannah News is another paper that gives no encouragement to croakers. It speaks thus hopefully of the business prospect:

There is a much better feeling in business circles than there was a week or two ago. And this feeling is becoming more apparent every day. Indeed, the outlook throughout the country for a healthy revival in trade, and in enterprises of one kind and another, is extremely encouraging. Business men speak more hopefully of the future, and make contracts with greater confidence. They act as it they felt that a period of

great business prosperity was at hand. And there are good reasons for this condition of affairs. In the West an extraordinarily large wheat crop has just been harvested, and owing to crop failures in Russia, good prices are being obtained for it. In the South the cotton crop will be a good one, notwithstanding the damage it has suffered in localities, and the prospect is that it will command better prices as the season advances. There has been an advance of a cent a pound in cotton since the opening of the season, and a still further advance in the very near future is probable. It is true that there was a little falling off in the price yesterday, owing to the favorable report of the condition of the crop sent out by the agricultural department, but the market, it is safe to say, will soon regain

All of these things help to make those who are engaged in business bolder in their undertakings, and cause the strong boxes in which money has been hoarded to be unlocked. Money is now abundant in New York and it will soon be much easier to get in all the other cities and towns of the country. With plenty of money in circulation, there will be unusual activity in trade and in the promotion of industrial enterprises.

WEATHER AND CROPS.

Report of the North Carolina Experiment Station-Decidedly Unfavorable as to Condition of Cotton,

The reports of correspondents of the Weekly Weather Crop Bulletin, issued by the North Carolina Experiment Station and State Weather Service, for the week ending Friday, September 11th, show a still further decrease in the percentage condition of the staple crops, although the weather has not been decidedly unfavorable during the past week. Very little rain has fallen, which was favorable for all kinds of farm work, The first part of the week was slightly above the normal in temperature, the latter part decidedly below the average with unfavorable effect on cotton and tobacco, which both deteriorated since last report. The condition of cotton is probable as low as it has been at any time this season. Shedding continues and rust is doing considerable damage, opening very slowly and picking as yet only going on at a few places. A correspondent at Dunn, Harnett county, reports first new bale, sold on September 8th; cotton is in the best condition in the Southern portion of the Central District, in Union, Richmond, Harnett and perhaps a few other counties where its condition is reported as high as 96 per cent. An early frost would inflict serious injury to the cotton crop. Tobacco has been considerably damaged by previous rains and is not curing so well. Curings will be light. In many counties the crop is reported poor. The corn corn crop has been the stand-by of the farmers this year. Seeding of oats and wheat is in progress. The prospects are for more rain the early part of the week, becoming slightly warmer. The present condition of crops is as follows.

Eastern District-Cotton 67: corn 80: tobacco 78. Central Disctrict-Cotton 77; corn 91;

obacco 81. Western District-Cotton 72; corn 90; tobacco 80. For the State-Cotton 72; corn 87; bacco 80

The Gulf Cyclonic Disturbance.

The entire country east of the Mississippi had for the past week prior to Friday last, been blest with what in meteorological parlance is termed anticyclonic conditions, to wit: pleasantly cool and dry weather and pressure above normal. This condition usually precedes cyclonic disturbances, or in other words might be termed "a weather breeder." The high pressure of 30.4 shown on the weather charts as moving slowly across the country, was on Friday central in the Middle Atlantic States, from which it began a rapid retreat towards the northeast.

This movement allowed the approach of warm and humid air from the Gulf, whose moisture was precipitated in heavy rains on the South Atlantic coast. This rapid atmospheric movement also generated a cyclone disturbance in the Gulf, which the Weather Bureau warned us night before last was central near Pensacola. Yesterday's advices show that the storm had not generated to such an extent as to be of danger to this coast, but the Weather Bureau called for special observations from coast stations with a view to issuing timely warnings if deemed necessary. Up to time of our going to press the worst effects here were driving rains and blustering northeast winds.

The Acme of Minstrelsey.

The following endorsement is but one of the many this magnificent attraction secures wherever they play:

"There may be better minstrels, better singers and more carefully arranged and pleasure-giving entertainments than Barlow Brothers' company contributes, but if so they have avoided San Francisco this season. From the beginning of the first part until the close there was not one joke that was poor, nor a song too old or indifferent to be encored riotously, not an ill-selected feature, and not apparently a dissatisfied individual in the audience that numbered nearly 3,000 people, Messrs. Barlow Brothers cracked a few jokes in a manner second to none and then sang their original topical songs which were very funny! Of the other features much that is praiseworthy can be said. Larry Mc-Avoy made a great hit, but the audience fully as much appreciated the solos of Clarence Rummell, Lon Hudson and Wallace Howard, and fairly went wild over the singing of A. J. La Bord, whose familiar tenor was heard in 'I have Recalled those Angry Words' and 'I Can't Believe her Faithless.' Ferry also won marked favor in his grotesque frog act, winning three encores. Mr. Archie Royer, Messrs. Thomson and Duclos and the entire company in 'Cinderella Jackson's Masquerade, were at their best. The three Leon Brothers contributed a novel and interesting gymnastic act. The entertainment closed with enthusiastic applause.-San Fran-

Weather Forecasts.

cisco Evening Bulletin.

The following are the weather torecasts for to-day:

For Georgia-Local rains, warmer, except on the coast stationary temperature, northwesterly winds.

For Virginia-Local rains, warmer in the southern and stationary temperature in the northern portion, variable winds. For North Carolina-Local rains, northeasterly winds, slightly warmer in the western and stationary temperature in the eastern portion.

For South Carolina-Local showers, warmer in the northwest and stationary temperature in the southeast portion, northeasterly winds.
